Company Code: 688777 Company Abbreviation: SUPCON

# **Supcon Technology Corporation Semi-annual Report 2025**

## **Important Tips**

The Board of Directors, the Board of Supervisors and the directors, supervisors and senior management of the Company guarantee that the contents of the semi-annual report are true, accurate, complete, free from false records, misleading statements or material omissions, and bear individual and joint legal liability.

### **Material Risk Warnings**

The Company has detailed in this report the various risks it may face in the course of its operations and the measures to be taken. Please refer to the "Risk Factors" section of "Management Discussion and Analysis" in Section 3 of this report. Investors should be aware of investment risks.

All directors of the Company are present at the board meeting.

This semi-annual report has not been audited.

CUI SHAN, the head of the company, Fang Yongsheng, the person in charge of accounting work, and MAO Feibo, the head of the accounting department (accounting supervisor), declare: They guarantee the truthfulness, accuracy and completeness of the financial reports in the semi-annual report.

The board of directors has approved the profit distribution plan for the reporting period or the plan for converting the reserve fund into share capital

no

Whether there are important matters such as special arrangements for corporate governance Not applicable

#### Risk statements of forward-looking statements

Forward-looking statements regarding the company's future plans, development strategies, etc. in this report do not constitute substantive commitments by the company to investors. Investors should be aware of investment risks.

Is there any non-operating occupation of funds by the controlling shareholder and other related parties

no

Is there any situation where guarantees are provided externally in violation of the prescribed decision-making procedures

no

Is there a situation where more than half of the directors cannot guarantee the authenticity, accuracy and completeness of the semi-annual report disclosed by the company

no

## **Others**

Not applicable

FINANCIAL REPORTING
Financial statements bearing the signatures and seals of the company's
responsible person, the person in charge of accounting work, and the person
in charge of the accounting institution (accounting supervisor).
Original copies of all company documents and announcements that were publicly disclosed on the website designated by the China Securities
Regulatory Commission during the reporting period.

# **Chapter 1 Interpretation**

In this report, unless the context otherwise indicates, the following terms have the following meanings:

Definitions of Commonly Used Words					
Company, our company, Refers Supcon Technology Corporation					
SUPCON Technology	to the	Supcon Technology Corporation			
	Refers	Sinopec Corporation and its subsidiaries			
Sinopec	to the	Smopee Corporation and its substitutaties			
	Refers	China National Petroleum Corporation and its			
CNPC	to the	china National Petroleum Corporation and its subsidiaries			
<del> </del>		Hangzhou Yuancheng Enterprise Management			
Hangzhou Yuancheng	Refers	Partnership (Limited Partnership), a shareholder of the			
Trangzhoù Tuancheng	to the	* '			
	Refers	company Sinopec Group Capital Co., LTD., Company			
Sinopec Capital	to the	Shareholder Capital Co., LTD., Company			
	Refers				
Lenovo Beijing		Lenovo (Beijing) Co., LTD., shareholder of the			
	to the	Changhai Tanving Investment Portnership (Limited			
Tan Ying, Shanghai	Refers	Shanghai Tanying Investment Partnership (Limited			
	to the	Partnership), shareholder of the company			
	D - C	Lanxi Puhua Yihui Investment Partnership (Limited			
Lanxi Yihui	Refers	Partnership) (formerly known as Lanxi Yihui			
	to the	Investment Partnership (Limited Partnership)),			
	D.C	shareholder of the company			
Citibank	Refers	Citibank (China) Limited, Shareholder of the company			
	to the	An industrial of the state of t			
		An industry that uses techniques such as chemical			
D	Refers	reaction, separation, or mixing to create new products,			
Process industry	to the	improve existing products, or deal with waste, such as			
		chemicals, petrochemicals, power, pharmaceuticals,			
		metallurgy, building materials, etc			
		The general term for advanced manufacturing			
		processes, systems and models that are based on the			
		new generation of information technology, run through			
		all aspects of manufacturing activities such as design,			
		production, management and service, and have			
		functions such as deep self-perception of information,			
G	Refers	intelligent optimization and self-decision-making, and			
Smart manufacturing	to the	precise control and self-execution. It is characterized			
		by smart factories as the carrier, intelligence of key			
		manufacturing links as the core, end-to-end data flow			
		as the foundation, and network interconnection as the			
		support, which can effectively shorten the product			
		development cycle, reduce operating costs, improve			
		production efficiency, enhance product quality, and			
		reduce resource and energy consumption			
		Devices that use automation control technology to			
	D 2	automatically regulate and control the production			
Automated control system	Refers	process can generally be classified into distributed			
	to the	control systems (DCS, also known as distributed			
		control systems), safety instrumented systems (SIS),			
		networked hybrid control systems (PLC), etc			
OMG	Refers	Operation Management & Control System, intelligent			
OMC	to the	operation management & control system. It is a new			
		generation of system architecture for highly			

		autonomous operation of process industry equipment
		proposed by the company in combination with customer demands and the development of new-generation information technology. It goes beyond the capabilities of traditional distributed control systems to achieve integration of production operation management and control. At the same time, with an open architecture, it integrates a vast amount of industry knowledge and experience from manufacturers, users, etc. more conveniently and effectively. It represents a major innovation and upgrade in the process industry from traditional automation to intelligent autonomous operation
DCS	Refers to the	Distributed Control System, also known as distributed control system. An industrial automation control system that is based on controllers and field devices, gathers relevant process signals into the system, and is monitored or controlled by the operation station. It is characterized by decentralized control, centralized operation, and hierarchical management
SIS	Refers to the	Safety Instrumented System. A system consisting of sensors, logic controllers, and final components that can perform one or more safety functions, mainly the alarm and interlock parts in a factory control system, which perform alarm actions or regulation or shutdown control based on the results detected in the control system
Networked hybrid control system	Refers to the	A control system built on a Universal Communication Protocol (UCP) network that ADAPTS to decentralized on-site usage, meets the control requirements of continuous or semi-continuous industrial processes and large infrastructure sites, integrates multiple control functions, visualization, networking and information technology, and provides a fully integrated solution for various applications
CCS	Refers to the	Compressor Control System. Composed of a stable and reliable hardware platform and a dedicated optimized control software package, it is used to perform parameter display, alarm, control, regulation and interlock logic protection of the compressor unit, achieve anti-surge control, performance regulation and speed regulation of the compressor, and ensure the safe and stable operation of the compressor unit
SCADA	Refers to the	Supervisory Control And Data Acquisition systems. A computer-based production process control and scheduling automation system that can monitor and control the operating equipment on the site
Industrial software	Refers to the	A series of software based on an automated control system that addresses coordination and optimization issues in production planning management and actual production control
APEX	Refers to the	Advanced Process Engineering Expert, Process Simulation and Design Platform for Process Industry. It is a general-purpose process simulation software that performs process simulation and prediction by calculating and describing the process, thereby providing guidance for engineering design, production

		operation, and facility modification to achieve the goals of safe production and cost reduction and efficiency improvement. Based on APEX, it can precisely describe the actual production process of the factory and predict future production operations, assisting in decision-making optimization throughout the entire life cycle of the factory.
MES	Refers to the	Manufacturing Execution System. An information management system for the entire process from production planning to production scheduling, organization, execution, control, until the production of qualified products
Instruments and meters	Refers to the	Instruments installed in industrial production sites for measuring or controlling process parameters such as pressure, flow, temperature, material/level, including transmitters, actuators, and other detection instruments
Control valves	Refers to the	A control device in an industrial process control system that regulates the flow of a fluid, also known as a control valve. Process parameters such as pressure, temperature, flow rate and liquid level of the fluid can be regulated by controlling the fluid flow rate
Pressure transmitter	Refers to the	A device that uses a pressure sensing element to convert the physical pressure parameters of a gas, liquid, etc. sensed into a standard electrical signal (such as 4-20mA) or digital communication (such as Modbus-RTU protocol) to supply secondary instruments such as indicator alarm instruments, recorders, control systems, etc. for measurement, indication, and process regulation
Safety barrier	Refers to the	The safety interface of an intrinsically safe circuit, also known as a safety retainer. It can transfer electrical signals bidirectionally between the safety zone and the hazard zone, and can limit the energy transfer from the safety zone to the hazard zone caused by a fault
5T	Refers to the	5T technology, first proposed by the company, is aimed at major industrial problems and important demands. Based on Automation Technology (AT), Information Technology (IT), Process Technology (PT), Operation technology (OT) A Technology that deeply integrates Technology and Equipment Technology
EPA	Refers to the	Ethernet for Plant Automation. A new open network communication platform for communication between industrial field devices, created by applying mainstream technologies in the field of communication to industrial control systems
Fieldbus	Refers to the	A fully digital, two-way, multi-station underlying data communication system used in the field of automation to connect field devices with automation systems
HART	Refers to the	Highway Addressable Remote Transducer, an open communication protocol for high-speed access to addressable remote sensors. Introduced by the American company Rosemount, it enables digital signal communication over analog signal transmission lines and is a transitional product from analog systems to digital systems

FF	Refers to the	Foundation Fieldbus, Foundation fieldbus. Introduced by the Fieldbus Foundation of the United States, based on the ISO/OSI open systems interconnection model, it takes the physical layer, data link layer, application layer as the corresponding layers of the FF communication model, and adds the user layer on top of the application layer
Profibus	Refers to the	Fieldbuses based on German standards (DIN19245) and European standards (EN50170), introduced by German Siemens, include Profibus-FMS, Profibus-DP and Profibus-PA, which are respectively applicable to different automation fields
ARC	Refers to the	ARC Advisory Group. A consulting firm focused on the industrial sector, providing clients with market, technology, operations and strategic advisory services
Rui Industry	Refers to the	Beijing Borui Dejia Information Service Co., LTD., a consulting firm specializing in industrial (B2B) market research, with particular expertise in automation, power transmission and distribution, new energy, buildings, medical devices, and general devices
Industrial Control Network	Refers to the	Industrial Control Network (Beijing) Information Technology Co., LTD., a consulting firm in the field of industrial control, provides industry users with comprehensive information on manufacturers, products, technologies, applications, etc. in the industry
SIL Certification	Refers to the	Safety Integrity Level certification. Certification for safety integrity level of safety equipment, including hardware reliability calculation and assessment, software assessment, environmental testing, electromagnetic compatibility testing, etc
The Companies Act	Refers to the	"Company Law of the People's Republic of China"
Securities Law	Refers to the	Securities Law of the People's Republic of China
"Articles of Association"	Refers to the	The current articles of association of the company in effect
China Securities Regulatory Commission	Refers to the	China Securities Regulatory Commission
Shanghai Stock Exchange	Refers to the	Shanghai Stock Exchange
MIIT	Refers to the	Ministry of Industry and Information Technology of the People's Republic of China
General Administration of Customs	Refers to the	General Administration of Customs of the People's Republic of China
Yuan, ten thousand yuan, hundred million yuan	Refers to the	RMB yuan, RMB ten thousand yuan, RMB billion yuan
Reporting period	Refers to the	January 1 to June 30, 2025

# Key accounting data and financial indicators of the company

# (I) Key accounting data

Unit: Yuan Currency: Renminbi

			itelicy. Reminioi
Main accounting data	The reporting period (January-June)	The same period of the previous year	Increase or decrease in the reporting period compared with the same period of the previous year (%)
Operating income	3,830,244,462.48	4,252,171,379.80	-9.92
Total profit	377,427,640.98	558,369,934.44	-32.41
Net profit attributable to shareholders of the listed company	354,082,592.15	516,629,098.69	-31.46
Net profit attributable to shareholders of a listed company after deducting non-recurring gains and losses	288,729,507.41	472,223,046.28	-38.86
Net cash flows from operating activities	-559,432,681.54	-419,927,510.36	Not applicable
	End of this reporting period	At the end of the previous year	Increase or decrease (%) at the end of this reporting period compared to the end of the previous year
Net assets attributable to shareholders of the listed company	10,136,102,102.99	10,308,609,923.13	-1.67
Total assets	17,783,327,111.06	18,316,483,373.52	-2.91

# (II) Key financial indicators

Key Financial indicators	Reporting period (January-June)	The same period of the previous year	Increase or decrease in the reporting
--------------------------	------------------------------------	--------------------------------------	---------------------------------------

			period compared with the same period of the previous year (%)
Basic earnings per share (yuan/share)	0.45	0.65	-30.77
Diluted earnings per share (yuan/share)	0.45	0.65	-30.77
Basic earnings per share after deducting non-recurring gains and losses (yuan/share)	0.37	0.60	-38.33
Weighted average return on net assets (%)	3.40	5.18	Decrease by 1.78 percentage points
Weighted average return on net assets after deducting non-recurring gains and losses (%)	2.78	4.73	Decrease by 1.95 percentage points
The proportion of R&D investment to operating income (%)	10.96	10.45	Increase by 0.51 percentage points

Explanation of the company's key accounting data and financial indicators √适用 □不适用

- 1. During the reporting period, the company 's total profit, net profit attributable to shareholders of the listed company, and net profit attributable to shareholders of the listed company after deducting non-recurring gains and losses decreased by 32.41%, 31.46%, and 38.86% respectively compared with the same period of the previous year. The main reasons are: (1) Affected by industry competition, the company 's main business income decreased compared with the same period last year during the reporting period; (2) Bank wealth management and interest income decreased year-on-year and exchange losses increased year-on-year.
- 2. During the reporting period, the company's foreign exchange loss was 13.3959 million yuan, compared with 3.0057 million yuan in the same period last year; Bank wealth management and interest income for the current period was 73.5455 million yuan, compared with 123.3723 million yuan in the same period last year. Net profit attributable to shareholders of the listed company after excluding the above effects was 293.9329 million yuan, down 25.82% year-on-year.
- 3. Net cash flows from operating activities for the reporting period were -559,432,700 yuan, down from the same period of the previous year, mainly due to increased payments for the purchase of raw materials by the company.
- 4 During the reporting period, basic earnings per share, diluted earnings per share and basic earnings per share after deducting non-recurring gains and losses decreased year-on-year, mainly due to the net profit attributable to shareholders of the listed company for the reporting period decreased compared with the same period last year.

Items of non-recurring gains and losses	Amount	Notes (if applicable)
Gains or losses from the disposal of illiquid		
assets, including the write-off portion for which	-2,849,752.95	Vii. 68; 7. 71; 7. 75
impairment provisions have been made		
Government grants included in the current		
period's profit or loss, except those that are		
closely related to the company 's normal business		
operations, comply with national policy	44,732,807.00	Vii. 67
requirements, are enjoyed in accordance with		
determined standards, and have a sustained		
impact on the company's profit or loss		
Gains or losses from changes in fair value of		
financial assets and financial liabilities held by		
non-financial enterprises and gains or losses		
from the disposal of financial assets and	27,108,380.64	Vii. 68
financial liabilities, except for effective hedging		
activities related to the normal business		
operations of the company		
Occupation fees charged to non-financial		
enterprises included in the current period's profit		
or loss		
Gains or losses from entrusting others to invest		
in or manage assets		
Gains or losses from external entrusted loans		
Loss of assets due to force majeure factors such		
as natural disasters		
Impairment provisions for receivables tested	302,250.24	Vii. 5
separately are reversed	302,230.24	VII. 3
When an enterprise acquires an investment in a		
subsidiary, an associated enterprise or a joint		
venture, the cost is less than the income it should		
enjoy from the fair value of the identifiable net		
assets of the investee at the time of obtaining the		
investment		
The net profit or loss of a subsidiary from the		
beginning of the period to the date of the		
combination resulting from a business		
combination under common control		
Gains or losses from non-monetary asset		
exchanges		
Gains or losses from debt restructuring		
One-off expenses incurred by an enterprise due		
to the cessation of related business activities,		
such as expenses for resettling employees, etc		
A one-off impact on the current period's profit or		
loss due to changes in laws and regulations such		
as taxation and accounting		
A one-time share-based payment expense		
recognized due to the cancellation or		
modification of an equity incentive plan		
For cash-settled share-based payments, gains or		
losses arising from changes in fair value of		
employee compensation payable after the		
exercisable date		
Gains or losses from changes in the fair value of		

investment properties that are subsequently measured on the fair value model			
Gains from transactions at prices that are grossly			
unfair			
Gains or losses arising from contingent matters			
that are not related to the company's normal			
business operations			
Income from trusteeship fees obtained from			
entrusted operations			
Other non-operating income and expenses in	4,255,073.21	Vii. 74; 7. 75	
addition to the above items	4,233,073.21	VII. 74, 7. 73	
Other items of profit or loss that meet the			
definition of non-recurring profit or loss			
Less: Income tax impact	7,607,071.59		
The impact of minority shareholders' equity	£00 C01 01		
(after tax)	588,601.81		
Combined	65,353,084.74		

For items not listed in the "Explanatory Announcement No. 1 on Information Disclosure of Companies Offering Securities to the Public - Non-recurring Gains and Losses" by the company that are identified as non-recurring gains and losses items with significant amounts, and items that are defined as recurring gains and losses as listed in the "Explanatory Announcement No. 1 on Information Disclosure of Companies Offering Securities to the Public - Non-recurring Gains and Losses" The reasons should be explained

# i. Management discussion and analysis

- -- Explanation of the industry and main business of the company during the reporting period
  - $(1) \ Basic \ information \ of \ the \ industry \ to \ which \ the \ company \ belongs \ during \ the \ reporting \ period$
  - 1. Basic information of the industry to which the Company belongs

SUPCON Technology is an industrial AI platform company based on industrial data, with AI large models at its core and full-scenario intelligent agents at its fingertips. Relying on the dual-wheel drive of "technological innovation + model innovation", the company cultivates new quality productivity of AI, reconstructs the production, operation and decision-making paradigms of process industries, and promotes the leap of process industries from automation to autonomy. With the mission of "making industry smarter and customers more successful", the company builds a new architecture of "1+2+N" industrial AI-driven enterprise intelligent operation, providing customers with intelligent solutions of "AI+ safety", "AI+

quality", "AI+ low carbon", and "AI+ efficiency" based on the three-dimensional layout of "technology + scenario + ecosystem", Drive the process industry to leap from single-point intelligence to full-chain intelligence and build a complete AI ecosystem covering technological innovation, application implementation, and business collaboration. The core products are applied in more than 50 countries and regions around the world, covering more than 37,000 customers at home and abroad in dozens of key industries such as chemicals, petrochemicals, oil and gas, power, pharmaceuticals, metallurgy, building materials, papermaking, new materials and food, injecting strong impetus into the high-quality and sustainable development of the global process industry and creating a more relaxed and beautiful living environment for mankind.

The process industry that the company serves is a pillar of the national economy and a mainstay of manufacturing. After decades of development, China has become the country with the largest process industry in the world. However, the average technological and operational levels of the domestic process industry are still relatively backward, and there is an urgent need for automation, digitalization and intelligence upgrades to enhance new momentum for industrial development. As the industrial automation process accelerates and deepens under the deep drive of AI technology, and industrial technology achieves a comprehensive upgrade with the help of AI algorithms, intelligent manufacturing will enter a new stage of high-quality development.

## 2. Industry development situation

# (1) The state policy focuses on supporting the AI industry and vigorously promotes independent innovation

At present, the country is vigorously supporting the development of industrial AI through a series of policies and promoting the intelligent transformation of manufacturing to enhance the overall competitiveness of the country. The "AI Plus" initiative deployed by the State-owned Assets Supervision and Administration Commission of the State Council is multi-pronged, from developing and applying large models, promoting high-value scenario applications, enhancing the supply capacity of intelligent computing power to strengthening element support, comprehensively coordinating the application and development of artificial intelligence technology in industries, enhancing China's competitiveness in the global artificial intelligence field, and contributing to the construction of the national digital economy and an innovative country. The Ministry of Industry and Information Technology's "Implementation Plan for Promoting Equipment Renewal in the Industrial Sector" further refines policy requirements, explicitly promoting the intelligent and digital transformation of industrial equipment and strengthening the research and application of industrial AI technology to enhance production efficiency and product quality. With the help of industrial AI technology, real-time monitoring and intelligent optimization of equipment operation can be achieved, energy consumption can be reduced and the service life of equipment can be extended. The National Conference on Industry and Information Technology emphasized the implementation of the "AI + Manufacturing" initiative, which calls for strengthening the research and development layout of general large models and industry large models. In addition, the "Opinions on Promoting the Innovative Development of Future Industries" issued by seven departments including the Ministry of Industry and Information Technology emphasized the need to break through key technologies of humanoid robots, promote their wide application in intelligent manufacturing, and deeply integrate them with artificial intelligence technology to form core competitiveness with independent intellectual property rights. In the future, with the continuous efforts of policies and the continuous progress of technology, the development of industrial AI in China will have a broader prospect.

## (2) Industrial AI will drive industries to achieve high-quality development at a faster pace

China's software business revenue reached 7.06 trillion yuan from January to June 2025, up 11.9% year-on-year, according to data released by the Ministry of Industry and Information Technology. The total profit was 858.1 billion yuan, up 12.0% year-on-year, and the business was in good shape. By sector, revenue from software products was 1,544.1 billion yuan, up 10.6 percent year-on-year, accounting for 21.9 percent of the total revenue of the industry. Among them, revenue from industrial software products was 144.5 billion yuan, up 8.8% year-on-year. China's industrial automation market size exceeded 259.8

billion yuan in 2024 and is expected to maintain a compound annual growth rate of around 2.3 percent from 2025 to 2027, according to China Industrial Control Network. As the curtain of the 15th Five-Year Plan rises, the country is taking unprecedented steps towards the great journey of Chinese-style modernization, and the industrial automation and industrial AI markets will also witness a sustained and vigorous development wave. The rapid development of frontier industries such as new materials, new energy and biopharmaceuticals has opened up broader space for the application of industrial AI. Intelligent industrial instruments, as the "nerve endings" of industrial AI systems, undertake multiple tasks such as data collection, edge computing, predictive maintenance, and anomaly detection. Robots, especially advanced technologies such as humanoid robots, are showing great potential in manufacturing. The traditional software development and delivery model is being disrupted. Multimodal large models, multimodal agents, and software subscription models have broken the delivery difficulties caused by project differences, significantly shortened the construction cycle of industrial enterprises' digital transformation, and significantly improved the input-output ratio. According to the China Internet Society's (CNNIC) statistical report on the development of China's Internet, the scale of China's artificial intelligence industry exceeded 700 billion yuan in 2024, maintaining a growth rate of over 20% for many consecutive years. According to Omdia data, the AI software market is expected to experience explosive growth in the coming years, with the global AI software market size projected to reach \$218 billion by 2029. IDC predicts that the compound annual growth rate of China's AI+ industrial software segment will reach 41.4% from 2024 to 2028, far exceeding the 19.3% compound annual growth rate of core industrial software during the same period. By 2028, the penetration rate of AI+ industrial software will also increase from 9% in 2025 to 22%. In addition, the combination of large Industrial AI models and Industrial AI Agents can bring users new interaction experiences and value enhancement, quickly build a complete intelligent ecosystem, and thus fully stimulate the digital transformation needs of a large number of industrial enterprises. This will bring revolutionary development opportunities to the industrial automation and industrial AI markets and rapidly drive the transformation of traditional manufacturing to intelligence.

## (3) New service models enhance user experience and continuously create value

Subscription-based and membership-based services are quietly changing the face of industrial software services, becoming a model of technological and business model innovation. With the rapid development of technologies such as cloud computing, AI, and large models, the iteration speed and update frequency of software products have increased significantly, and the traditional one-time purchase model has become difficult to meet users' demands for continuous service and immediate updates. The subscription model has emerged, providing users with a flexible way to use it, ensuring the continuity and immediacy of services, and allowing users to always apply the latest technology; And with a low one-time investment, it can attract more users to embark on the digital transformation process. At the same time, for industrial software providers, the subscription model can establish a stable source of revenue and promote continuous innovation and improvement of products. This model not only conforms to the trend of technological change, but also drives the overall development of the industrial software industry and industrial AI. In the future, with the rapid iteration of industrial software products and the increasing demand from users, the subscription model is expected to become the mainstream model in the field of industrial software services, leading the industry towards greater efficiency and flexibility. At the same time, industrial e-commerce is gradually reshaping the traditional purchasing model, and online transactions and platform-based strategies are emerging as the mainstream transaction models. By building comprehensive online trading platforms for industrial products, enterprises can cross geographical and technical boundaries, efficiently integrate massive industrial product resources, and achieve one-stop procurement from raw materials, components to products. Online transactions not only significantly enhance transaction efficiency and reduce procurement costs, but also precisely match supply and demand through AI and big data analysis, optimize supply chain management, and platform-based operations further achieve information transparency to ensure transparent procurement.

## (4) International cooperation helps industrial AI embrace new development opportunities

The vast global market offers more tangible opportunities for the application and development of industrial AI. The steady progress of the Belt and Road Initiative is helping Chinese enterprises to continuously enhance their international collaboration and business layout capabilities. From January to June 2025, Chinese enterprises' non-financial direct investment in Belt and Road countries reached 135.85 billion yuan, up 22 percent year-on-year; In terms of overseas contracting projects, new contracts were signed at 814.87 billion yuan, up 21 per cent year-on-year, and business turnover was completed at 465.73 billion yuan, up 8 per cent. The "Opinions on Promoting the Innovative Development of Future Industries" jointly issued by seven departments including the Ministry of Industry and Information Technology also explicitly stated that international cooperation should be deepened, enterprises should be supported to steadily expand overseas business on the basis of abiding by international rules, and multi-party resource coordination should be strengthened. In this process, digital economy cooperation has become an important link connecting the Belt and Road Initiative with the dual circulation development pattern, and industrial AI is emerging as one of the key technologies supporting this process. With the deepening of international cooperation, Chinese enterprises are integrating into the global market in a more stable and sustainable way, constantly accumulating experience and enhancing international competitiveness.

- (2) Product families
- 1. Main products or services
- (1) Family of industrial AI products
- ① Time-series Pre-trained Transformer (TPT)

Time Series Large models (TPT) are pre-trained on massive industrial data and have core capabilities such as simulation and prediction. They can cover a wide range of industrial scenarios, generate industrial core content such as control strategies, operation optimization schemes, bottleneck analysis reports, etc., and deeply expand AI applications from the content domain (text-to-text, text-to-image, etc.) to the production entity domain, revolutionizing the way data is applied. It has enhanced the efficiency of production and manufacturing in process industries and accelerated the intelligentization of process industries.

TPT integrates industrial multi-model capabilities to support various industrial applications such as analysis, optimization, control, and training, thereby solving problems such as scattered industrial applications and fragmented data applications. It builds a new model based on a large model and creates a software to support multiple applications, achieving cross-condition, high-precision, and high-reliability simulation and prediction of the equipment. TPT, as a "smart brain", enables devices to think and speak like experts, self-supervise and self-optimize operations. It has achieved breakthrough applications in multiple devices in industries such as chlor-alkali, thermal power, and petrochemicals, solving numerous

complex control, operation optimization, and anomaly warning problems, and achieving the goals of improving labor efficiency, stable operation, and increased revenue in production facilities.

The application of TPT can provide deep insights into the influencing factors of the operation of production units, fully understand the operation status of production units, accurately predict the future trend of production units, significantly reduce the workload of production management and operation personnel, enhance the safety of unit operation, and achieve a 30%-50% increase in labor efficiency; TPT supports the optimization of operational decisions in various scenarios such as process optimization, control strategy and parameter optimization of the device to enhance production efficiency, reduce production costs, improve product quality, and maximize the production benefits of the device, achieving a 1-3% increase in benefits.

# Enterprise operation agent Decision Agent Support Assurance Agents Production Agents Supply chain Agents Sales and service Agents Smart Build applications APP/Agent Builder Business data Hypergraph Large Model (HcT) Expertise/experience

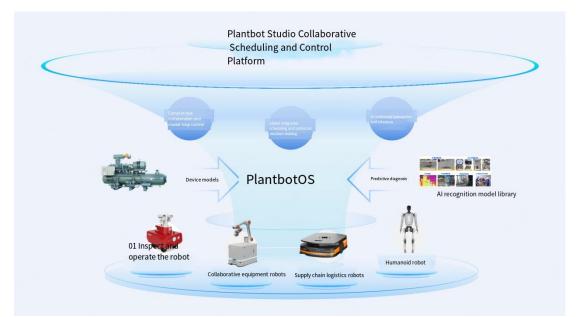

## 2 Hyper Graph Transformer (HGT)

HGT is a graph-focused hypergraph model for the BA field, which has advanced understanding and reasoning capabilities for business operations. It can help enterprises quickly build intelligent applications and Agents for research, production, supply, sales, service, support and assurance, and improve operational efficiency through multi-agent cluster collaborative perception, analysis, action, etc. Reduce operating costs while enhancing intelligent decision-making and achieving excellent operation for the enterprise.

HGT drives the full digital and intelligent transformation of enterprise operations through two core application scenarios. One is to build a cluster of full-chain agents based on the strong reasoning capabilities of the HGT graph attention model, fundamentally upgrading the enterprise operation collaboration mode and bringing significant operational cost reduction and efficiency improvement to users; Second, by leveraging the deep correlation mining capabilities of the HGT graph attention model for diverse and complex information, intelligently integrate and deeply analyze massive industrial data to uncover latent value and help enterprises move towards "data-driven decision-making".

HGT builds intelligent agent clusters for enterprises, injects digital labor, and brings operational efficiency improvements of more than 30% by reshaping operational collaboration processes. At the same time, with the new "data-driven decision-making" paradigm, it brings significant improvements in decision-making efficiency and promotes the "intelligent transformation" of enterprises from operations, management to decision-making.

## (2) Robot products business

The new generation of "Plantbot" AI+ robot architecture of SUPCON Technology, with Plantbot Studio collaborative scheduling and control platform, PlantbotOS industrial agent control platform as the core, and factory operating system as the digital foundation, completely reconstructs the traditional sensory-control chain of the robot industry. The robot architecture connects heterogeneous systems such as DCS, PLC, MES and ERP at the bottom and abstractions processes, equipment and production materials into unified digital objects and service interfaces at the top. Meanwhile, the multi-modal AI perception and inference engine built into the architecture, Fusing multi-dimensional heterogeneous sensor data such as visible light, infrared, acoustic, gas, vibration, current, temperature, etc. in the same spatio-temporal coordinate system, and combining the mechanism model of equipment health status and hybrid model to diagnose and predict the operating status and potential faults of all kinds of equipment in the factory (including dynamic equipment, static equipment and electrical instrumentation equipment, etc.) Lock in "anomalies" before they become "faults".

Four types of robots released by Central Control Technology under the Plantbot AI+ robot intelligent operation architecture: inspection and operation robots, collaborative equipment robots, supply chain logistics robots, and humanoid robots for industrial applications.

Inspection and operation robots: Integrating multimodal perception, autonomous navigation and AI anomaly recognition technology, they can perform equipment status monitoring, instrument reading recognition and simple valve operation tasks around the clock in complex industrial environments. Through real-time interaction with the Plantbot AI platform, a closed-loop management from "identifying problems" to "predictive intervention" is achieved, significantly enhancing the intrinsic safety level and operation and maintenance efficiency of the factory and reducing the risk of manual inspection in high-risk areas.

Collaborative equipment robots: Based on high-precision force control and edge intelligence algorithms, they can be flexibly integrated into existing production lines to perform fine operations such as assembly, inspection, and maintenance, and support safe collaborative operation with engineers. Through digital twin mapping and remote control capabilities, cross-regional expert guidance and standardized operation execution are enabled to help enterprises achieve flexible manufacturing and knowledge accumulation.

Supply chain logistics robot: Equipped with an intelligent dispatch system and adaptive vehicle interface, it enables end-to-end unmanned material transfer from raw material entry to finished product exit. Combined with the global optimization capabilities of the Central Control Industrial Internet platform, it dynamically responds to changes in production rhythms, enhances warehouse turnover and supply chain response speed, and builds an efficient, transparent and traceable smart logistics system.

Humanoid robots for industrial use: As a cutting-edge exploration under the Plantbot AI architecture, they have human-like forms and general operational capabilities, can adapt to the existing factory human-machine environment, and perform complex tasks in multiple scenarios. With large model-driven task planning and autonomous learning capabilities, it will enable flexible deployment of "one machine, multiple functions" in the future, providing revolutionary solutions for operations in extreme environments, replacement of skills-deficient positions, and intelligent transformation of factories.

Based on the integrated framework of "analysis - optimization - control - training", various robots under the Plantbot architecture can explain the root cause of anomalies in real time with a visual interface, give disposal suggestions, and autonomously complete complex tasks such as emergency response and logistics handling, thereby promoting the inspection and diagnosis of petrochemical, chemical, thermal power and other facilities and materials, Leap from experience-driven to model-driven to accelerate the full intelligentization of process industries.

## (3) Family of automation control products

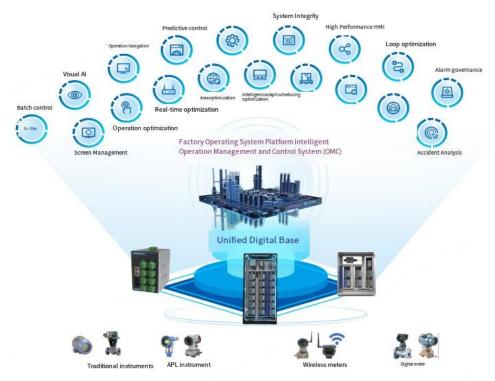

- 1 Family of control system products
- a. Universal Control System (UCS)

UCS, a new minimalist architecture control system that controls data centers, all-optical deterministic networks, and intelligent devices, addresses the three major challenges of "data, computing power, and algorithm" for control systems in the AI era, and has typical features such as software-defined, fully digital, and cloud-native. UCS is leading the industrial sector through a leap from "local intelligence" to "AI-driven autonomous operation".

It has the following value: with a minimalist architecture, it achieves low cost and easy maintenance, saves up to 90% of cabinet space, reduces cable costs by 80%, and shortens the construction period by 50%. Under the "AI-Inside" concept of intelligence first, UCS deeply integrates the latest artificial intelligence technology: AI-PID with deep machine learning enables autonomous operation of the base loop; The newly designed control engine NyxEngine can intelligently invoke the powerful computing power of the GPU; Industrial-specific private models offer GenAI features such as automatic code generation and intelligent question answering.

b. Intelligent Operation Management & Control System (OMC)

Intelligent operation Management & Control System (OMC) is a core foundational subsystem of production process automation, integrating intelligent, digital, and automation technologies to achieve intelligent perception, intelligent control, intelligent operation, intelligent optimization, and intelligent operation and maintenance of production facilities, meeting functional requirements such as full-process process control, safety control, unit control, logic control, process operation, and operation management.

Supcon Technology continues to focus on the process industry, creating value for customers in the process industry. Based on practical applications and customer feedback, the OMC system focuses on customer pain points, integrates a large number of innovative technologies, and embodies three new features: ultimate interconnection, virtual-real intelligent control, and all-domain optimization. The essence and implementation path of autonomous operation are very clearly defined. The system responds autonomously to external demand interference and manages autonomously to internal operation: ultimate interconnection, distributed saves initial investment; Virtual and real intelligent control, digital accumulation of experience for process improvement; All-domain optimization and intelligent improvement of operational efficiency. The OMC system is based on multi-domain technologies such as industrial big data, mechanism models, and machine learning, and combines industrial Know-how to conduct all-weather assessment of all production elements, keeping track of key parameters of production facilities at all times and tapping the potential of production operation of facilities. Through cross-device collaboration, achieve material and energy balance among regional devices and expand production efficiency improvement from single devices to multi-device regions. By integrating new AI features such as conversational generating SOP functionality and intelligent alarm health score, it provides intelligent identification and handling contingency plans, ultimately maximizing the overall economic benefits of the entire plant.

## c. Safety Instrumented System (SIS)

The Safety Instrumented system (TCS-900&TCS-500) is an industrial control system independently developed by Supcon Technology for application scenarios such as emergency shutdown systems, fire and gas systems, toxic and flammable gas monitoring systems, combustion management systems, high integrity pressure protection systems, etc. for process industries, in accordance with the scale of process equipment and the requirements of basic investment and construction, We offer a portfolio of solutions that strike the best balance between safety and economy to ensure the safe operation of critical equipment and high-value processes in enterprises and reduce the risk to life safety.

Safety instrumentals have the three highs of high safety, high reliability and high availability. High safety: Functional safety level SIL3, safety architecture 2×2003D, fault diagnosis coverage >99%, information security IEC 62443 SL2, information innovation localization; High reliability: EMC standard 4A grade, G3 anti-corrosion /CE/ classification society certification, maximum altitude 4000 meters, operating temperature (-20 to 70) °C, operating humidity (5% to 95%) RH, no condensation; High availability: Integrated DCS configuration monitoring, dual work full redundancy, scalable online, availability up to 99.999% to 99.9999%, fault tolerance margin 3-3-2-0.

## d. Compressor Control System (CCS)

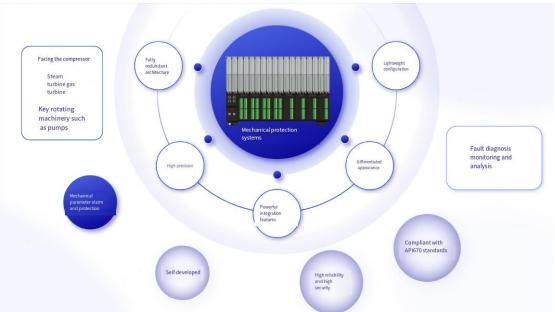

The compressor control system (T9100&T5100) is a professional application-oriented compressor control system product combination solution independently developed by Supcon Technology for the compressor control and protection application scenarios in flammable, explosive and high-risk areas of the petrochemical and chemical industries. It is specifically designed for centrifugal, axial flow and other compressor models. The system adopts international advanced compressor control algorithm technology,

including unit optimization control technologies such as anti-surge control, performance control, speed regulation control, and extraction control, to help users achieve safe production and energy conservation and consumption reduction, and enhance the intelligent operation level of enterprises.

The compressor control system is equipped with four technical features: SIL3-level hardware platform, advanced control technology, integrated deployment, and operational optimization. SIL3 level hardware platform: Based on triple redundancy fault-tolerant (TMR) safety control system, functional safety level SIL3, industrial EMC standard 4A level and other features, it meets users' requirements for production safety and availability to the greatest extent. Advanced control technology: Self-developed international advanced unit control technology based on dimensionless anti-surge coordinate system, through the implementation of various forms of control and protection combination strategies, multi-loop coordinated control and decoupling control, to meet the complex control requirements of series and parallel units, achieving fully automatic and energy-efficient operation. Integrated deployment: It can be seamlessly integrated with the central control DCS system and SIS system, facilitating users to achieve integrated control of the entire plant process flow, improving efficiency, reducing costs, and ensuring quality; Fully automatic control and optimization: Achieve one-click start/stop and automatic loading/unloading without manual intervention throughout the process, truly fully automatic control, control energy consumption reduced by 10%, process fluctuation reduced by more than 15%.

## e. Mechanical Protection System (MPS)

The Mechanical Protection System (MPS5000) is a fully self-developed mechanical protection system that complies with API670 standards for monitoring and protection of medium and large rotating machinery by Supcon Technology. The system can continuously measure the key phase, rotational speed, vibration, displacement, expansion difference, eccentricity, shell vibration, thermal expansion and other mechanical parameters of critical equipment such as compressors, steam turbines, gas turbines and critical pumps, and send the measurement results to the control system and emergency stop system for operators to monitor and analyze the operation of critical equipment and perform alarm and protection functions when the parameters exceed the limit.

The mechanical protection system integrates vibration interlock protection, condition monitoring and fault diagnosis. It supports network redundancy and module redundancy, is compatible with eddy current, speed, acceleration, magnetoresistance and other sensors, and can logically program the output relay. It can accommodate up to 64 monitoring channels. The vibration displacement module and relay module meet the SIL certification requirements. The system is configured with visual web-based configuration software, combined with monitoring and analysis software to achieve data analysis and graph display

functions, to understand the health status of equipment in real time, optimize planned downtime maintenance strategies, and assist in the digital construction of enterprise equipment management.

## f. Programmable Logic Controller (PLC)

Based on core technological innovations in industrial control, SUPCON Technology has developed a dual product matrix of GCS-G and GCS-M, and constructed a full-stack control solution from distributed systems to intelligent equipment. The system breaks through the limitations of the traditional PLC architecture and achieves dual innovations in control levels and data dimensions.

The GCS-G networked intelligent control series adopts an independently controllable distributed control architecture with full redundancy fault tolerance, 99.999% high availability, SIL3 functional safety level, and builds intrinsic safety protection; Supports 1000-point distributed I/O networking and hybrid configuration technology to build a control topology of "centralized management + edge autonomy". A large number of domestic alternatives have been achieved in key areas such as oil and gas pipelines, rail transit, municipal water affairs, hydropower, and power.

GCS-M intelligent equipment control engine focuses on the bottleneck of high-end equipment control, integrates high-computing hardware, multi-interface protocols, and is equipped with frameworks such as deep learning, machine vision, and autonomous learning, and has built-in models for equipment failure, flow calculation, medium analysis, and safety early warning, achieving integrated application of AI+ automation control; An integrated architecture that combines IT technologies such as big data, visualization, and Internet of Things with OT technologies such as logic control, motion control, and fieldbus to achieve automation, intelligence, and lean production processes; For the high-performance control requirements of equipment control, achieve dual safeguards of functional safety (ISO 13849 PLe) and information security (IEC 62443); The system is equipped with high-speed + safety bus for the integration of safety and non-safety, and is paired with high-speed process modules to fully meet the three 1ms operational requirements of control, interlocking, and coordination for large high-value mechanical equipment; It can be widely applied in professional equipment fields such as fans, packaging machinery, metallurgical equipment, high-speed production lines for building materials, and intelligent equipment for liquor.

## 2 Family of instrument and meter products

The instrumentation industry is a fundamental and strategic industry of the national economy, but the domestic production rate is still low and the dependence on foreign countries is high. In recent years, as the pace of self-reliance and self-strengthening in science and technology has accelerated, Supcon Technology has been committed to breaking through key core technologies and promoting domestic substitution. The instrumentation business segment of SUPcon Technology covers multiple product lines, providing value to customers.

a. Measurement Instrument product series (Measurement Instrument)

The measurement instrument product line includes pressure measuring instruments, flow measuring instruments, level measuring instruments, temperature measuring instruments, intelligent calibrators, safety barriers, etc., and is widely used in industries such as petrochemical, chemical, metallurgy, power, and food and medicine.

The main roles of measuring instruments in industrial intelligence include:

Precise measurement: Capable of accurately measuring various physical parameters such as temperature, pressure, flow, level, etc. These data are the basis for controlling and optimizing the production process;

Data acquisition and transmission: Automatically collect on-site data and send it to the control system via a communication network, support remote monitoring and management, and ensure real-time grasp of production status;

Fault diagnosis and early warning: By continuously monitoring the operating status of the equipment, abnormal situations can be detected in a timely manner and early warning signals can be issued, which helps prevent equipment failures or accidents and reduce downtime;

System integration and optimization: Capable of seamless integration with DCS, SCADA, etc., supporting advanced analytics and decision support, enhancing overall production efficiency and safety;

Safety Assurance: Integrated with safety instrumented systems (SIS) to ensure rapid response in hazardous situations and protect personnel and equipment safety. Take the CXT series of high-precision intelligent pressure transmitters as an example. With a monocrystalline silicon composite sensor, it can measure pressure/differential pressure, flow and level signals of media such as gases and liquids, achieving an accuracy grade of 0.05, long-term stability better than ±0.1%/10 years, and obtaining NEPSI, ATEX, CE, SIL certifications It supports mainstream fieldbuses such as FF, ProfiBus-PA, HART (including wireless HART), as well as the new high-speed bus APL, and 5G wireless communication, and is widely used in pressure, flow and level measurement conditions.

During the reporting period, efforts were accelerated to enhance APL's full range of intelligent instruments, 5G wireless transmitters, and the advanced intelligent diagnostic capabilities of instruments to meet the technical requirements of the process industry for the miniaturization, intelligence, and high adaptability of instrument products. 12 types of APL instruments and APL hand controllers were developed and applied on a large scale, CXT-PRO high-end intelligent diagnostic pressure transmitter, miniaturized valve positioner, micro radar level gauge, new electromagnetic flowmeter, new mass flowmeter, intrinsically safe hand controller, integrated lightning protection grid and other products were launched, and domestic/international certifications for each type of instrument products were continuously expanded. And actively layout multi-parameter instruments with new sensors as the core, and build intelligent joint applications with upper-level AI systems.

b. Analyzer Product Series (Analyzer)

The analyzer product line includes calorimeters, photoacoustic gas analyzers, XFR elemental analyzers, Raman spectrometers, CO detection systems, CO and humidity detection systems, industrial process chromatography analyzers, laser gas analyzers, industrial online titrators, analysis pretreatment systems and analysis cabins, environmental online monitoring and analysis systems, distributed laboratories (laboratory online), Intelligent analysis systems are widely used in industries such as petrochemicals, chemicals, oil and gas, metallurgy, food and medicine, and energy.

The main roles of analyzers in industrial intelligence include: 1) Component analysis: real-time monitoring of chemical components in fluids or gases helps with quality control of raw materials and finished products; 2) Concentration measurement: Capable of detecting and quantifying specific components in mixtures, achieving highly sensitive measurements even at very low concentrations, helping operators adjust reaction conditions to increase production and product quality; 3) Condition monitoring: Capable of continuously monitoring key parameters, ensuring process stability and consistency, and enabling predictive maintenance to reduce unexpected downtime; 4) Fault warning: The real-time data provided helps to detect early signs of equipment failure and safety hazards in a timely manner, enhancing process safety and reducing risks such as fire and explosion; 5) Process optimization: The real-time data provided can be used to optimize reaction conditions, mixing ratios and other process parameters, reduce energy consumption and waste emissions, and achieve green production. For instance, a calorific value meter can measure key combustion parameters such as the Wopper index, calorific value, and demand for combustion-supporting air of the gas. It has the advantages of fast response, high precision, high repeatability, simple maintenance, no open flame (no flameout fault), and is not easily affected by ambient temperature. It has ATEX/IECEx/NEPSI certifications, is suitable for explosion-proof Zone 1, and is widely used in combustion control, gas unit control, flare combustion and other conditions.

c Intelligent Control Valve product series

The intelligent control valve product line includes intelligent control valves, intelligent control ball valves, intelligent control butterfly valves, eccentric rotary control valves, reactor bottom discharge valves, special control valves, intelligent valve positioners, etc., and is widely used in industries such as petrochemical, chemical, metallurgy, power and new energy (such as solar thermal power generation).

The main roles of intelligent control valves in industrial intelligence include:

Flow regulation: When used in conjunction with an intelligent valve positioner, it can precisely regulate the flow of the fluid, ensuring that the fluid delivery volume in the process meets the set value, and ensuring the stability and accuracy of the flow;

Pressure regulation: Control the pressure by adjusting the valve opening to ensure that the pressure in the pipeline, reactor, or tank remains within a safe range, which is crucial for maintaining the stable operation of the system;

Temperature regulation: Controlling the temperature inside the reactor by adjusting the flow of the coolant or heating medium to maintain ideal reaction conditions, which is crucial for the control of the chemical reaction;

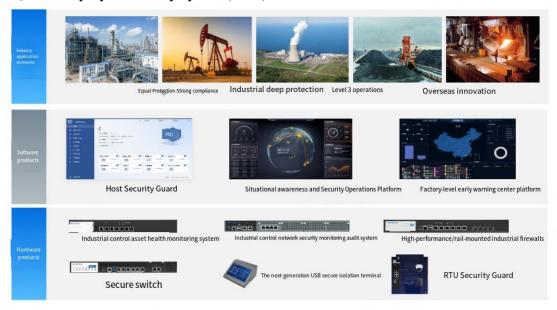

Fluid cut-off: When necessary, the intelligent control valve can completely block the flow of the fluid, serving as a safety isolation;

Flow distribution: Support for proportionally distributing fluids to different branch paths ensures proper fluid supply to each part, which can improve production efficiency and product quality. Take the intelligent control valve as an example. With a new functional modular design, it has high regulation accuracy, good sealing performance, long service life, easy maintenance, and is widely used in conventional and particularly harsh (high pressure difference, strong corrosion, cavitation, multiple flow, etc.) conditions.

During the reporting period, we continued to focus on the domestic development of control valves for harsh and complex operating conditions. With modular design, high-precision regulation and excellent sealing performance, we successfully met the challenges of complex operating conditions such as high and low temperatures, high pressure difference, strong corrosion and cavitation. Through independent innovation, we achieved breakthroughs in the localization of high-end products such as high-temperature molten salt valves, fully lined ceramic eccentric rotary valves, ultra-high temperature shut-off valves, and ultra-low temperature valves, filling domestic gaps and accelerating the process of import substitution. Relying on its own intellectual property rights, the company has built a product matrix of intelligent control valves with international competitiveness, pushing domestic intelligent control valves to new heights and injecting strong impetus into the intelligent development of process industries.

#### (4) Family of industrial software products

1 Industry CyberSecurity System (ICSS)

In response to the information security protection requirements in industrial scenarios, the company independently developed a series of industrial cybersecurity system products, creating an integrated solution for industrial cybersecurity in smart factories, providing a comprehensive and multi-dimensional

security technology system covering core functions such as data security, terminal security, and network security, and providing full life-cycle security services. Based on its deep experience in the process industry, it has built a three-level operational protection system for industrial information security of SUPCON, effectively enhancing the security protection capabilities of industrial sites. The solutions are easy to implement and have wide scalability, helping enterprises achieve the construction of compliance level protection.

Host Security Guard is an industrial host protection software that integrates multiple functions such as program and network whitelist protection, virus scanning and removal, and mandatory access control. With a "white + black" protection mode, it supports policy-based network whitelist protection to effectively defend against cyber attacks on industrial control systems.

The situation awareness and security operation platform serves as the information, analysis and command center for security operations. It collects and analyzes various types of security information in real time, combines threat intelligence to achieve intelligent perception and dynamic judgment, visually presents the current security status and achievements, establishes a rapid response process, and improves the efficiency of security operations and responses.

The factory-level early warning center platform is an industrial information security early warning and handling platform for smart factories, which solves the problems of security situation awareness, risk early warning and incident handling through multimodal security data analysis. It has a powerful data analysis engine and scenario-based analysis capabilities, supports multi-dimensional modeling analysis, and has SOAR automated security operation and maintenance handling capabilities and a rich feature library, which can accurately judge and handle the current security situation.

The Industrial Control Asset Health monitoring system is an asset health analysis system specifically designed for industrial control networks to conduct three-dimensional mapping and risk monitoring of assets. Based on an integrated industrial control knowledge base, it actively detects and acquires the fingerprint information of assets in the network, effectively extracts the key features of assets, forms an industrial control asset atlas and network map, and enhances the ability and efficiency of daily operation and maintenance and risk emergency response in industrial sites.

The next-generation USB secure isolation terminal ensures secure access and management of factory mobile media. It has a built-in virus detection and removal engine to achieve file filtering, auditing and protection, secure access to mobile storage through the network to prevent virus intrusion, meet the requirements of secure data transmission, and achieve functions such as physical isolation, fine-grained data control, leakage prevention, emergency backup and USB drive control.

RTU Security Guard is a product specifically designed to defend against unauthorized access and physical intrusions to remote terminal unit (RTU) devices, effectively addressing the issue that industrial control systems are increasingly becoming a significant target of information security threats. With enhanced two-factor authentication mechanisms, real-time intrusion prevention systems and integrated physical security technologies, it effectively ensures the security of RTU devices, prevents unauthorized access and physical intrusions, and provides comprehensive security protection.

## 2 Data Resource System (DRS)

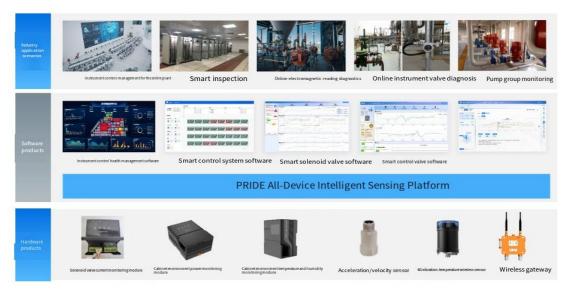

The Data Resource System is a system platform designed with the concept of "all-domain data governance + data agile delivery". The system links down massive amounts of data, relying on a unified data base to achieve a full closed-loop process from data collection, storage, governance to application; It supports the application of the indicator center product in a more convenient and systematic way to achieve full life cycle management of enterprise operations.

Data Cloud, based on multi-tenant models and cloud-native technologies, supports SaaS and private deployment. Through multiple big data capability components, it realizes the entire process of data collection, storage, governance, management, and application, and provides basic capabilities in a service-oriented manner to support agile data delivery. The software as a whole is divided into two major product modules: the data middle platform and the metrics center.

The data middle platform is built around the technical side (distributed storage, big data computing engine product module) and the tool side (multiple big data tool components). On the technical side, it relies on the storage and computing separation architecture and the node/specification level elastic scalability to efficiently support the storage and processing of massive data ranging from TB to PB. With mainstream big data engines such as Flink and StarRocks built in, it covers a wide range of data processing scenarios including batch processing, stream computing and batch-stream integration. Build a unified data foundation based on these capabilities (cloud computing, serverless, big data technology, etc.) to provide solid support for enterprise data warehouse construction and data governance. On the tool side, it integrates key modules such as data development, services, asset management and marketing, and adopts a multitenant model. Through company-tenant-personnel three-level authority management, it achieves full-chain collaboration from data collection, storage, governance to application, helping enterprises effectively solve problems such as data silos and low data quality.

The Metrics Center, centered on the construction of an enterprise-level metrics system, provides full-chain metrics management, visual display and in-depth analysis modules to ensure that enterprise metrics truly achieve the efficient governance goal of "defined once, available anywhere", quickly develop and deliver data requirements, and solve problems such as repetitive development, inconsistent metrics, and high operation and maintenance costs Achieve efficient management, operation, analysis and application of the enterprise metric system.

### **③ Equipment Health Supervisory (EHS)**

The Equipment Health System is a new generation of intelligent perception platform for equipment innovatively developed by Supcon Technology. Based on AI big data analysis, machine learning and other technologies, combined with ET equipment technology, it helps enterprise users solve the intelligent perception and predictive diagnosis of various on-site equipment, and realizes the fault detection and diagnostic analysis capabilities of "one network for diagnosis" of factory equipment.

The Equipment Health system is based on the PRIDE all-device intelligent perception platform. With its data lake equipment object-oriented storage and AI big data analysis capabilities, it conducts precise modeling, analysis and diagnosis of equipment, links and the entire device, thereby assisting users in achieving comprehensive data perception and prediction of dynamic, static, electrical, instrumentation, control and other systems and equipment in the entire plant, including:

Instrument and control health management software: An instrument and control equipment health monitoring system that combines online monitoring and offline detection for the entire plant's instrument and control systems, improving the efficiency of instrument maintenance and the reliability of instrument and control equipment, and promoting the shift of instrument maintenance from preventive maintenance to predictive maintenance.

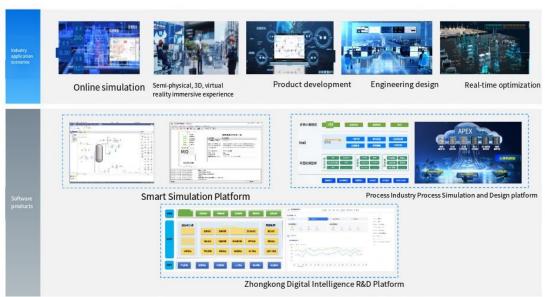

Intelligent control system software: By conducting 24-hour non-stop online monitoring of the temperature and humidity of the cabinet environment and the status of the cabinet control system hardware, it reduces the missed detection rate of occasional faults, ensures production safety, and covers the inspection work content, combined with system hardware diagnosis, "inspection items" are clear at a glance.

Smart solenoid valve software: Utilizing AI big data, machine learning, etc., to predict and diagnose faults such as leakage, viscosity and jamming of solenoid valves online.

Intelligent control valve software: Utilizing AI big data analysis to establish deviation analysis model algorithms for various control valves on site for predictive diagnosis of faults, assisting instrument engineers in fault assessment and maintenance plan formulation in combination with real-time operating conditions.

Dynamic equipment condition monitoring and early warning software: Utilizing AI big data analysis, building mechanism models, etc., to achieve online equipment monitoring, fault diagnosis alarm functions, data reports, analysis reports, etc., to help users enhance the digitalization level of equipment management, reduce production risks, and improve enterprise operation management efficiency.

Its value lies in the centralized daily operation and management of all kinds of equipment at the plant level in the petrochemical and chemical industries; Online equipment status monitoring reduces the frequency and workload of inspections for users; It helps enterprise users identify potential failure risks of equipment in a timely manner and carry out corresponding maintenance, thereby enhancing equipment reliability and stability, reducing downtime risks, and ensuring production safety.

## **④** Product R&D Management and Process Design System (R&DS)

The Product R&D Management and process Design System, which includes the intelligent simulation platform, the process industry simulation and design platform, and the central Control digital intelligence R&D platform, provides support for the entire life cycle of products in process industry enterprises.

The intelligent simulation platform is specifically designed for process industries such as refining, petrochemicals, power, etc., providing customized operator simulation training, process verification optimization, 3D simulation and semi-physical simulation training solutions. The platform is based on strict mechanism modeling of Central Control technology and mature DCS technology to achieve seamless integration with on-site DCS configuration and ensure consistent operation experience. As the cornerstone of "digital twin" and "industrial metaverse", the smart simulation platform integrates dynamic simulation and 3D simulation technologies. It not only strengthens personnel training, shortens commissioning cycles, and enhances emergency response capabilities, but also helps enterprises with process optimization, bottleneck analysis, and intelligent decision-making throughout the entire life cycle to ensure stable and efficient production.

APEX is a general-purpose process simulation software designed specifically for the process industry. It can convert actual operating processes into computer models for physical property calculation and process flow simulation, predict and answer "if-then" questions, guide process research and development, engineering design, production operation and facility modification, and achieve safe production and cost reduction and efficiency improvement. Based on simultaneous equations and B/S architecture, APEX offers features such as no installation required, bilingual interface, wide application range, easy loop flow integration, global optimization, scripted operation, non-standard equipment modeling and multi-interface, and supports mechanism and AI fusion modeling to expand application boundaries. The value lies in: thermodynamic tools facilitating rapid process development, optimizing multi-industry processes, simplifying model debugging, supporting non-standard equipment simulation optimization, and integrating mechanism and AI modeling to achieve efficient device characteristic responses and multi-scenario applications.

SUPCON Digital Intelligence R&D Platform focuses on providing enterprises with efficient project management tools to support the refined management and digital transformation of the R&D system. The core value of the platform lies in breaking data silos, standardizing management and digitizing operations, and optimizing resource allocation and budget management. The highlights include the rapid construction and trimming of project templates based on IPD management, the provision of real-time data support for

decision-making review through refined cost management, and the full access and management of project business data to provide complete decision-making basis for review at various stages such as initiation review, TR review, and DCP decision-making, empowering enterprises to manage R&D projects efficiently.

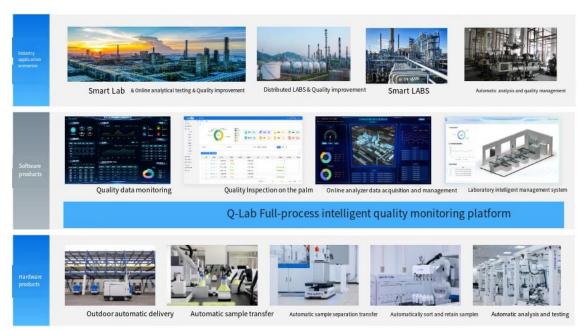

# **(5)** Autonomous Operation System

An autonomous operation system is an intelligent system that enables manufacturing enterprises to achieve automated operation and high-precision control in various production conditions such as mixed raw materials, product switching, and sudden climate changes. It commands DCS/PLC in the form of software to achieve the effect of intelligent production; When combined with the Intelligent Operation management and control system (OMC), a faster, more efficient and secure integrated software and hardware system can be formed.

Autonomous Operation System integrates advanced intelligent process control, intelligent operation cockpit, advanced control, loop health management and optimization, alarm governance and operation navigation software, and combines AI technology with key technologies such as PID loop self-tuning, multi-condition control, complex periodic operation automation and early warning diagnosis, Supports intelligent operation, AI-assisted full-condition control, AI-assisted PID loop tuning, AI-generated operating procedures, integration with TPT large models, etc., covering operation, control and partial optimization requirements for full-process and full-condition (start-up and shutdown, load lifting and lowering, normal production stage) operation of the device, It enables one-click start-stop, long-term control of all operating conditions, operation optimization, and auxiliary operation decision-making applications, significantly enhancing the self-control rate, stability rate and safety of the device, significantly reducing the frequency of device operation and alarm, promoting autonomous and coordinated operation of device production, achieving human-machine collaboration, and reaching "less human" to "unmanned" operation.

## **(6)** Quality Improvement System (QIS)

The quality improvement System is implemented through the Q-Lab full-process intelligent quality monitoring system, which includes full-process quality monitoring platform, smart laboratory solution, online analysis system solution, general inspection and laboratory management, laboratory management, online analyzer management, AI quality management, etc., with a unique quality perspective, Collect, acquire, clean, store, analyze and manage enterprise quality-related data, dynamically monitor enterprise quality with enterprise raw materials, production processes, products and utilities as clues, and achieve "people, machines, materials, methods, environment, measurement" full life cycle and full chain management around quality.

The full-process quality monitoring platform provides all-round quality monitoring for industrial scenarios. Among them, the quality data monitoring software serves as the base platform for data collection, processing and integration through multiple means to ensure data reliability. For enterprises of different sizes, inspection and laboratory management uses a lightweight dual-end design to lower the threshold of informatization for small and micro enterprises, while laboratory management uses a modular APP architecture to meet the diverse needs of laboratories and enhance management precision. The online analyzer management system integrates industrial standards with expert databases, reduces failure rates through real-time monitoring and predictive maintenance, and enhances the reliability of online analysis quality. The intelligent quality assistant, deeply integrated with large AI models, provides auxiliary functions such as voice interaction and intelligent recommendations to simplify the work of quality personnel. These systems cover the entire chain from data collection, process control to risk tracing, forming a multi-level, intelligent quality control system that takes into account compliance and efficiency improvement, and helps enterprises achieve digital transformation.

The smart lab solution upgrades automation and intelligence through AI technology, with core functions including precise sample sorting and efficient circulation using QR codes and automated equipment; Bionic robotic arms simulate human operations and are equipped with highly sensitive sensors to ensure the safety and accuracy of experiments; Integrating machine vision technology to monitor the experiment process in real time and prevent mechanical failures and operational errors; Deep analysis of experimental data based on AI algorithms ensures the reliability of results; Achieve centralized management and intelligent scheduling of equipment, tasks, and data; Reduce operational risks, minimize human errors, optimize resource allocation, and enhance operational efficiency. Smart LABS provide efficient, safe and accurate testing support for the chemical, petrochemical, power grid and other fields. The smart Lab enables 7×24-hour automatic testing, and the entire experimental process is traceable.

The online analysis system solution combines online analyzer equipment with the online analyzer management module of DAAS software. It enables the automatic completion of all processes from online sampling operations, pretreatment, online detection to data processing, continuous or periodic chemical composition and physical property detection, providing accurate, true and complete online quality data for industrial production. These data not only help to monitor the production process in real time to ensure stable product quality, but also enable automation control and optimization of production processes through integration with DCS systems. The online analyzer system consists of a sampling device, a pretreatment device, an analyzer, and a data processing system component that can take samples directly from the process line or through a fast loop. The equipped pretreatment system can adjust the sample state to ensure the long-term stable operation of the analyzer. The online analyzer management module centrally manages the on-site online analyzers through functions such as instrument data acquisition, instrument operation status monitoring, and remote control, simplifying the difficulty of instrument maintenance and management and reducing the input of human, material and financial resources. At the same time, it is equipped with powerful data processing and analysis capabilities, which can automatically process and analyze large amounts of data, extract valuable information, and help enterprises better understand the production process and product quality. In addition, it offers a complete technical support system, including fault alerts, maintenance, anomaly diagnosis, etc., to ensure that each instrument can receive timely and effective maintenance support. It has achieved automatic calibration management of the instruments, standardized the calibration procedures, ensured the accuracy and reliability of the instruments, reduced the difficulty of human operation and management, and achieved a fundamental transformation from passive maintenance to active prevention, from experience-driven to data-driven, and from human decision-making to intelligent decision-making.

## **7** Production Operation System (POS)

The production operation system includes batch production management software, continuous production management software, operation data analysis management software, and integrates advanced technologies such as big data and AI, providing functions such as knowledge Q&A, data analysis, operation assistance and recommendation. By leveraging AI to fully perceive all elements of production information, mine the value of production data, automatically identify and predict potential problems, enable enterprises to have full control over the production process, help enterprises make more accurate production decision adjustments in a timely manner, meet the needs of industries such as petrochemicals, chemicals, building materials, new energy, pharmaceuticals, food and beverages, Management needs for safety, environmental protection, quality improvement, cost reduction and efficiency increase in the production process of enterprises.

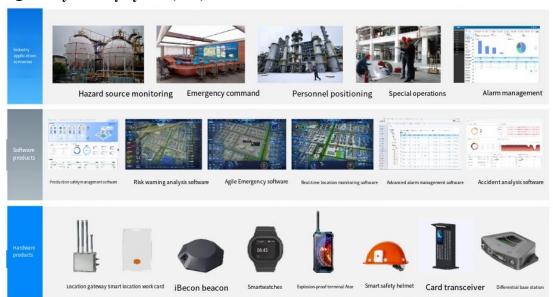

Batch production management software is designed for batch production mode. Through planning and scheduling optimization, process modeling, production execution control, and data integration analysis, it achieves increased production efficiency, quality assurance, cost reduction, and enhanced flexibility. The software connects ERP vertically with automated execution systems and integrates LIMS, QMS, WMS, EAM and other systems horizontally to facilitate production, quality inspection and

warehouse collaboration, achieve transparent data traceability and batch optimization, and help enterprises with standardized management, error-proof operation and efficiency improvement.

The continuous production management software is designed for continuous production mode, providing functions such as production scheduling, process management, team operation, and material management. By monitoring full-process data, establishing a material balance model, achieving three-level balance, and enhancing production traceability, transparency, and efficiency. The software integrates operational norms, visualizes the production process, quantitatively assesses and continuously improves, automates data processing, eliminates information silos, and enhances the level of refined control.

The operation data analysis management software is designed for continuous production mode. Through efficient data processing capabilities, it provides real-time quantification of the smooth state of production operations, helping enterprises optimize operational stability and compliance, and enhance safety and efficiency. The software covers key data collection and analysis functions such as process stability rate, self-control rate, interlock activation rate, etc. It enables full-dimensional real-time monitoring and second-level data collection, provides multi-dimensional statistical reports and quantitative assessment, and guides enterprises to improve the three rates of process.

## Safety-Priority System (SPS)

The innovative concept of Safety-priority system provides a more systematic, more standardized, more reliable and more intelligent sustainable safety solution covering the entire life cycle of the enterprise for the construction of future factories, and builds a safe production barrier. The Safety-first system is based on the factory's full life cycle framework, covering planning, design, construction to operation and maintenance. By integrating industrial AI technology to build a systematic, digital and intelligent full life cycle safety defense system, through deep data analysis and integration, real-time monitoring and optimization of safety protection barriers, achieving integrated closed-loop control of all elements and all processes of safe production. The system includes software for production safety management, risk early warning analysis, agile emergency response, real-time location monitoring, etc., to assist in the intelligent and safe operation of industry.

Production safety management software follows the requirements of "industrial Internet + safe production", is based on enterprise value chain risk management, integrates 3D models, high-precision positioning, AI technology, and builds a data-driven safety management system through functions such as major hazard source management and dual prevention mechanism, strengthening digital and intelligent control of safety risks, Promote the digital transformation of enterprise safety production supervision towards pre-emptive prevention. The software integrates real-time monitoring, video surveillance and

other data through an APP to achieve informatization, digitalization and intelligence of safety management, supports data intercommunication and incorporates industrial AI technology to perceive production risks. Its value lies in systematic risk control, digitalization of system elements, list-based implementation of responsibilities and intelligent decision-making management, which helps enterprises achieve safe production and digital transformation.

The risk early warning analysis software quantitatively displays the production safety status of enterprises through core indicators such as statistics, modeling and analysis of education and training, risks and hidden dangers, emergency drills and safety accidents, detects and judges information that may lead to accidents in advance, issues early warnings in a timely manner, and helps enterprises take preventive measures quickly. The software features customizable early warning indicators, risk model building, visual monitoring of risk trends, step-by-step early warning release and intelligent report generation, enabling real-time control of safety production status, shortening early warning response time and assisting decision-makers in precise policy implementation.

Agile emergency software adheres to the concept of comprehensive emergency management, designs an integrated platform system, strengthens the enterprise's rapid response and collaboration capabilities, and covers the four stages of prevention, preparation, response, and recovery. It integrates command and dispatch, situational awareness, communication coordination, visualization and data application capabilities to cover the entire cycle of prevention, preparedness, response and recovery. The software features core functions such as AI-structured contingency plans, dynamic resource maps, personnel positioning, and process traceability, enabling precise push of emergency data, real-time control of resources, intelligent rescue decision-making, and rapid team linkage. It enhances monitoring and early warning, analysis and decision-making, and handling efficiency through data sharing and business collaboration, and builds an intelligent emergency management system.

The real-time location monitoring software is applicable to multiple industries and uses a variety of technical means to achieve high-precision positioning, monitor the number of people in the work area, personnel dynamics, distribution, inspection information and personnel gathering risk warnings, assist enterprises in personnel control, coordinated operation, risk management and precise rescue, and improve the level of safe production. The software features real-time location display, historical trajectory traceability, multiple alarm functions, one-click emergency call and vital sign monitoring and other security measures, and can be linked with apps such as AI video analysis, operation safety, intelligent inspection, providing rich management tools and 3D visualization display to enhance safety management capabilities and ensure personnel safety.

The advanced alarm management software meets national and Ministry of Emergency Management standards. Through an intuitive interface, intelligent algorithms and expert knowledge base, it optimizes enterprise alarm management, helps enterprises optimize alarm management, strengthens operator awareness, ensures that every alarm is reported, corrected and responded to, in compliance with national standards and Ministry of Emergency Management requirements. It can identify and eliminate invalid alarms, enhance operator response, achieve multi-condition adaptive alarms, and ensure that critical alarms are promptly communicated to responsible persons. Advanced alarm management software provides customized support for different levels to eliminate invalid alarms, improve alarm handling efficiency and device performance, achieve KPI quantification management of alarms across the entire plant, and enhance enterprise compliance and accident prevention capabilities.

The accident analysis software integrates data from DCS, SIS, and CCS systems to achieve full-process collection and intelligent analysis of alarms, operations, and SOE events, and builds a unified database. Core features include a centralized monitoring dashboard (real-time alarm statistics, trip report tracking), multi-system event timing analysis and custom monitoring schemes (automatically triggered data capture to generate reports), support for cross-platform root cause location and accident traceability, effectively shorten fault diagnosis time, reduce the risk of handling deviation, and simplify management processes through regularized automatic report generation The response efficiency and decision-making accuracy of industrial safety incidents are enhanced.

# 

The energy saving and Low Carbon system achieves a leap in energy efficiency throughout the entire industrial production process through the dual engines of factory-site collaborative optimization and digital intelligent energy and carbon management control. Build an intelligent regulation system based on industrial AI+ mechanism models to form a closed-loop optimization on the energy supply side such as boilers and pipe networks and the energy consumption side of the main equipment, improving energy efficiency by 2% to 20%; Dynamically balance the supply and demand of energy sources such as steam and hydrogen through multi-energy complementary optimization algorithms, reducing waste by 3% to 10%; The system integrates functions such as energy and carbon management and energy optimization to support enterprises in precise measurement, lean regulation and fine accounting; Achieve more than 30,000 tons of carbon reduction per plant per year; More than 200 projects have been implemented in 12 industries including petrochemicals, metallurgy and new energy, helping enterprises reduce costs by several hundred to tens of millions of yuan annually, empowering the green transformation of industry and the achievement of the dual carbon goals.

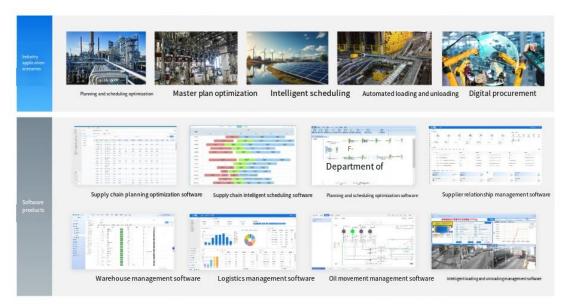

Carbon management software is a business tool specifically designed for enterprise carbon management, covering business scenarios such as carbon emissions management, carbon inventory, carbon footprint tracking, prediction, quota management, carbon asset and budget management. With a meta-model of 24 industry accounting guidelines and a carbon emission factor database built in, it helps enterprises quickly build their own carbon management systems, significantly improving carbon management, statistics, and anomaly analysis efficiency by more than 80%.

The energy management software, through indicator modeling design, enables digital management of the entire life cycle of enterprise energy, covering functions such as automatic metering, balancing, statistics and process monitoring. The software enhances the energy management level of enterprises, achieves lean control, reduces human input, meets the business needs of each link, and supports comprehensive energy efficiency management of multiple energy media, helping enterprises to produce efficiently and reduce energy consumption and emissions.

The pipe network simulation software, through real-time simulation and monitoring, effectively evaluates the design quality and performance of the pipe network, detects and optimizes unreasonable designs in advance, and achieves soft measurement of status, economic analysis, and early warning of safety risks. The software helps users enhance the digitalization and intelligence of pipe networks, assist in optimizing design, reduce costs, eliminate hazards, and ensure economic and safe operation.

The utility optimization software integrates the TPT large model to enable multi-scenario applications of "AI+ dispatching" and "AI+ control". In terms of energy scheduling, it enhances scheduling efficiency through simulation prediction, automatically generates balance strategies and contingency plans, responds quickly to anomalies, and improves scheduling efficiency by more than 40%. In terms of energy supply unit control, key operating parameters are optimized in real time based on hybrid models and optimization algorithms to ensure energy-efficient and optimized operation of device units, with boiler energy efficiency improved by more than 1% and cooling power consumption reduced by 10% to 18%.

# **(III)** Supply chain Management System (SMS)

A supply chain management system includes supply chain management products and supply chain optimization products. By combining AI with operational research optimization technology to build an integrated management and optimization model for enterprise supply chains, it helps enterprises achieve integrated optimization of production, supply and sales business, integrated information management, and closed-loop management of production and operation process planning - scheduling - execution - reporting - tracking, significantly improving planning completion rate, inventory turnover rate, order delivery rate, procurement efficiency, scheduling efficiency, While achieving an economic optimization strategy, it minimizes inventory costs and fully realizes the operation and management in the supply chain field with fewer people, standardization, efficiency and intelligence.

The warehouse management software covers material ordering, inbound, receiving, storage and shipping through full-process digital control, integrates strategy management modules such as location optimization, inventory taking, relocation and expiration date warning, intelligently completes inwarehouse business operations such as shelving, inventory taking and warning, and realizes real-time tracking of material flow and business collaboration. Based on intelligent algorithms, it boosts inventory turnover, optimizes the handling of overstocked materials, and enhances full-chain traceability capabilities, while strengthening the full life cycle control of dangerous goods to ensure precise, efficient, safe and compliant warehouse operations.

Oil online optimization blending software, based on real-time quality analysis and intelligent process control technology, provides a full-process intelligent blending solution for petrochemical enterprises, supporting global formula planning for multiple product series, economic/capacity multi-objective optimization, and dynamic quality compensation for tank bottom/pipeline oil. By integrating edge control (octane number, vapor pressure, etc.), adaptive blending rule libraries and domestic component oil optimization models, the success rate of the first blending is improved, quality grades are strengthened and variety production capacity is expanded. With precise edge control, material and energy consumption are reduced, driving the double growth of refinery economic benefits and production flexibility.

The oil product mobile management software builds a digital and intelligent control system for mobile operations in the petrochemical industry based on full-process data monitoring and intelligent algorithms, integrating tank farm management, path optimization (dynamic global main bypass calculation), task scheduling, anti-misoperation mechanism and MES collaboration module. Through precise anti-leakage monitoring and accident early warning, it reduces 50% of internal operation labor costs. Eliminate the risk of misoperation and potential accidents such as oil leakage/condensation line, optimize resource allocation through optimal mobile path planning, and drive the synergy of production safety, energy efficiency improvement and carbon emission reduction.

Logistics management software builds a full-chain digital control system for in-plant logistics in the chemical and process industries, integrating intelligent order processing, dynamic vehicle scheduling (qualification review/behavior constraints), inventory prediction optimization and real-time in-transit monitoring functions, achieving transportation automation, route precision and operation compliance through a visual scheduling platform combined with anti-fraud mechanism Effectively enhance delivery efficiency and punctuality, reduce the risk of human operation errors, and build a safe, transparent, efficient and collaborative intelligent logistics ecosystem.

The intelligent loading and unloading software takes the deep integration of automated equipment and digital systems as its core, building an intelligent control system for the entire logistics process within the factory. It integrates self-service terminals, logistics access control systems, automatic weighing systems, quantitative filling systems, and third-party integration and connection. Through the synergy of software and hardware, ensure the safety of loading and unloading operations, measure accurately, improve loading and unloading efficiency, standardize loading and unloading processes, prevent human cheating, and achieve data integration of multiple systems at the same time. By relying on intelligent algorithms to replace repetitive labor, labor costs are reduced by more than 30%, the risk of human operation deviation is eliminated, and flexible configuration solutions are provided to meet the personalized needs of enterprises, driving the overall improvement of loading and unloading efficiency, process compliance and cross-system collaboration capabilities.

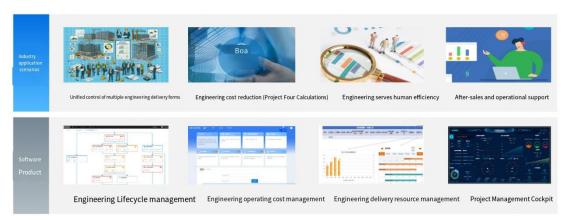

Supply chain planning optimization software is a linear programming tool software used to optimize the production, supply and sales of enterprise supply chains. Through business collaboration and data sharing, it optimizes production and operation plans, forecasts based on demand, conducts timeliness, cost-profit analysis through scheme research, and optimizes inventory and material supply. Use process-oriented modeling, multi-objective optimization strategies and visual reporting to achieve full online supply chain planning and optimized management of benefit targets. The software significantly boosts planning efficiency (>80%), enhances corporate benefits through multi-scheme optimization (1-3%), responds quickly to market changes, reduces losses, and helps enterprises make scientific and efficient decisions.

Supply chain intelligent scheduling software, based on orders, inventory and equipment operation, uses intelligent algorithms and rule engines to automatically optimize scheduling and achieve integrated management of business processes. It can be seamlessly integrated with multiple systems such as ERP and WMS, supports low-code rapid custom development, and is applicable to multiple industries. The software significantly improves production scheduling efficiency by 90%, plan completion rate by 95%, order delivery rate by 90%, and inventory turnover rate by 20%.

The planning and scheduling optimization software uses advanced algorithms to build a plant-wide planning and rolling scheduling model for petrochemical enterprises, quickly generating production scheduling plans and executable schemes, and optimizing raw material selection, processing flow, scheduling and production, and inventory prediction. Its features include process-oriented drag-and-drop modeling, integrated planning and scheduling, multi-scheme comparison, and custom reports. The software can optimize raw materials, product structure, production load and processing flow, as well as plant configuration and start-up/shutdown schemes, further reducing costs and providing strong operational decision support for enterprises.

Supplier relationship management software provides an information-based solution for enterprise procurement processes, covering four modules: supplier lifecycle management, strategic sourcing, supply chain and financial collaboration. It can be deployed independently and quickly or combined as needed to optimize collaboration between enterprises and suppliers, improve procurement efficiency, reduce costs, enhance supply chain controllability and transparency, and achieve full collaboration.

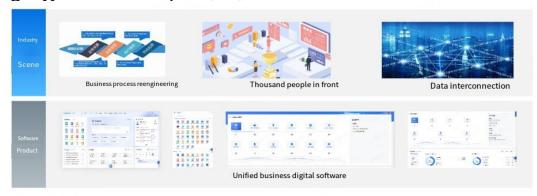

(11) Sales & Service System (SSS)

Sales & Service System (SSS) provides digital support for customer-facing interfaces for enterprises, achieving cost reduction and efficiency improvement while enhancing customer satisfaction through the application of automation and intelligence technologies.

Project management software is a digital application that integrates, refines, mobilizes and intelligently manages multiple projects and large teams, covering core functions such as lifecycle management, cost control, resource allocation and project management overview. It provides value such as full visualization of project progress, precise cost control, intelligent identification and early warning of risks, helps projects reduce costs and increase efficiency, builds project risk libraries, and effectively manages various risks including overdue acceptance, demand changes, payment delays, etc.

#### (12) Support & Guarantee System (SGS)

The Support and guarantee System enhances the efficiency of business management through digital and intelligent means; Based on unified business digital software, break down barriers to communication and collaboration among departments, regions, and organizations, and enhance multi-department and multi-role collaboration efficiency through standardized, convenient, and efficient business processes.

UBD, based on the "platform +APP" concept, integrates various business systems within the enterprise into one platform, truly achieving "one entry point, handle everything" seamless integration with OA, ERP, CRM, MES, etc., providing unified identity, unified to-do list, unified information, unified data and unified messaging, greatly enhancing office efficiency. UBD is suitable for scenarios involving frequent switching of multiple business systems, digital transformation, and group enterprises. The core advantage lies in the unified entry point, personalized approach, process center, and flexible configuration. UBD helps enterprises and employees improve work efficiency and management effectiveness while reducing costs and easing the burden of IT operations.

#### (3) Main business models

#### 1. Research and development model

The company continuously optimizes its R&D management system, closely focusing on the new architecture of "1+2+N" industrial AI-driven enterprise intelligent operation, the "4 big data bases", and the four core values of "safety, quality, low carbon, efficiency", accurately identifying the pain points and demands of process industry customers. Deepen the implementation of the IPD integrated product

development management model, establish a market-oriented R&D mechanism, incorporate product development into the investment management system, build a customer demand-driven agile development chain, and achieve a dual breakthrough in R&D efficiency improvement and cost optimization.

IPD encompasses managing requirements, managing markets, managing development, and managing platforms and technologies to achieve "doing the right thing", "doing the right thing", and "doing what others can't do".

Managing Requirements: A deep understanding of customer pain points and needs, and a rapid response to customer needs through end-to-end requirements management processes such as requirements collection, analysis and decision-making, and requirements fulfillment.

Managing the market: By understanding and segmenting the market, conducting portfolio analysis, formulating product business strategies and plans (Charter development), market-driven R&D ensures business success.

Management and Development: Through a structured product development process (concept stage, planning stage, development stage, validation stage, release stage, and lifecycle management stage), create high-quality products that meet customer needs and are competitive.

The company stratifies the technology system and product system, conducts technology insights and planning, continuously builds technology barriers and innovation points, completes technology pre-research and reserves in advance, and optimizes the R&D process and reduces R&D technology risks through the asynchronous development model. Actively carry out technological innovation research and development and technology validation of industrial AI applications, create competitive industrial AI products and solutions, build an internationally leading core technological advantage in industrial AI, thereby supporting the rapid growth of the company's performance.

# 2 Production and procurement models

The company mainly adopts the self-production model, organizing project production based on the production plan and delivery time, and completing the production, installation, commissioning and operation of the products in combination with on-site technical services of the project. The company has completed the expansion of its domestic digital smart factory and put it into operation, and is building new overseas smart factories. It is building the core capabilities of its global production base by continuously optimizing production processes, improving manufacturing techniques, and establishing a high-standard quality system, and actively promoting the intelligentization and lean production processes to enhance production efficiency and product quality.

The company coordinates procurement activities through the planning and dispatching department, the purchasing department, and the storage and transportation department. Relying on digital means to effectively enhance efficient collaboration between suppliers and purchasers, standardize the entire procurement process and the full life cycle management of suppliers, promote the standardization of business processes, and improve asset utilization efficiency and management efficiency.

#### 3. Sales model

The company mainly adopts a direct sales model to sell Industrial AI products and solutions to process industry customers, and builds a new one-stop industrial service model centered on PlantMate offline 5S stores, PlantMart online mall, and PlantMembership membership subscription. The PlantMate 5S store expands the radius of industrial customer service through the sales forward strategy, achieving agile response to demand and deep reach to customers; PlantMart online mall, relying on the core business model of "federated Reserve + preferred bestsellers", combined with AI digital intelligence software support, provides customers with industrial products, technologies and services covering the entire life cycle from design, procurement to operation and maintenance, forming an online and offline coordinated digital intelligence supply chain ecosystem.

The company innovatively introduced a membership subscription model, enhancing customer stickiness and promoting long-term cooperation by covering the entire customer life cycle service capabilities. The model effectively promotes the application of advanced industrial AI software,

equipment and technology in industrial scenarios. By the end of June 2025, a total of 938 subscription-based customers had been signed up, marking a strategic breakthrough in the business model.

The company fully implements and promotes the coordinated operation of the "Iron triangle" formation, concentrates marketing resources, precisely and deeply explores users' demands at different stages and to different degrees, continuously focuses on the mid-to-high-end market, and realizes strategic cooperation with multiple major customers and grid-based full coverage management of major projects. For overseas markets, the company has continued to increase its market layout and expansion in Southeast Asia, South Asia, the Middle East, Africa, Europe, Central Asia, America, Japan, South Korea, Mongolia and other overseas regions, and has established subsidiaries in Singapore, Saudi Arabia, India, Malaysia, Indonesia, Japan, Kazakhstan and other countries. In Thailand, Canada, Malaysia, Kazakhstan, Indonesia and other countries, 5S stores are set up overseas to vigorously promote and build local sales, operation, technical support and engineering service capabilities, and comprehensively enhance global customer stickiness.

#### (4) Analysis of the company 's industry position and its changes

After more than 30 years of development and accumulation, the company has established a solid customer base and wide influence in the process industry. The company has covered more than 37,000 customers in over 50 sub-sectors of the process industry; It has deployed more than 100,000 industrial control systems, approximately 100 million I/O points, and generated up to 100EB of data resources. Based on this, the company aims to become a global leader in industrial AI, using AI to drive sustainable industrial development. To build a new "1+2+N" industrial AI-driven enterprise intelligent operation architecture based on four data bases (operational data base DCS, equipment data base PRIDE, quality data base Q-Lab and analog data base APEX), forge core competitiveness of AI+ data, maximize data value, Provide solid support for the industrial AI strategy and help enterprises achieve the high-quality sustainable development goals of "safety, quality, low carbon, and efficiency". In an era of rapid advancements in AI technology, industrial control systems remain the key hardware foundation for the implementation and execution of all industrial AI technologies.

According to Rui Industry, in 2024, the company's core product, the distributed control system (DCS), achieved a domestic market share of 40.4%, ranking first in the domestic DCS market share for fourteen consecutive years. In 2024, the company's market share of DCS in the chemical industry reached 62.6%, an increase of 6.3 percentage points compared to 2023. In 2024, the company's market share of DCS in the petrochemical sector reached 56.2%, an increase of 6.9 percentage points compared to 2023; In 2024, the company ranked first in the market share of DCS in the four major industries of chemicals, petrochemicals, building materials and paper, and reached international advanced levels in terms of reliability, stability and availability. According to China Industrial Control Network, the company's core product, Safety Instruminstrumentation System (SIS), will have a domestic market share of 31.2% in 2024, ranking first in the domestic SIS market share for three consecutive years.

The company fully implements the new architecture of "1+2+N" industrial AI-driven enterprise intelligent operation, and widely applies a batch of industry-leading new products and new technologies such as general control system Nyx, time series large model TPT, million point real-time database and calorific value online analyzer to help enterprises build globally leading intelligent factories and create world-class industry benchmark projects. During the reporting period, the company's core product, the General Control System Nyx, continued to achieve a breakthrough of over 10,000 points in customer projects such as Zhejiang Petrochemical, Henan Jinhai New Materials, and Jien Pharmaceutical, and the time series large model TPT achieved breakthrough applications in over 110 projects of customers such as Ningxia Bailite, Guizhou Phosphate Chemical, and Xinlianxin Group, setting an example for the company's new business and new model. According to China Industrial Control Network, in 2024, the market share of core subsystems of the "1+2+N" industrial AI-driven enterprise intelligent operation architecture reached new highs. Among them, the intelligent autonomous operation system had a market share of 21.8% in China, the safety first system had a market share of 8.5%, and the energy conservation

and low carbon system had a market share of 5.8%. The production operation system has a 14.8% market share, all of which rank first in the Chinese market.

During the reporting period, the company continued to focus on process industries, signed major project orders mainly in the petrochemical, chemical, oil and gas, liquor, power, pharmaceutical and other industries, consolidated and expanded strategic partnerships with major customers, and promoted industrial AI innovation products to the market, achieving innovative breakthroughs with major customers such as petrochina Dushanzi Petrochemical and Shaanxi Coal Industry Group Yulin Chemical. While deepening the domestic market, the company has accelerated its expansion into the international market, achieving significant breakthroughs in the high-end market in many overseas countries, showcasing the company's new industrial AI brand image and practical value to the world and continuously enhancing its global influence. Some of the major projects for 2025 are as follows:

Industry/Region	Project Name	Project Meaning
Petrochemicals	Petrochina Tarim 1.2 million tons/year Phase II ethylene Project	The introduction of Nyx general control system and APL technology for the first time in a major petrochemical project is an important practice and promotion of the new intelligent operation architecture of the "1+2+N" enterprise, and a "demonstration project" for promoting the transformation and upgrading of petrochemical business and achieving high-quality development.
"Fine" Chemical engineering	Digital and intelligent construction of Hubei Xingfa Group  Henan Jinhai 100-billion-yuan fluorine and silicon new Materials Industry Project	The project is a benchmark demonstration of the application of the new architecture of "1+2+N" industrial AI-driven enterprise intelligent operation throughout the entire industrial chain and process of the chemical group, achieving a full subscription of industrial software for the 27 enterprises under the group, ensuring that Xingfa Group has access to the latest products and solutions of Supcon in any situation. It lays a solid foundation for the overall digitalization, intelligence, cost reduction and efficiency improvement of Xingfa Group, while significantly reducing operation and maintenance costs.  SUPCON Technology was involved in the complete design process in the early stage and the complete connection with the design institute, creating the first Nyx+ self-operation +TPT benchmark project in the chlor-alkali industry, and also the company's largest Nyx project (nearly 40,000 points).
Coal chemical industry	Shaanxi Coal Yulin 15 million tons/year Coal Quality Clean and Efficient Conversion Demonstration Project	By building a new architecture of "1+2+N" industrial AI-driven enterprise intelligent operation, integrating multimodal industrial big data and domain mechanism knowledge, a smart factory with self-perception, self-diagnosis and self-decision-making capabilities will be created. The "1+2+N" industrial AI-driven enterprise intelligent operation architecture will optimize the entire production chain, achieve seamless connection between Phase I and Phase II facilities, and promote the intelligent upgrade in the deep processing of coal.
Power	Fujian Energy Chemical Gulei	Through the transformation to achieve integrated centralized control of main and auxiliary units, optimize

	Thermal Power	the manpower structure, provide intelligent functions,
	Project	improve the stability of unit operation and economic
		benefits; This project marks the first full-function
		application of the OMC system in the intelligent thermal
		power industry.
		The signing of the new project lays a more solid
Building	Anbi 'an New	foundation for the cooperation of the second phase of the
Materials	Materials Smart	Anbi 'an Group project and will significantly enhance
Materials	Manufacturing Project	the digitalization and intelligence level of the panel
		industry.
Coal mine	Hubei SAN Ning Mining Big Data Platform and Large Model Decision Agent Innovation Application Project	A new breakthrough in the mining industry with the "1+2+N" industrial AI-driven enterprise intelligent operation architecture of SUPCON Technology, the industry's first AI+ production scheduling intelligent body and AI+ safety control intelligent body project based on large models combined with mining business innovation applications.
		For the first time, the company's control system products
	The GK3 and GR1246	have been included in the world's top 20 oil companies
Overseas	pipeline project of the	excluding Chinese companies, which not only indicates
Overseas	Algerian national Oil	customer recognition of the company's products, but
	and Gas Company	also opens up broad space for the company's expansion
		in the Middle East and Africa region.

Looking ahead, the company will continue to strive to meet the intelligent demands of the process industry, actively explore the development path from automation, digitalization to intelligence, accelerate the application of the "1+2+N" industrial AI-driven enterprise intelligent operation architecture, and continuously optimize and improve products and solutions based on "AI+ data" Empower users to achieve the goals of "safety, quality, low carbon and efficiency". The company will continue to provide customers with high-quality, efficient and intelligent digital transformation and industrial AI solutions to fully assist process industry enterprises in achieving sustainable and high-quality development, adhering to the development vision of "becoming a global leader in industrial AI and driving industrial sustainability with AI".

Added significant non-core business information Not applicable

### Discussion and analysis of business operations

In the first half of 2025, the global economy suffered downward turmoil such as tariff hikes, inflation, persistent geopolitical risks and slower-than-expected interest rate cuts. In the face of the complex and severe international situation, the domestic macroeconomy was relatively positive and stable, production remained resilient overall, and the "export rush" and "new economy rush" led to better-than-expected economic performance in the first half of the year, and the domestic market competition order continued to be optimized. The counter-competition in the consumer manufacturing sector continues. The country is vigorously supporting the development of industrial AI through a series of policies, promoting the intelligent transformation of manufacturing, and comprehensively coordinating the application and development of artificial intelligence technology in industries to enhance China's competitiveness in the global artificial intelligence field and contribute to the construction of the country's digital economy and innovative nation. As the "AI + Manufacturing" initiative moves into a new stage of high-quality development, the company is deeply

involved in the automation, digitalization and intelligentization transformation of global advanced manufacturing, actively responds to changes in demand from downstream industries, flexibly adjusts its business strategies, continuously advances internationalization, and constantly explores structural opportunities in downstream industries. Including opportunities brought about by policy and demand changes such as the localization of high-end equipment, equipment renewal, the development of western Xinjiang, and the overseas expansion of Chinese enterprises' equipment, we will focus on investing in high-prospect and high-potential businesses such as industrial AI+ data, robots, and industrial Agents, and continuously promote the implementation of new businesses, new technologies, and new products in various scenarios of process industries; At the same time, the company further promotes digital transformation, implements comprehensive budget control, intensifies cost reduction and efficiency improvement management, and continuously enhances the company's competitiveness and profitability.

During the reporting period, the company achieved a total operating revenue of 3.83 billion yuan, a decrease of 9.92% compared with the same period of the previous year. During the reporting period, the net profit attributable to shareholders of the listed company was 354.0826 million yuan, a decrease of 31.46% year-on-year. During the reporting period, the company focused on promoting new businesses with high prospects and potential such as industrial AI and robots. Among them, the revenue from the TPT business of industrial AI products was 116.6185 million yuan, and the revenue from robot products was 110.1454 million yuan.

#### (1) Full-stack application of artificial intelligence technology

During the reporting period, the company continued to increase its investment in research and development, with research and development expenses amounting to 419.655 million yuan, accounting for 10.96% of operating income; The number of R&D personnel was 2,119, accounting for 39.26 percent of the company's total workforce. In the era of industrial AI, the company is based on industrial automation control systems and relies on a broad user base covering more than 50 sub-sectors including petrochemicals, chemicals, power, medicine, metallurgy, oil and gas, and building materials. These customer resources not only accumulate a vast amount of industry data for the company, but also provide rich application scenarios. With more than 100EB of industrial data accumulated on 100,000 sets of industrial automation control systems, the company has the richest industrial real-time data in various subsectors of process industry. Based on the core concept of "AI+ data", the company deeply integrates a large amount of industrial data, industrial knowledge, industrial experience, industrial control models and process mechanism models, and conducts technological research and development for the entire life cycle of "research and development, design, operation and maintenance" of the process industry to create powerful industrial apps /Agents. Ultimately, an "industrial AI brain" is formed, and through the deep integration of industrial AI and robots, it promotes all-domain scheduling and management decisionmaking in factories and drives the process industry towards "less human, unmanned, and highly intelligent". Explore in All directions in the field of industrial AI, use the latest AI technology to reshape all products and technologies of the company, actively introduce top R&D talents in high-end automation control systems, industrial software, artificial intelligence and other fields at home and abroad, readjust the R&D team, reconstruct the R&D system, and push the full-stack of products and technologies towards "AI in All".

# (2) Continue to focus on process industries and explore structural growth points in downstream industries

During the reporting period, the investment scale of medium and large-scale projects of domestic process industry enterprises increased, but the investment progress slowed down. Relying on the advantages of being a leading enterprise and multi-product intelligent manufacturing solutions, the company explored structural growth opportunities such as coal chemical industry in Xinjiang, equipment renewal and upgrading and transformation of the petrochemical refining industry to ensure the stable operation of the business. ① In terms of products, the state actively promoted the renewal of control system equipment, and process industry enterprises had a high acceptance of this policy. They

comprehensively strengthened the domestic market development of large PLCS, and the market share of large PLCS increased year by year. Control systems (control systems and control systems + instruments) achieved revenue of 1.498 billion yuan; Industrial software (industrial software and control systems + software + others) achieved revenue of 1.032 billion yuan; Instruments and meters generated 677 million yuan in revenue. ② In terms of industries, the company comprehensively reviewed the opportunities of equipment renewal projects in multiple industries such as petrochemical, chemical, metallurgy, and energy. The revenue in the petrochemical, chemical, and metallurgical industries was stable, while the prosperity in the energy, building materials, and paper industries was good. The revenue continued to grow. The revenue in the energy industry increased by 9.32%, and the revenue in the building materials industry increased by 82.58%. Revenue in the paper industry increased 77.56%; This is mainly due to the fact that there are still opportunities for upgrading and transformation in the advantageous industries of petrochemicals and chemicals, as well as structural demand growth in energy, building materials, papermaking and other industries.

#### (3) Comprehensively upgrade the marketing service system to understand customer needs

#### ① PlantMate - 5S store operations

During the reporting period, the company's domestic marketing performance was good. The company has covered more than 37,000 customers in the process industry sector, and the customer coverage rate has further increased. By the end of June 2025, a total of 200 5S stores had been opened worldwide, including 157 partnership 5S stores, which greatly enhanced the enthusiasm of employees for entrepreneurship and significantly increased customer stickiness and brand influence globally. During the reporting period, the company deepened the implementation of the "1+2+N" industrial AI-driven enterprise intelligent operation new architecture and comprehensively advanced the strategic transformation of the company's new products and new models. We have achieved deep strategic cooperation with key customers such as China National Petroleum Corporation, Wanhua Chemical, Shaanxi Coal Group, Xingfa Group, Hubei Sanning, Henan Jinhai New Materials, and Anbi 'an Group. Among them, the Jinhai Fluorosilicon new Materials project is the first Nyx+ autonomous operation +TPT benchmark project of Supcon and also the company's largest Nyx project (nearly 40,000 points), creating an international first-class intelligent factory.

# 2 PlantMart - Operation of the S2B online platform

For the S2B business, the company focused on enhancing its service capabilities for state-owned and central enterprises in the first half of 2025, actively participated in market competition, and successfully stood out in the annual bidding projects of some central enterprises, smoothly obtaining the corresponding share. The company has comprehensively deepened its online + offline full life cycle service model, continuously optimized its digital and intelligent supply chain system, and further strengthened the online-offline interaction effect. In terms of logistics network construction, we will increase investment and expand network coverage. The company continues to deepen its cooperation with process industry customers, providing more solid support and guarantee for their digital procurement transformation, helping customers enhance their competitiveness in the digital wave and achieve cost reduction, efficiency improvement and sustainable development.

# ③ PlantMembership - Fully promote subscription/annual fee business

During the reporting period, the company introduced a subscription/annual subscription model for industrial software, aiming to provide customers with an outstanding service experience through continuous software iteration and upgrading. The model significantly enhanced the deployment efficiency and long-term value of the software in the digital transformation of the enterprise, not only bringing new growth potential to the company, establishing a long-term stable source of subscription revenue and a predictable cash flow foundation, but also building a robust, sustainable, highly sticky, platform-based business model.

To deeply empower strategic customers in the process industry, the company launched a tiered software product subscription/annual fee service for customers of different sizes, providing a diverse

portfolio of high-value software packages, along with software product marketing campaigns, which not only met the high return demands of different customers, but also achieved rapid growth in the software business. The subscription/annual subscription sales model enables customers to achieve significant value such as "substantial reduction in software investment costs, zero software operation and maintenance costs, unlimited software upgrades, and regular free updates and upgrades of industrial software products within the package." This model effectively enhances customer stickiness, supports long-term cooperation, accelerates the application of industrial software, and fully supports the process industry to achieve high-quality sustainable development of "safety, quality, low carbon, and efficiency".

#### (4) Long-term key areas for future development

#### (1) Industrial AI+

In terms of industrial AI products and technologies, against the backdrop of the continuous deepening of national strategies such as "intelligent manufacturing", "new quality productivity", and "dual carbon goals", the demand for intelligent solutions from industrial enterprises is showing a rigid and urgent growth trend. In the first half of 2025, the company will fully promote the integration and upgrading of industrial AI products and the transformation of business models, strive to build the commanding heights of AI technology in process industries, and focus on the "AI+5T" technology system. The leap of the TPT (Time-Series Pre-trained Transformer), a large model for the process industry, from a technical concept to a mature product, has achieved large-scale commercial application in the core scenarios of the intelligent upgrade of the process industry. TPT integrates massive production operation, process, equipment and quality data from different industries for fusion pre-training, deeply learns the general rules of industrial device operation, and builds reliable models that integrate mechanisms and meet the requirements of industrial applications.

In terms of marketing, the company actively explores and practices innovative AI marketing models, promotes software subscription through precision marketing and value marketing, intensifies marketing promotion activities, deepens industrial AI strategic cooperation with leading industry customers, and enhances the brand influence of AI products; Establish a dual-track sales system covering core customers in the "8+1" region, collaborate with ecosystem partners to complement and co-create, explore incremental markets, and enhance service response efficiency and customer stickiness. Since its official launch a year ago, TPT has achieved closed-loop application in various production and operation scenarios, successfully implemented over 110 projects in industries such as petrochemicals, coal chemicals, chlor-alkali, and thermal power, and has fully entered the stage of large-scale application. TPT has been put into use in projects of leading customers such as Sinopec, petrochina Lanzhou Petrochemical, Wanhua Chemical, Hubei Sanning, Inner Mongolia Yitai Chemical, and has played an irreplaceable role in ensuring production safety, improving product quality, reducing energy and material consumption, enhancing equipment maintenance efficiency and achieving autonomous operation during the reporting period. TPT software generated revenue of 116.6185 million yuan.

On August 28, Supcon Technology released the world 's first time sequence Hybrid Expert large Model (MoE) -driven industrial Agent generation platform (TPT 2), which, by deeply integrating multiple technical systems such as simulation, optimization, control, prediction, evaluation and statistics, can cover all production facilities in process industries and various complex industrial scenarios. It provides solutions to industrial problems in one sentence, generates executable industrial agents and applications, reshapes industrial software architecture and application models, and equips each position with a powerful expert-level "assistant". TPT2 can meet the demands of smooth control, efficiency optimization, quality improvement, energy conservation and carbon reduction in the production operation process, reduce reliance on expert experience, automatically identify and handle anomalies, significantly enhance the autonomous operation capabilities of the equipment, and reshape the industrial production paradigm with scenario-based intelligent solutions. This is a major advancement in the deep integration of the latest general-purpose AI technology with industrial scenarios, providing a powerful impetus for the intelligent transformation and upgrading of process industries.

#### 2 Industrial robots

The robot business continued to grow at a high speed in 2025, achieving revenue of 110.1454 million yuan in the first half of 2025 and signing new orders worth 200 million yuan, surpassing the full-year performance of 2024. During the reporting period, the company continued to upgrade and scale up the process industry robot solution "Plantbot" around the three major directions of "AI+ platform + hazard inspection and operation, supply chain logistics, humanoid robot equipment". The PlantbotStudio integrated scheduling management platform has been iterated to version V2.2, with new multi-machine collaboration, digital twin, and predictive maintenance modules, enabling minute-level deployment and second-level scheduling of multiple heterogeneous robot clusters. In August, the company and Saudi Aramco jointly developed and released the new generation of intelligent inspection robot ARAMCOBOT GEN2, which was deployed at Saudi Aramco. Quadruped robot dogs, wheeled robots and unmanned aerial vehicles have formed a multi-machine collaborative three-dimensional inspection and logistics network, which is widely used in complex scenarios such as petrochemicals, fine chemicals and electronic manufacturing. At the same time, AI vision algorithms based on large models have improved accuracy to 99.2% on tasks such as defect identification and behavior analysis. In 2025, the company successfully won several tens of millions of smart supply chain logistics robot projects, including Guangdong Baiyun Technology's dark logistics robot system and TBEA's ultra-high voltage intelligent logistics system, and delivered the industry's first shuttle robot inspection at Sinopec Zhenhai Refining & Chemical Tank Farm. The company's delivery of the quadruped robot for the intelligent inspection of electrolytic cells to Hangzhou Electrochemical Group received special coverage on CCTV2.

This year, the company continued to use robots as the core carrier to deepen the integration of "AI+ robots" for process industries, achieving phased results in multimodal perception, mechanism models and field predictions, significantly enhancing safety efficiency and digitalization levels. Looking ahead, the company will fully introduce embodied intelligence, break through the collaborative closed loop of robots with field equipment and control systems, achieve more efficient, accurate and reliable prediction of field production status, comprehensively enhance the efficiency of enterprise operation supply chain, transform digital productivity into field productivity, and create a future factory with zero hidden dangers and high efficiency for customers.

#### **3** Continuously explore high-potential overseas markets

In the first half of 2025, the company will continue to advance and deepen its internationalization strategy. ① Global operational capabilities will continue to grow. The company 's international marketing system focuses on regions such as Southeast Asia, the Middle East, Central Asia, Europe, the Americas, and Japan. The company's overseas team consists of nearly 300 people, and it has set up six subsidiaries in countries such as Singapore, Saudi Arabia, and Kazakhstan, significantly enhancing its overseas localization operation capabilities. ② Breakthrough in overseas markets. In the Southeast Asia region, the company has won the APC project of SAMATOR. Indonesia's largest industrial gas manufacturer, covering 10 of its plants, helping to enhance capacity efficiency and accelerate digital transformation. In the Middle East and Africa region, with significant expansion of new customers, the company, in collaboration with AVIC International, won the GK3 and GR1246 pipeline project of the Algerian national oil and gas Company, marking the first time that its control system has entered the top 20 global oil companies outside Chinese capital; Saudi Aramco executives visit Supcon Technology to deepen cooperation in industrial automation, intelligence and AI; At the same time, significant progress has been made in the certification of the company's core products such as DCS, TPT, ESD, CCS, and the registration of the Saudi Arabian manufacturing plant demonstrates the full-chain verification of local manufacturing capabilities for overseas high-end customers. In the Central Asia region, the company has secured a 3 million cubic meter gas processing project in Kazakhstan, the first overseas over 10,000 point oil and gas control system project, the first overseas deep cryogenic unit project for gas processing, and the first overseas complete OTS project. In Latin America, the company successfully entered the shortlist of suppliers for Mexico's PEMEX and CEMEX, and reached key milestones in cooperation with leading

companies such as Brazil's Petrobras, Suzanos and Concregell; Accelerate the presence of local channel partners in Brazil, Peru, Mexico and Colombia to enhance market reach. In the North American region, enhance brand influence through international exhibitions and promote UL, CRN, CSA and other certifications to achieve results. The company is actively seeking partnerships with global industry highend product and technology suppliers to expand its international ecosystem and global layout and operation capabilities.

#### **4** Ecosystem cooperation

The company has launched its global ecosystem partner "CLUSTAR• Star River Program". The company continues to deepen the construction of its global ecosystem cooperation system and has achieved phased results in multiple dimensions such as channel ecosystem, new service ecosystem, product technology ecosystem, university and research institute ecosystem, and all-domain supply chain ecosystem, building an ecosystem cooperation network covering all scenarios and multiple roles. During the reporting period, it released the AAS abnormal working condition disposal solution with Haifan Technology, jointly built the instrument intelligent recognition solution with Dahua, and launched the intelligent manufacturing joint solution with Yonyou; Promote the integration of PRIDE, TPT with partners such as Tianze Zhiyun, Peimu Technology, and Bohua Technology, and by leveraging their respective capabilities and strengths, work with partners to create benchmark projects and achieve resource sharing and value co-creation. The company has also innovatively built an ecosystem of universities and research institutes, creating a new model of "industry-university-research-use" cooperation, while continuously building the APL ecosystem, which has attracted more than 50 partners to join. In the future, the company looks forward to working with partners to explore new paths of win-win cooperation and jointly create a new chapter of industrial development.

#### (5) Enhance digital operation capabilities in all aspects

In the first half of 2025, the company will accelerate its digital transformation, build digital organizations and processes, strengthen the construction of overseas digital platforms, deliver 11 digital projects including marketing, R&D, supply chain, engineering services, operations, finance, human resources, etc., and deeply apply agents in sales, procurement, office and other businesses. Enhance the company's intelligent operation level through AI technology and build a digital and intelligent central control.

During the reporting period, the company's comprehensive budget was centered around the strategic transformation goal of industrial AI, ensuring the management loop of "strategy - plan - budget - performance", promoting the implementation of strategy, clear responsibilities, simplified management, and activated organization, better managing the uncertainty of the external environment, reducing the blindness and arbitrariness of decision-making, moving from opportunity-driven scale growth to strategy-driven effective growth, Balancing current business goals with long-term development, improving the company's overall performance and management level, and focusing on the goals of "uncovering operational fog", "comprehensive budget management", "end-to-end cost reduction and efficiency improvement", the operational management capabilities have been continuously deepened and the operational quality has been improved.

In the second half of 2025, the company will continue to firmly implement the industrial AI development strategy, closely centering on the comprehensive strategic transformation goal of "product-oriented, platform-oriented, industrial AI company", based on industrial automation technology and relying on deep industrial data accumulation, accelerate the deep integration and application scenarios of artificial intelligence technology with industrial scenarios, Build an intelligent ecosystem of the entire industrial value chain, integrate the multimodal and strong reasoning capabilities of large AI models, create a new architecture of "1+2+N" industrial AI-driven enterprise intelligent operation, create a smarter "industrial AI brain", and fully form core solutions of "AI+ safety, AI+ quality, AI+ low carbon, AI+ efficiency", Contribute Chinese wisdom to the "intelligent transformation" of global industry.

# Analysis and Outlook of Changes in Financial Indicators under non-Enterprise Accounting Standards

Not applicable

Material changes in the company 's operating conditions during the reporting period, and events that occurred during the reporting period and are expected to have a material impact on the company's operating conditions

Not applicable

# Analysis of core competitiveness during the reporting period

#### (I) Core Competitiveness Analysis

#### 1. Technological and R&D advantages

During the reporting period, the company successively passed the Ministry of Industry and Information Technology 2024 Manufacturing Enterprise Quality Management Capability Evaluation (Guarantee level), Zhejiang Provincial Key Laboratory, and received honors such as Zhejiang Provincial Artificial Intelligence Service Provider.

In recent years, the company has been deeply engaged in the field of industrial AI, constantly enhancing its scientific research and innovation capabilities. It has led and participated in a number of national and provincial-level scientific research projects such as the National Key Research and Development Program, the Industrial Internet Innovation and Development Project, the Special Project for high-quality Development of Manufacturing, and the Provincial "Sharp Soldier" and "Leading Goose" Research and Development Breakthrough Program, providing a strong impetus for the company's technological innovation.

#### (1) Rich technical reserves

The company is committed to meeting the industrial digitalization demands of process industries. Based on automatic control systems, it focuses on developing industrial AI technologies and products, forming intelligent manufacturing solutions with multi-industry characteristics. It has strong R&D capabilities in communication technology, electronic information, software technology, artificial intelligence, etc., and possesses a solid technical foundation and product development capabilities. The company has always been committed to breaking through the technological barriers of multinational companies through independent innovation, continuously increasing investment in research and development and the construction of research and development platforms, establishing two core product lines of industrial automation and industrial AI, and possessing a national enterprise technology center, a national and local joint engineering laboratory, a Zhejiang Provincial Key Laboratory, a provincial enterprise research institute, and a provincial high-tech research and development center. The well-structured R&D framework provides a good platform for the company's R&D activities, and it has successfully obtained a series of invention patents, technical awards, product certifications and international and national standards.

As of the end of June 2025, the company has led the formulation of 10 international standards, undertaken and participated in the release of 93 national standards and 2 industry standards; During the reporting period, 15 national standards and 5 group standards were compiled. The company has 738 patents, including 600 invention patents, 107 utility model patents and 31 design patents; It holds 768 Copyrights for computer software.

#### (2) Continuous independent research and development capabilities

In terms of R&D personnel, the company has a high-quality R&D team, forming a talent echelon covering market research, demand analysis, technology research, product development, manufacturing, product testing, and system integration. As of the end of June 2025, there were 2,119 R&D personnel, accounting for 39.26 percent of the company's total workforce. It provides a talent pool for scientific research and innovation. Most of the core technical personnel have been with the company for more than

15 years. The high-quality R&D team and human resources have laid the foundation for the company's continuous independent research and development.

In terms of R&D investment, the company spent 419.655 million yuan on R&D in the first half of 2025, accounting for 10.96% of its operating income. The continuous R&D investment has provided strong support for the company's R&D and innovation activities.

In terms of research and development facilities, the company has more than 17,500 square meters of research and development facilities (office space and laboratories), equipped with a large number of advanced testing equipment at home and abroad, and has a laboratory accredited by the China National Accreditation Service for Conformity Assessment (CNAS); It has a series of specialized laboratories including reliability life Laboratory, Industrial communication and Network laboratory, information integration and factory Modeling Laboratory, Industrial Control Security laboratory, intelligent manufacturing Innovation Laboratory, and has built an industrial AI big data application laboratory to conduct big data analysis, verification and application of process industry based on large models.

In terms of research and development projects, the company has led and participated in a number of national and provincial scientific research projects in recent years, including the National Key Research and Development Program, the National Science and Technology Major Project, the Industrial Foundation Strengthening Project, the Industrial Internet Innovation and Development Project, and the Zhejiang Provincial Key Science and Technology Special Project. As of the end of June 2025, the company is leading and participating in a number of research projects of the Ministry of Industry and Information Technology, the Ministry of Science and Technology, etc. The rich research projects have provided a strong impetus for the company's technological innovation.

#### 2. Long-term data accumulation

In the process of the company's establishment and development, as an industrial control system widely used in the industry, it not only provides important guarantees for national industrial security, but also creates huge value. More importantly, in the era of industrial AI, industrial control systems are the hardware foundation for all AI implementation and execution, which is a unique and significant advantage that the company possesses. In addition, with a broad user base and over 100EB of industrial data running on 100,000 industrial control systems - equivalent to about 1.27 million years of continuous recording of 4K high-definition images - the company is now the industrial real-time data company with the richest data in various segments of the process industry. At the same time, the company is accelerating the establishment of a complete industrial data collection and tagging system and has launched "four big data bases" consisting of the all-equipment intelligent perception platform (PRIDE), the intelligent operation management and control system (OMC), the all-process intelligent quality monitoring platform (Q-Lab), and the process industry process simulation and design platform (APEX). With the core concept of maximizing data value, it leads the process industry to accelerate "intelligent transformation".

The company uses massive amounts of data to drive the wide application of industrial AI technology in key areas such as safety supervision, quality control, predictive maintenance of equipment, energy and carbon optimization, and production tuning, achieving an upgrade from basic monitoring and control to complex optimization applications and significantly improving production efficiency and product quality.

### 3 Industry knowledge and expert reserves

With extensive industry coverage, deep industry penetration and abundant resources of industry experts, the company has formed a unique advantage in the development of industrial AI in the process industry. The company has more than 37,000 customers, covering more than 50 sub-sectors including petrochemicals, chemicals, power, pharmaceuticals, metallurgy, oil and gas, building materials, etc. These customer resources not only provide the company with a vast amount of industry data, but also offer a wide range of application scenarios, facilitating the company's deep penetration in various industries.

At the same time, the company has gathered a large number of industry experts who, with their deep industry experience and expertise, provide solid support for the company's product development and solution design. Relying on a systematic team of industry experts, the company is able to accurately grasp the core demands of various industries and achieve a full-process intelligent upgrade from production

process automation to enterprise operation automation. Based on massive industry data, rich application scenarios and professional support from the expert team, the company continuously rolls out innovative products and solutions driven by both technological innovation and industry opportunities. By integrating industry expertise and building a high ground of industry expertise, the company provides strong technical support and expertise reserves for business platforms and marketing platforms. These measures not only enhance the company's core competitiveness, but also provide customers with more valuable industry-specific integrated product solutions, becoming the core driving force for the continuous optimization and development of the company's products and solutions.

#### 4. A complete industrial AI product system

Process industry enterprises are moving towards a new stage of less human, unmanned and autonomous operation while ensuring safe, efficient and high-quality production, and the core of all this lies in the application of AI technology in industrial scenarios. Based on the technological development of industrial AI and the company's latest strategic guidance, the company is the first in the world to propose a new architecture of "1+2+N" industrial AI-driven enterprise intelligent operation, where "1" represents one factory operating system, achieving unified industrial data integration and laying a strong data foundation for industrial AI. "2" includes two core large models, the Time-series large model TPT (Time-Series Pre-trained Transformer) builds the base of the industrial AI model, deeply mines the value of industrial data, and realizes Process automation (PA), Help users achieve safe, efficient, and high-quality autonomous operation of the production process. The Hyper Graph Transformer (HGT) enables Business automation (BA) to help users achieve business excellence. "N" stands for N industrial apps /Agents that cover the entire industrial scene. They are like "special forces" in the smart factory, capable of exerting their expertise in their respective vertical fields and working together to make the factory smarter and more intelligent.

Through the deep integration of AI and robotics, the company promotes "PA+BA" all-domain scheduling and management decision-making to help enterprises achieve a comprehensive upgrade from traditional manufacturing to intelligent manufacturing. The company's Plantbot robot solutions and humanoid robot products have now been successfully applied in high-risk operation scenarios and smart factory construction. In collaboration with Saudi Aramco, the company has launched the second-generation explosion-proof inspection robot, which is 60% lighter, has doubled battery life, and has upgraded explosion-proof from IIB T4 to IIC T6, further enhancing product performance. During the reporting period, the company provided robot solutions to major petrochemical enterprises such as Sinopec Zhenhai Refining & Chemical, Aramco, Hangzhou Electrochemical Group, Xingfa Group, and Anbian New Materials Group, helping them achieve more precise automation and intelligent production. These innovative applications not only enhanced the production efficiency and safety of enterprises, but also provided new ideas and solutions for the intelligent transformation of process industries.

The company conducts technological innovation and product development throughout the entire life cycle of "R&D, design, operation and maintenance" for the flow industry, builds a powerful "industrial AI brain", drives the process industry towards "less manpower, unmanned operation and high intelligence", and comprehensively forms core solutions of "AI+ safety, AI+ quality, AI+ low carbon and AI+ efficiency" Drive the transformation of production models in the process industry. At the same time, accelerate the development of new materials, the design of new processes and the redesign of factories in the process industry through AI technology innovation to help the sustainable development of the process industry.

# 5. Deep customer base and rich project experience

With over 30 years of deep accumulation, the company has covered more than 37,000 customers in the process industry, serving dozens of key industries such as chemicals, petrochemicals, oil and gas, power, pharmaceuticals, metallurgy, building materials, papermaking, new materials, new energy, and food, further increasing customer coverage. The company has deepened strategic cooperation with many leading enterprises such as China National Petroleum Corporation, China Petroleum & Chemical Corporation, China National Offshore Oil Corporation, Sinochem, Hengli Petrochemical, Wanhua

Chemical, Shanghai Huayi, China Resources, Shandong Energy, China Coal Energy, Hubei Xingfa, Tongkun, Zhejiang Energy, Wuliangye, Luzhou Laojiao, Rongsheng, Tianxin Pharmaceutical, etc. Through joint innovation, it provides all-round intelligent manufacturing products and solutions. To help customers achieve intelligent transformation. At the same time, the company has built a sales and service organizational structure of a global marketing system by creating two systems: industry solutions and global 5S stores, achieving full coverage of domestic chemical industrial parks and layout in key overseas regions. By the end of June 2025, a total of 200 5S stores were opened worldwide, 157 of which were partnership 5S stores, significantly enhancing customer stickiness and brand influence globally. The company continues to promote the new model of 5S store "partnership" to boost the entrepreneurial enthusiasm of its employees. In addition, the company has deepened the implementation of the "1+2+N" industrial AI-driven enterprise intelligent operation new architecture, and comprehensively advanced the strategic transformation of the company's new products and new models. In key major clients such as petrochina, Wanhua Chemical, Shaanxi Coal Group, Xingfa Group, Hubei Sanning, Henan Jinhai New Materials, Anbi 'an Group, Zhejiang Hongzun Technology, the Jinhai Fluorosilicon new Materials project is the first Nyx+ autonomous operation +TPT benchmark project of Supcon and also the company's largest Nyx project (nearly 40,000 points), Build an international first-class intelligent factory. The company is also vigorously promoting a new marketing model of "software membership subscription". As of the end of June 2025, it has signed up a total of 938 subscription customers to help enterprises achieve the digital transformation goals of "safety, quality, low carbon and efficiency" with more comprehensive products and better services. At the same time, deepen customer strategic partnerships and sign strategic cooperation agreements with key enterprises such as Huatai Yongchuang, Beijing Yezi Oubo, and Huisen Clean Energy to promote the in-depth application and standardization process of industrial AI technology in various industrial fields.

The company is fully advancing its international strategic layout, and its overseas business has reached a new level again. In the Southeast Asia region, the company has acquired the APC+supOS project from SAMATOR, Indonesia's largest industrial gas manufacturer, covering 10 plants, helping it enhance capacity efficiency and accelerate digital transformation. In the Middle East and Africa region, new customer expansion is significant. The joint bid with AVIC International for the GK3 and GR1246 pipeline project of the Algerian National oil and gas company marks the first time that the company's control systems have entered the top 20 global oil companies outside Chinese capital, significantly enhancing the overseas expansion and regional development potential of the SUPCON brand; Saudi Aramco executives visit SUPcon to deepen cooperation in industrial automation, intelligence and AI; At the same time, the company has made progress in the certification of core products such as DCS, TPT, ESD and CCS, and completed the registration of manufacturing plants in Saudi Arabia, demonstrating the full-chain verification of local manufacturing capabilities for overseas high-end customers. In the Central Asia region, the company has obtained the 3 million cubic meter gas processing project of the Kazakhstan Gas Processing Plant, which is the company's first overseas control system project for the oil and gas industry with over 10,000 points, the first overseas deep cryogenic unit project for gas processing, and the first overseas complete OTS project, having a profound impact on the expansion of the Central Asia market. In Latin America, it successfully entered the shortlist of suppliers for PEMEX and CEMEX of Mexico, and reached a key milestone in cooperation with regional leaders such as Petrobras, Suzanos and Concregell of Brazil; In Brazil, Peru, Mexico and Colombia, local channel partners are being accelerated. Three of them have completed order cooperation, enhancing market reach. In the North American region, enhance brand influence through international exhibitions and promote UL, CRN, CSA and other certifications to achieve results, laying a solid foundation for market breakthrough in the North American region in the second half of the year.

The company continues to advance its globalization strategy and enhance its brand's international influence. In the first half of 2025, participate in several major international exhibitions: attend the ARC Industry Leadership Forum in the United States in February to showcase research and development achievements and exchange ideas with global industry leaders; April at the Hannover Messe in Germany,

showcasing full-stack industrial automation solutions such as UCS, TPT, Plantbot intelligent robots, attracting international media attention to industrial AI innovation; May participate in the Saudi Aramco Energy Technology Forum in Shanghai, showcasing the strength of smart factory technology; Expand into North America through the Canadian Global Energy Show in June, focusing on smart automation, energy management and digital control innovation; In addition, attend the China-Brazil Business Seminar and the Chilea-China Business Summit to discuss industrial digital transformation with Latin American political and business leaders and deepen China-Latin America cooperation.

#### 6 Global ecosystem of cooperation

In the current volatile global situation, the political and economic landscape of different countries' markets is changing rapidly, and industrial products are diverse and frequently updated. If a company chooses to go it alone, it often finds itself struggling and may even end up in a situation of resource depletion. Against this backdrop, global ecological cooperation has become an inevitable choice to adapt to the trend of The Times. It connects innovative wisdom with vast markets, enabling enterprises to focus on their own specialized fields and, through cooperative ties, achieve seamless integration of global resources and share the fruits of advanced technologies and diversified channels. Over the years, the company has always attached great importance to global ecological cooperation, adhering to the concept of openness, cooperation and win-win, actively engaged in strategic cooperation with well-known domestic and foreign enterprises as well as upstream and downstream enterprises in the industrial chain, and achieved a series of mutually beneficial and win-win cooperation results.

During the reporting period, the company continuously deepened the construction of its global ecological cooperation system, achieving phased results in multiple dimensions such as channel ecosystem, new service ecosystem, product technology ecosystem, university and research institute ecosystem, and all-domain supply chain ecosystem, and building an ecological cooperation network covering all scenarios and multiple roles. The company has significantly enhanced its ecosystem vitality through systematic channel compliance management and partner recruitment activities. The product technology ecosystem has deepened collaborative innovation around the scenario requirements of "AI+ safety, AI+ quality, AI+ low carbon, AI+ efficiency": released AAS abnormal working condition handling solution with Haifan Technology, jointly built instrument intelligent recognition solution with Dahua, and launched intelligent manufacturing joint solution with Yonyou; Promote the integration of PRIDE, TPT with partners such as Tianze Zhiyun, Peimu Technology, and Bohua Technology; Host multiple "Ecosystem into Central Control" events and work with partners to create benchmark projects. The company has also innovatively carried out ecological construction of universities and research institutes, creating a new model of "industry-university-research-use" cooperation: signing a memorandum of understanding on industrial AI with Tongji University, co-compiling the industrial control textbook "Computer Control Systems" with Zhejiang University, and planning the "Supcon Cup" industrial AI innovation challenge. In addition, the company continues to build the APL ecosystem, which has attracted more than 50 partners to join. In the future, the company looks forward to working with partners to explore new paths of win-win cooperation and jointly create a new chapter in the development of the industry.

# (II) Events that caused significant impact on the company's core competitiveness during the reporting period, impact analysis and countermeasures

Not applicable

#### (III) Core technologies and research and development progress

1. Core technologies and their advancement and changes during the reporting period

#### (1) Process industry time series large model technology

Based on deep insights into industrial scenarios and strong data interpretation capabilities, establish an industrial data annotation system, create data annotation tools, build large-scale high-quality industrial

data sets, and lay the foundation for the construction of larger-scale and more generalized time series large models. At the same time, a more advanced hybrid Expert Model (MOE) architecture is adopted to improve the design, enabling in-depth mining of the interrelationships and patterns of large-scale industrial data of different industries and types in the temporal and spatial dimensions, which can handle complex and changeable industrial scenarios more accurately and efficiently, and significantly enhance their understanding, reasoning and decision-making capabilities. Significantly reduce reliance on expensive computing resources. Backed by TPT's cross-task and cross-scenario integration capabilities, reconfigure the industrial software system, break through the key links of "perception - analysis - decision-making - execution", develop industrial agents that support highly autonomous operation of devices, drive the transformation of production models in process industries, and accelerate the transformation towards "less human, unmanned, highly intelligent".

#### (2) Multi-scale fusion technology of AI and mechanism

To address the problems of weak generalization ability and insufficient accuracy of industrial AI models, as well as the low computational efficiency and poor convergence of traditional mechanism models, we will break through key technologies of AI and mechanism fusion at different scales, such as data fusion, algorithm fusion, and graph fusion, to enhance the usability of AI models in industrial applications. At the data level, the process is simulated based on the mechanism model to obtain sample data under extreme or abnormal conditions, which is mixed with the real operation data of the equipment for training to enhance the generalization ability of the model. At the algorithmic level, the accuracy and generalization ability of the model are enhanced by improving the existing deep learning algorithm framework and integrating mechanism model operators, loss functions, etc. In addition, by fusing process graphs for causal inference, the computational scale is reduced and the distraction problem is addressed to enhance the computational efficiency and accuracy of the model. The related technology has been applied in key units of petrochemical and coal chemical industries, with remarkable results.

#### (3) AI-driven intelligent research and development and application of catalysts

Technological breakthroughs in intelligent research and development of catalysts and new materials based on generative databases of physical property data of catalysts and new materials constructed by "AI+ process computing" technology, combined with molecular-level quantitative computing to build explainable "AI+ mechanism" models of catalyst properties, and combined with advanced control technology to create new optimization control methods that touch the core of the process, Intelligent management of catalysts and formulation optimization design at the production facility level. Guided by the "AI+ theoretical catalysis" model, achieve intelligent research and development of catalysts, reduce experimental consumption, accelerate research and development efficiency, and lower research and development costs and thresholds; Combined with the catalyst life prediction algorithm, achieve intelligent catalyst feeding, balance cost and output, and improve efficiency; Combined with the catalyst formulation inversion prediction model, real-time optimization of the catalyst formulation in the industrial production process is achieved, breaking through the bottleneck of process optimization.

#### (4) Advanced control modeling techniques based on deep learning

Reinforcement learning-based pre-trained AI-PID intelligent control modules with parameter adaptation, policy self-optimization and model self-learning capabilities have been developed, which can be used as alternatives or in combination with traditional PID modules. The technology is based on pre-training diverse loop datasets to obtain generalized control parameter adjustment strategies, and combined with real-time feature extraction of closed-loop loop data, it achieves control effects without manual parameter adjustment and automatic adaptation to the characteristics of the controlled object, which helps improve loop debugging efficiency and reduce experience dependence, and is suitable for enterprises of all sizes to improve loop self-control rate, It reduces the impact of the setting process on the smooth production of the device.

#### (5) AI-PID intelligent control technology

An AI-PID intelligent control module based on reinforcement learning inference model has been developed, which has adaptive control parameters, self-optimized policies and self-learning model

capabilities, and can replace traditional PID modules. The technology is based on pre-training diverse loop datasets to obtain generalized control parameter adjustment strategies, combined with real-time feature extraction of closed-loop loop data, achieving control effects without manual parameter adjustment and automatic adaptation to the characteristics of the controlled object, which helps to improve loop debugging efficiency and reduce empirical dependence. It currently supports UCS and OMC control systems and has been put into production application. It is suitable for enterprises of all sizes to enhance the automatic control rate of the loop and facilitate the smooth production of the equipment.

#### (6) Open Automation Universal Control System architecture technology

UCS addresses the three major challenges of "data, computing power, and model" for control systems in the AI era, with typical features such as software-defined, fully digital, and cloud-native, based on a new minimalist architecture control system consisting of control data centers, all-optical deterministic networks, and intelligent devices. It provides rich and high-quality industrial big data for industrial AI applications through the combination of Ethernet-APL technology, intelligent instruments, flat architecture of fully networked communication, and multimodal sensing technology. UCS brings high computing power to control systems by adopting cloud-native architecture and software-defined technologies; Innovative development of NyxOS, an industrial cloud real-time operating system based on containerized design, ensures high availability and fault tolerance of control systems. UCS has been successfully applied in the fields of petrochemical, chemical, oil and gas industries at present.

#### (7) Production error detection and balancing technology

The production balance system helps enterprises build a complete material flow system and grasp the production consumption of the entire plant. Through data coordination and path tracing technology, random errors and errors in production measurement can be effectively eliminated, with error coverage reaching up to 99%. After the singular value decomposition of the balanced constraint matrix, relaxation variables are introduced to solve the quadratic programming problem under linear constraints, and redundant measurement means are used to automatically calculate the object without measurement, achieving the effect of "fewer instruments available, more instruments more accurate" to meet the needs of enterprises of different production scales. Ultimately, the deduction and balance are completed on the premise of absolutely satisfying the balance relationship and satisfying variable constraints as much as possible, with the goal of minimizing deviation.

# (8) Multi-dimensional measurement and control technology for field intelligent instruments based on APL bus

Based on the APL bus technology, the communication capabilities of field instruments have achieved a leapfrog upgrade, completely breaking down the technical barriers of traditional instruments in the process of intelligence and digitalization. By deeply integrating the four core parameters of pressure, temperature, flow and level, and integrating multiple types of sensing sensors such as spectral, vibration, millimeter-wave radar sensing, vision and voiceprint, the technology forms a multi-dimensional, multi-modal and multi-parameter data sensing system. Through flexible and diverse adaptation and combination strategies for different industrial scenarios, deep integration and real-time interaction of cross-dimensional data can be achieved, ultimately building a new generation of field instrument system in the process industry.

The new series of intelligent instruments are highly functional. They not only have efficient multi-parameter transmission capabilities, which can stably and rapidly transmit process real-time data in complex industrial environments, but also have effective analysis capabilities, providing fine data support for production processes. At the same time, it can achieve in-depth diagnosis of the equipment domain, detect potential health problems in a timely manner, and ensure the stable operation of production equipment. In addition, it provides comprehensive assistance for AI applications in upper-level systems, facilitating the intelligent upgrade of process industries through intelligent algorithms and data analysis, and creating greater value for enterprises.

Winners of national science and technology awards

# 2. Research and development achievements obtained during the reporting period

As of June 30, 2025, the company had obtained 738 patents, including 600 invention patents, 107 utility model patents and 31 design patents. It holds 768 Copyrights for computer software. During the reporting period, the company obtained 25 new patents (including 25 invention patents) and 37 new software Copyrights. According to the "Decision of the State Intellectual Property Office on Awarding the 25th China Patent Award" (Guo Zhi Fa Yun Zi [2025] No. 20), the company 'A Model Autonomous Learning Method Applicable to Predictive Control in Process Industry' (Patent No. : ZL202210861856.2) was awarded the "China Patent Award Excellence Award".

#### **Risk Factors**

# 1. Risks of technological upgrades and product updates and iterations

The company faces a dual challenge in the process of technological research and development and iteration: on the one hand, key technologies such as industrial AI and industrial large models are evolving at an accelerated pace with the intelligent upgrade of process industries, and the technological iteration cycle is continuously shortening. Although the company has deepened its technology layout by relying on the "ALL in AI" strategy, focusing on core technologies such as industrial large models, high-quality data training, and robot multimodal perception, the high complexity of technology development and the dynamic changes in market demand pose higher requirements for R&D. If there is a deviation in the judgment of technology direction or a lag in the response to demand, it may lead to a decline in product competitiveness; On the other hand, the deep integration of AI with industrial scenarios involves parallel development of software and hardware (such as training of industrial large models, optimization of robot motion control algorithms, etc.), technical difficulties are interlinked, the R&D cycle is long, and the collaboration difficulty is high. If the research and development progress falls short of expectations due to technical bottlenecks or resource allocation issues, it may affect the market launch rhythm of new products and adversely affect the company's market share and operating performance.

#### 2 The risk of intellectual property rights being infringed and leaked

The intellectual property rights owned by the company, such as patents and software Copyrights, are an important part of the company 's core competitiveness. If the company's intellectual property rights are infringed upon or leaked due to reasons such as the mobility of core technical personnel and poor protection of intellectual property rights, it will weaken the company 's technological advantage to some extent and have an adverse impact on the company's competitiveness.

#### 3 Risk of loss of core talent

The continuous development of the company's business requires a stable group of R&D technical talents, AI talents, management talents, etc., and needs to continuously attract high-quality R&D, product, sales and management talents. Although the company has gradually built a lean and stable core talent team through internal training and external recruitment, and has improved and perfected the talent management system by implementing equity incentives, offering competitive compensation, continuously optimizing the performance appraisal system, shaping the corporate culture, and providing a good working environment, there is still a risk of core talent loss. This could have an adverse impact on the company's technology research and development and the continuous development of its business.

### 4. The risk of intensified market competition

After years of development, the company has taken the leading position in the field of intelligent manufacturing and industrial automation in China. Its distributed control system (DCS) has held the top market share in China for many consecutive years and has established a reliable brand image in the market. At present, industrial AI has risen to become a key driver of intelligent manufacturing and is increasingly becoming a new focus of market competition. In this emerging market of industrial AI, companies face dual competitive pressures from both traditional industrial automation vendors and cross-industry AI vendors. While maintaining its edge in industrial automation, the company needs to accelerate its layout and development in industrial AI, constantly innovate technologies, optimize products, improve services, and respond to market changes in a more flexible and efficient way.

#### 5. Operating risks in overseas markets

Over the years, the company has been actively expanding its overseas market. Currently, its core products and solutions have covered more than 50 countries and regions. Due to the complex and volatile global economic and political situation, conducting business in different countries may involve a series of specific risks, such as political risks, financial risks, sovereign risks, etc., which may have an uncertain impact on the company's operations in the local area. The company will keep a close eye on changes in the political and economic environment of overseas countries, enhance risk prediction, improve risk prevention capabilities, and ensure the achievement of business goals.

### 6. Raw material risks

The current market environment is generally positive, but domestic basic raw material prices are still under upward pressure, which may bring some uncertain impact on the company's cost control. To this end, the company will closely monitor changes in supply and demand and prices in the raw materials market. On the one hand, it will continue to expand the supply channels of raw materials to ensure the diversity of supply sources; On the other hand, the company will enhance the flexibility and timeliness of its purchasing plans and try to avoid and minimize the impact of fluctuations in raw material purchases

#### 7. Industry risks

The risk of cyclical fluctuations in downstream industries. The company 's main intelligent manufacturing solutions mainly serve the pillar industries of the national economy such as chemicals, petrochemicals, and power. The company's operating performance is closely related to the overall development status and prosperity of the downstream industries. The industries such as chemicals, petrochemicals, and power are greatly affected by the national macroeconomic situation and policies. If the development of the downstream industries fluctuates greatly or the industry policies become stricter, It will have an adverse impact on the industry in which the company operates, which may in turn affect the company's future performance.

#### 8. Financial risk

#### (1) The risk that the goods issued have a higher book value at the end of the period

Due to the long operation cycle of the industrial automation and intelligent manufacturing solutions project, the company issued a large amount of goods. Late 2022, late 2023, late 2024 and late June 2025 The book value of goods issued by the company was 2,447,541,700 yuan, 2,559,176,100 yuan, 2,006,972,300 yuan and 2,138,432,000 yuan respectively, accounting for 18.74%, 14.31%, 10.96% and 12.02% of total assets respectively. In the future, with the expansion of sales scale, the amount of goods dispatched may increase further and remain at a high level. If such items are not put into operation in time, on the one hand, it will occupy a large amount of the company's working capital, adversely affecting the company's liquidity; on the other hand, it will also increase the pressure on the company's management and cost control, thereby affecting the company's performance.

#### (2) The risk of uncertainty regarding tax incentives

According to the "Notice of The State Council on Printing and Distributing Several Policies for Promoting High-Quality Development of the Integrated Circuit Industry and Software Industry in the New Era" (Guo Fa [2020] No. 8) and the "Notice of the National Development and Reform Commission and Other Departments on Doing a Good Job in Formulating the List of Integrated Circuit Enterprises or Projects and Software Enterprises Enjoying Tax Preferential Policies in 2025" (Fa Gai Gao Ji [2025]) As well as Announcement No. 10 of 2021 of the Ministry of Industry and Information Technology, the National Development and Reform Commission, the Ministry of Finance and the State Taxation Administration of the People's Republic of China, the company enjoys the preferential policies for enterprise income tax of key software enterprises and pays enterprise income tax at 10% of taxable income for the year 2025.

According to the "Notice on Value-Added Tax Policies for Software Products" (CAI Shui [2011] No. 100) issued by the Ministry of Finance and the State Administration of Taxation, and the "Announcement on Policies Related to Deepening Value-Added Tax Reform" (CAI Shui Guan [2019] No. 39) issued by the Ministry of Finance, the State Administration of Taxation and the General Administration of Customs, The sales revenue of software products of the company and its subsidiaries, Zhejiang Supcon Automation Instrument Co., LTD., Zhejiang Supcon Software Technology Co., Ltd. and Supcon Quanshi Technology (Hangzhou) Co., LTD., shall be calculated and paid at a rate of 13% first. The portion of the actual tax burden exceeding 3% shall be subject to immediate collection and immediate refund policy after review by the competent tax authorities. If there are unforeseeable adverse changes to the tax preferential policies enjoyed by the company in the future, it will have an adverse impact on the company's operating performance.

#### (3) Exchange rate risk

The company's overseas sales are generally settled in US dollars. During the reporting period, there were significant short-term fluctuations in the exchange rate of the RMB against the US dollar, which could affect the company 's product exports and operating performance. The company faced the risk of fluctuations in operating performance due to exchange rate changes.

#### Main operating conditions during the reporting period

The company achieved operating income of 383,0244,500 yuan in the first half of 2025, a decrease of 9.92% compared with the same period of the previous year; Net profit attributable to shareholders of the listed company was 354,082,600 yuan, a decrease of 31.46% compared with the same period of the previous year; Net profit attributable to shareholders of the listed company after deducting non-recurring gains and losses was 288,729,500 yuan, a decrease of 38.86% compared with the same period of the previous year. The company's foreign exchange loss for the current period was 13.3959 million yuan, compared with 3.0057 million yuan in the same period last year; Bank wealth management and interest income for the current period was 73.5455 million yuan, compared with 123.3723 million yuan in the same period last year. Net profit attributable to shareholders of the listed company after excluding the above effects was 293.9329 million yuan, down 25.82% year-on-year.

# (I) Analysis of Main business

# 1. Analysis Table of Changes in Relevant Accounts of Financial Statements

Unit: Yuan Currency: Renminbi

Accounts	Current Issue	Figures for the same	Percentage of
Accounts	Numbers	period last year	change (%)
Operating income	3,830,244,462.48	4,252,171,379.80	-9.92
Operating costs	2,601,492,096.26	2,838,978,369.10	-8.37
Sales expenses	350,736,636.27	344,704,311.46	1.75
Administrative expenses	186,833,487.01	190,586,373.49	-1.97
Financial expenses	-20,680,940.86	-68,379,625.10	Not applicable
Research and development expenses	419,655,039.90	444,254,937.35	-5.54
Net cash flows from operating activities	-559,432,681.54	-419,927,510.36	Not applicable
Net cash flows from investing activities	636,665,347.62	-1,248,240,651.93	Not applicable
Net cash flows from financing activities	-466,835,173.17	-495,198,901.48	Not applicable

Explanation of changes in financial expenses: Mainly due to the year-on-year decrease in interest income and the year-on-year increase in exchange losses for the current period.

Explanation of changes in net cash flows from operating activities: Mainly due to increased payments for the purchase of raw materials by the company.

Explanation of the change in net cash flows from investment activities: Mainly due to the redemption of wealth management products in the current period.

# 2. A detailed account of the significant changes in the company's business type, profit composition or profit source during the current period

Employee stock ownership plan details

1. The company 's first employee stock ownership plan

In April 2019, when the company implemented the first employee stock ownership plan, a total of 382 employees participated, all of whom were employees of the company or its wholly-owned subsidiaries/branches, holding a total of 20,436,563 shares of the employee stock ownership plan, with each share of the employee stock ownership plan corresponding to one share of the company. During the first phase of the employee stock ownership plan, 11 employees withdrew from the plan as required due to their departures. Of the 722,500 exited shares, 540,000 shares were allocated by the Employee Stock ownership Plan management committee to 38 employees on its own initiative, and the remaining 182,500

shares were to be allocated. On June 26, 2023, due to the implementation of the 2022 profit distribution and capital reserve conversion plan, the number of shares held by the first phase of the employee stock ownership plan was changed to 29,633,016 shares. The 29,633,016 shares of the company held by the company 's first employee stock ownership plan were all sold through block trading and secondary market centralized bidding between April 25, 2024 and November 15, 2024. For details, please refer to the "Announcement of SUPCON Technology Co., Ltd. on the Completion of Share Reduction under the 2019 First Employee Stock Ownership Plan" (Announcement No. 2024-075) disclosed by SUPCON Technology co., Ltd. on the website of the Shanghai stock exchange (www.sse.com.cn) and designated media on November 16, 2024.

### 2. The company's second-phase employee stock ownership plan

In September 2019, when the company implemented the second employee stock ownership plan, a total of 466 employees participated, all of whom were employees of the company or its wholly-owned subsidiaries/branches, holding a total of 12 million shares of the employee stock ownership plan, with each share of the employee stock ownership plan corresponding to one share of the company. During the existence of the second phase of the employee stock ownership plan, 16 employees withdrew from the plan as required due to their departure. Of the 350,000 exited shares, 190,000 shares were allocated by the Employee Stock ownership Plan management Committee to 14 employees on its own authority, and the remaining 160,000 shares were to be distributed. On June 26, 2023, due to the implementation of the 2022 annual profit distribution and capital reserve conversion plan, the number of shares held by the second employee stock ownership plan became 17.4 million. The 17.4 million shares of the company held by the company 's second employee stock ownership plan were sold out through block trading and secondary market centralized bidding between April 25, 2024 and June 20, 2024. For details, please refer to the "Announcement of SUPCON Technology Co., Ltd. on the Completion of Share Reduction under the 2019 Second Employee Stock Ownership Plan" (Announcement No. 2024-044) disclosed by SUPCON Technology co., Ltd. on the website of the Shanghai stock exchange (www.sse.com.cn) and designated media on June 21, 2024.

#### Other incentive measures

In 2019, in order to motivate senior executives and core personnel, Chu Jian, the actual controller of the company, transferred 39.5 million shares of the company to Hangzhou Yuancheng Enterprise Management Partnership (Limited Partnership), which he controlled, for the purpose of motivating senior executives and core personnel. Incentive recipients subscribed for the limited partnership shares of Deqing Jiafu Enterprise Management Partnership (Limited Partnership), and Deqing Jiafu Enterprise Management Partnership (Limited Partnership) subscribed for the limited partnership shares of Hangzhou Yuancheng Enterprise Management Partnership (Limited Partnership) The incentive recipients indirectly hold shares in the company through Deqing Jiafu Enterprise Management Partnership (Limited Partnership) and Hangzhou Yuancheng Enterprise Management Partnership (Limited Partnership).

As of the end of the reporting period, 41 incentive recipients of the company, as limited partners of Deqing Jiafu Enterprise Management Partnership (Limited Partnership), contributed a total of 26.5788 million yuan.

Note 1: If I sell my shares in the company within two years after the expiration of the lock-up period, the price of the share sale shall not be lower than the issue price of the company's initial public offering (the issue price shall be adjusted accordingly if the company's shares are subject to dividend distribution, bonus shares, capital reserve conversion into share capital, etc.) during this period.

Note 2: (1) If I fail to fulfill the above commitments, I will publicly explain the specific reasons for not fulfilling the commitments in the company 's general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission and apologize to the other shareholders of the company and to the public investors. If any of the above commitments are violated, the proceeds shall belong to the company. If I fail to fulfill the above commitments and cause the investor to suffer losses in securities trading, I will compensate the investor for the losses in accordance with the law; (2) During the period of my shareholding, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning the locking and reduction of shares change, I am willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 3: If the company's shares held by this enterprise are reduced within two years after the expiration of the lock-up period, the price of the share reduction shall not be lower than the issue price of the company's initial public offering of shares (if the company's shares undergo dividend distribution, bonus shares, capital reserve conversion into share capital or other rights and dividends adjustment during this period, the issue price shall be adjusted accordingly).

Note 4: (1) If the above commitments are not fulfilled, the Company will publicly explain the specific reasons for the failure to fulfill the commitments in the company 's general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission and apologize to the other shareholders of the company and to the public investors. If any of the above commitments are violated, the proceeds shall belong to the company. If the above-mentioned commitments are not fulfilled, resulting in losses suffered by investors in securities trading, the company shall compensate investors for the losses in accordance with the law; (2) During the period of holding shares in the Enterprise, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning share lock-up and reduction change, the enterprise is willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 5: If I reduce my holdings of the Company's shares within 2 years after the expiration of the lock-up period, the price of the share reduction shall not be lower than the issue price of the company 's initial public offering of shares (the issue price shall be adjusted accordingly if the company's shares undergo dividend distribution, bonus shares, capital reserve conversion into share capital, etc.) during this period.

Note 6: (1) After the expiration of the lock-up period of the shares mentioned above, during my tenure as a director/supervisor/senior executive of the issuer, subject to the share lock-up commitment, I shall directly or indirectly transfer no more than 25% of the total shares of the issuer directly or indirectly held by me each year; (2) If I leave office before the expiration of my term, during the term determined at the time of my assumption of office and within six months after the expiration of my term, the following restrictions shall be observed: ① The shares transferred each year shall not exceed 25% of the total number of shares of the issuer directly or indirectly held by me; ② Within six months of leaving office, I shall not transfer any shares of the issuer directly or indirectly held by myself; (3) During my tenure as a director/supervisor/senior executive of the issuer, I will strictly abide by the relevant provisions of laws, regulations and normative documents regarding the shareholding and share changes of directors, supervisors and senior executives, and perform the obligations of directors, supervisors and senior executives in good faith. I will truthfully and promptly declare my direct or indirect holdings in the issuer and any changes thereto. I will not refuse to fulfill the above commitments for reasons such as job change or resignation. I agree to bear and compensate for all losses caused to the issuer and its controlled enterprises as a result of the violation of the above commitments; (4) If I fail to fulfill the above commitments, I will publicly explain the specific reasons for the failure to fulfill the commitments at the general meeting of shareholders of the company and in the newspapers designated by the China Securities Regulatory Commission, and apologize to the other shareholders of the company and the public investors. If any of the above commitments are violated, the proceeds shall belong to the company. If I fail to fulfill the above commitments and cause the investor to suffer losses in securities trading, I will compensate the investor for the losses in accordance with the law; (5) During the period of my shareholding, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning the locking and reduction of shares change, I am willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 7: If I reduce my holdings of the Company's shares within two years after the expiration of the lock-up period, the price of the share reduction shall not be lower than the issue price of the company 's initial public offering of shares (the issue price shall be adjusted accordingly if the company's shares are subject to dividend distribution, bonus shares, capital reserve conversion into share capital, etc.) during this period.

Note 8: (1) After the expiration of the lock-up period of the above-mentioned shares, during my tenure as a director/supervisor/senior executive of the Company, subject to the share lock-up commitment, I shall directly or indirectly transfer no more than 25% of the total number of shares I directly or indirectly hold each year; (2) If I leave office before the end of my term, during the term determined at the time of my assumption of office and within six months after the end of my term, I shall abide by the following restrictions: a. The shares transferred each year shall not exceed 25% of the total number of shares of the company held directly or indirectly by me; b shall not transfer any shares of the company held directly or indirectly by himself within six months of leaving office; (3) During my tenure as a director/supervisor/senior executive of the company, I will strictly abide by the relevant provisions of laws, regulations and normative documents regarding the shareholding and changes of directors, supervisors and senior executives, perform the obligations of directors, supervisors and senior executives in good faith and truthfully and promptly declare the shares I directly or indirectly hold in the company and their changes. I will not refuse to fulfill the above commitments for reasons such as change of position or resignation. I agree to bear and compensate for all losses caused to the company and its controlled enterprises as a result of the violation of the above commitments; (4) If I fail to fulfill the above commitments, I will publicly explain the specific reasons for not fulfilling the commitments in the company 's general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission, and apologize to the other shareholders of the company and to the public investors. If any of the above commitments are violated, the proceeds shall belong to the company. If I fail to fulfill the above commitments and cause the investor to suffer losses in securities trading, I will compensate the investor for the losses in accordance with the law; (5) During the period of my shareholding, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning the locking and reduction of shares change, I am willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 9: Within six months after my departure, I will not transfer or entrust others to manage the shares of the Company that I held directly or indirectly before the issuance, nor will the Company repurchase such shares.

Note 10: Within four years from the expiration of the lock-up period of the shares held, the shares transferred each year shall not exceed 25% of the total number of shares of the company held at the time of listing before the initial public offering, and the reduction ratio may be used cumulatively.

Note 11: (1) If I fail to fulfill the above commitments, I will publicly explain the specific reasons for the failure in the company 's general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission, and apologize to the other shareholders of the company and the public investors. If any of the above commitments are violated, the proceeds shall belong to the company. If I fail to fulfill the above commitments and cause the investor to suffer losses in securities trading, I will compensate the investor for the losses in accordance with the law; (2) During the period of my shareholding, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning the locking and reduction of shares change, I am willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 12: The Company will strictly abide by the relevant provisions of laws, regulations and normative documents regarding shareholders' shareholding and changes in shares (including share reduction), and perform the obligations of shareholders in good faith. During the period of holding shares, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities regarding share lock-up and reduction change, the Company is willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 13: (1) If the above commitments are not fulfilled, the Company will publicly explain the specific reasons for not fulfilling the commitments in the company's general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission and apologize to the other shareholders of the company and the public investors. If any of the above commitments are violated, the proceeds shall belong to the Company. If the above commitments are not fulfilled and the investor suffers losses in securities trading, the Company shall compensate the investor for the losses in accordance with the law; (2) During the period of holding shares in the Company, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning the locking and reduction of shares change, the Company is willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 14:1) If the above commitments are not fulfilled, the Company will publicly explain the specific reasons for the failure to fulfill the commitments in the company 's general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission and apologize to the other shareholders of the company and the public investors. If any of the above commitments are violated, the proceeds shall belong to the Company. If the above commitments are not fulfilled and the investor suffers losses in securities trading, the Company shall compensate the investor for the losses in accordance with the law; (2) During the period of holding shares in the Company, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning the locking and reduction of shares change, the Company is willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 15: (1) If the above commitments are not fulfilled, the partnership will publicly explain the specific reasons for the failure to fulfill the commitments at the general meeting of shareholders of the company and in the newspapers designated by the China Securities Regulatory Commission, and apologize to the other shareholders of the company and the public investors. If any of the above commitments are violated, the proceeds shall belong to the company. If the above-mentioned commitments are not fulfilled, resulting in losses suffered by investors in securities trading, the partnership enterprise shall compensate investors for the losses in accordance with the law; (2) During the period of holding shares in the Partnership, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities concerning share lock-up and reduction change, the Company is willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 16: (1) If the above commitments are not fulfilled, the manager will publicly explain the specific reasons for the failure to fulfill the commitments in the company 's general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission and apologize to the other shareholders of the company and the public investors. If any of the above commitments are violated, the proceeds shall belong to the Company. If the above commitments are not fulfilled, resulting in losses suffered by the investor in securities trading, the administrator shall compensate the investor for the losses in accordance with the law; (2) During the period when the Manager manages the employee stock ownership plan, if there are changes in the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities regulatory authorities.

Note 17: During the holding period of the Company/Partnership Enterprise, if the laws, regulations, normative documents, policies and requirements of the securities regulatory authority concerning share lock-up and reduction change, the Company is willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authority.

Note 18: During my holding period, if there are changes in the laws, regulations, normative documents, policies and requirements of the securities regulatory authorities regarding share lock-up and reduction, I am willing to automatically apply the changed laws, regulations, normative documents, policies and requirements of the securities regulatory authorities.

Note 19: (1) If, after the lock-up period expires, the Company/enterprise/individual intends to reduce their holdings of the company's shares, they will strictly abide by the relevant regulations of the China Securities Regulatory Commission and the stock exchange regarding shareholders' share reduction. In light of the company's needs for stabilizing stock prices, conducting business operations, and capital operations, they will prudently formulate a share reduction plan and gradually reduce their holdings after the lock-up period expires. (2) The Company/enterprise/individual's reduction of shares in the Company shall comply with the provisions of laws and regulations, and the specific methods include but are not limited to the exchange's centralized competitive bidding trading method, block trading method, agreement transfer, etc. (3) The total amount of shares of the Company transferred by the Company/Enterprise/individual within twelve months from the expiration date of the lock-up period shall not exceed the limits of relevant laws, regulations and rules. In the event of the increase in share capital from reserve funds or undistributed profits in the year of the reduction, the base for calculating the total share capital at the end of the previous year shall be adjusted accordingly; (4) Before the Company/Enterprise/individual reduces the shares held by the Company/individual in the Company, the information disclosure obligations shall be fulfilled in a timely and accurate manner in accordance with the Company Law, the Securities Law and the then effective regulations of the regulatory authorities; (5) If the Company/Enterprise/individual fails to fulfill the above-mentioned intention to reduce holdings, the Company/enterprise/individual will publicly explain the specific reasons for the failure to fulfill the commitment at the general meeting of shareholders and in the disclosure media designated by the regulatory authorities, apologize to the shareholders of the Company and the public investors, and bea

Note 20: The Company, the controlling shareholder, the actual controller and the persons acting in concert have made the following commitments regarding the share repurchase in the fraudulent issuance and listing:

- 1. The Company undertakes as follows:
- "(1) We guarantee that there is no fraudulent issuance of our shares in this public offering and listing on the STAR Market.
- (2) If the Company does not meet the conditions for issuance and listing and obtains issuance registration by deceptive means and has already issued and listed, the Company will initiate the share repurchase procedure within five working days after confirmation by the competent authorities such as the China Securities Regulatory Commission to repurchase all the new shares issued by the company in this public offering.
- 2 Controlling shareholders, actual controllers and persons acting in concert

Chu Jian, the controlling shareholder and actual controller of the company, and Hangzhou Yuancheng, a concerted actor, commit as follows:

"(1) We guarantee that there is no fraudulent issuance in the company's current public offering of shares and listing on the STAR Market.

(2) If the Company does not meet the conditions for issuance and listing and obtains issuance registration by deceptive means and has already been issued and listed, I/the enterprise will initiate the share repurchase procedure within five working days after confirmation by the competent authorities such as the China Securities Regulatory Commission to repurchase all the new shares issued by the company in this public offering.

Note 21:1: Measures and commitments of the Company regarding the filling of amortized immediate returns

"To mitigate the impact of the dilution of immediate returns in this public offering, the Company commits to improving asset quality and increasing sales revenue by strengthening the management of the raised funds, accelerating the investment progress of the fundraising projects, intensifying market development, and strengthening the investor return mechanism, thereby thickening future earnings and achieving sustainable development to fill the diluted immediate returns. The company is committed to taking the following specific measures:

(1) Strengthen the management of raised funds

The company has formulated the "Zhejiang Supcon Technology Co., LTD. Management System for Raised Funds", and the raised funds will be deposited in the special account designated by the board of directors after they are in place. The company will regularly inspect the use of the raised funds to strengthen supervision over the fundraising projects and ensure that the raised funds are used reasonably and legally.

(2) Accelerate the investment progress of the fundraising projects

After the funds raised from this offering are in place, the company will allocate its internal resources, accelerate the construction of the fundraising projects, improve the efficiency of the use of the raised funds, strive for the projects to reach full production capacity as soon as possible and achieve the expected benefits, in order to enhance the company's profit level. Before the funds are in place, in order to achieve profitability of the fundraising projects as soon as possible, the company intends to actively raise funds through various channels, actively allocate resources, carry out the preparatory work for the fundraising projects, enhance the talent and technology reserves related to the projects, strive to achieve the expected returns of the projects as soon as possible, enhance shareholder returns in the coming years, and reduce the risk of dilution of immediate returns caused by the issuance.

(3) Increase efforts in market development

Based on the existing sales and service network, the company will improve and expand the global layout of its business operations, and is committed to providing reliable products and high-quality services to more customers around the world. The company will continue to improve and refine its product, technology and service systems, expand the coverage of international and domestic sales channels and service networks, and promote market expansion with first-class technology and services, thereby optimizing its strategic layout in domestic and international markets.

(4) Strengthen the investor return mechanism

The company implements an active profit distribution policy, attaches great importance to providing reasonable investment returns to investors, and maintains continuity and stability. In accordance with the relevant regulations and regulatory requirements of the China Securities Regulatory Commission, the Company has formulated the "Articles of Association (Draft)" applicable after listing, which provides detailed provisions and public commitments regarding the profit distribution policy, and has passed the "Proposal on the Company's Post-Listing Dividend Distribution Policy", fully safeguarding the rights such as asset income enjoyed by shareholders in accordance with the law and enhancing the company's future return capacity.

- (5) If the Company violates the aforementioned commitments, it will promptly announce the facts and reasons for the violation, apologize to the Company 's shareholders and public investors, and make supplementary or alternative commitments to investors to protect their interests as much as possible, except in cases of force majeure or other reasons not attributable to the company. And the supplementary or alternative commitments shall be implemented after the approval of the general meeting of shareholders."
- 2. Commitments by controlling shareholders, actual controllers and concerted actors of the company The controlling shareholder and actual controller of the company, Chu Jian, and the concerted actor, Hangzhou Yuancheng, commit:

- (1) I/the company will not interfere in the company's management activities beyond my authority, nor will I encroach upon the company's interests.
- (2) I/the enterprise will fulfill the measures formulated by the Company to fill the diluted immediate returns and any commitments made by the Company to fill the returns, and if I/the enterprise violates such commitments and causes losses to the Company or investors, I/the enterprise is willing to bear the liability for compensation to the Company or investors in accordance with the law.
- 3 Commitment by all directors and senior management of the Company
- (1) I will not transfer benefits to any other entity or individual without compensation or on unfair terms, nor will I use any other means to harm the interests of the company;
- (2) To restrain my job-related consumption behavior;
- (3) Not to use the company's assets for investment or consumption activities unrelated to the performance of one's duties;
- (4) The remuneration system established by the board of directors or the remuneration committee is linked to the implementation of the company's measures to fill diluted immediate returns;
- (5) If the Company implements an equity incentive plan in the future, the exercise conditions of the future equity incentive plan will be linked to the company 's implementation of measures to fill diluted immediate returns;
- (6) After the China Securities Regulatory Commission or the stock exchange issues separate opinions or detailed implementation rules regarding the measures and commitments to fill the diluted immediate return, if the Company's relevant provisions and my commitments cannot meet those provisions, I undertake to immediately issue supplementary commitments in accordance with those provisions and actively promote the company to make new provisions, To comply with the requirements of the China Securities Regulatory Commission and the stock exchange.

As one of the parties responsible for the measures to fill the return, if I violate or refuse to perform the above commitments, I agree to be subject to relevant penalties or management measures in accordance with the relevant regulations and rules formulated or issued by the China Securities Regulatory Commission, the Shanghai Stock Exchange and other institutions.

Note 22: (1) I/the enterprise and other enterprises controlled by me/the enterprise do not currently engage in business that is the same as or similar to that of Supcon Technology and its holding subsidiaries and has a significant adverse impact on Supcon Technology. (2) I/the enterprise and other enterprises controlled by me/the enterprise will not, in any form (including but not limited to establishment, investment, acquisition, merger, etc.) engage in business that is the same as or similar to and has a material adverse impact on Supcon Technology and its subsidiaries in the future. (3) I/Our enterprise will supervise and restrain the production and business activities of other enterprises that are currently and may be controlled in the future. Provided that there is no competition in the same industry with the company's affiliates, if Supcon Technology and its subsidiaries further expand their product and business scope, I/Our enterprise will fulfill the obligations of actual controller and concerted actor and require other enterprises controlled by me/our enterprise not to compete with the expanded products or business of Supcon Technology and its subsidiaries; In the event that there is a possibility of competition with the expanded products or business of the company, I/the company will fulfill the obligations of the actual controller and the person acting in concert. Require other enterprises controlled by me/our enterprise to withdraw from competition with Supcon Technology and its subsidiaries in the following manner: A. Cease production or operation of products or businesses that constitute competition or may constitute competition; B. Incorporate the competing business into the operation of Supcon Technology and its subsidiaries; C Transfer competing business to an unrelated third party; If other enterprises controlled by me/the enterprise are unable to approve the above request in accordance with their legal decision-making procedures, I/the enterprise may address the potential risk of competition in the same industry by withdrawing the relevant shares. (4) I/I guarantee not to seek for myself or for others business opportunities belonging to Supcon Technology and its subsidiaries, or to operate on my own or for others businesses of the same kind as those of Supcon Technology and its subsidiaries. If a business opportunity obtained from any third party compets with or is likely to compete with the business operated by Supcon Technology and its subsidiaries, I/the enterprise shall immediately notify Supcon Technology and shall facilitate the transfer of such business opportunity to Supcon

Technology or the adoption of any other scheme that may be approved by the regulatory authorities, In order to ultimately exclude the promisor 's actual management and operation rights over the assets/equity/business involved in such business opportunities, thereby avoiding any competition with Supcon technology. (5) I/the enterprise shall not engage in any business or activity that would adversely affect or may adversely affect the normal operation and development of Supcon Technology, and shall not harm the interests of Supcon Technology and other shareholders, including but not limited to: using my/the enterprise 's social and customer resources to impede or restrict the independent development of Supcon Technology; Spreading unfavorable news or information about Supcon technology in society or among customers; Exerting influence by taking advantage of one's or one's own controlling position, causing abnormal changes or fluctuations in the management and R&D personnel of Supcon Technology, which is detrimental to the development of Supcon Technology. (6) If losses are caused to SUPCON Technology and other shareholders by my/our company's violation of the above commitments, I/our company voluntarily assumes the losses caused to SUPCON Technology and other shareholders.

Note 23: (1) As of the date of issuance of this commitment, except for the circumstances already disclosed, I/the enterprise and the enterprises controlled by me/the enterprise have no other significant related transactions with Supcon Technology; (2) I/Our enterprise will not carry out any act that affects the independence of Supcon Technology and will maintain its independence in terms of assets, personnel, finance, business and institutions; (3) I/the enterprise will try to avoid related party transactions with Supcon Technology. For unavoidable related party transactions or transactions, they will be conducted on the basis of equality and voluntariness, in accordance with the principles of fairness, impartiality and equivalent compensation, and the transaction prices will be determined in accordance with the reasonable prices recognized by the market. (4) I/Our company will strictly abide by the recusal provisions regarding related party transactions as stipulated in the articles of association of Supcon Technology. All related party transactions involved will be conducted in accordance with the decision-making procedures for related party transactions of Supcon Technology, and legal procedures will be fulfilled and information on related party transactions will be disclosed in a timely manner; (5) I/the enterprise and the enterprises controlled by me/the enterprise guarantee that they will not use related-party transactions to transfer the profits of SUPCON Technology and will not harm the legitimate rights and interests of SUPCON Technology and other shareholders by influencing SUPCON Technology's business decisions. (6) I/our enterprise and the enterprises controlled by me/our enterprise will not in any way illegally occupy SUPCON Technology's funds or require SUPCON Technology to provide guarantees in violation of regulations.

Note 24: (1) The binding measures for violating the commitment in the prospectus that there are no false records, misleading statements or material omissions. If the Company violates such commitment, the Company will publicly apologize to shareholders and public investors for not fulfilling the above-mentioned measures of repurchasing new shares and compensating for losses in the general meeting of shareholders and in the newspapers designated by the China Securities Regulatory Commission, and compensate investors in accordance with the law, It will also disclose in its periodic reports the fulfillment of its commitments regarding share repurchase and compensation for losses, as well as remedies and corrections in case of failure to fulfill the commitments.

(2) Binding measures in violation of other commitments

If the Company fails to fulfill, is truly unable to fulfill or is unable to fulfill on schedule any other type of commitment it has made for this offering and listing, the Company shall take the following measures: ① The Company shall promptly and fully disclose the specific reasons for the failure to fulfill, the inability to fulfill or the inability to fulfill on schedule and apologize to shareholders and public investors; ② Make supplementary or alternative commitments to investors to protect their legitimate rights and interests as much as possible; ③ Submit the above-mentioned supplementary or alternative commitments to the general meeting of shareholders for consideration; ④ If the company fails to fulfill the relevant commitments and causes losses to investors, the Company shall bear the liability for damages in accordance with the law.

Note 25: The controlling shareholders, actual controllers and concerted actors of the company commit as follows regarding the restraint measures for failure to fulfill the relevant commitments:

I/the company will actively fulfill all commitments made regarding the initial public offering of A-share stocks and listing of Supcon Technology, voluntarily accept the supervision of regulatory authorities, the public and investors, and assume corresponding responsibilities in accordance with the law. If I/Our company fails to fulfill the relevant commitments, I/Our company undertakes to take the following remedies:

- (1) I/The Enterprise shall disclose in a timely and full manner the specific reasons for the failure to perform, the inability to perform or the inability to perform on schedule in the shareholders' meeting and the disclosure media designated by the China Securities Regulatory Commission, and apologize to shareholders and public investors:
- (2) Make supplementary or alternative commitments to investors in order to protect their legitimate rights and interests as much as possible;
- (3) In the event that I/the enterprise has received income as a result of failure to fulfill the commitment, such income shall belong to Supcon Technology;
- (4) Shares of Supcon Technology held directly or indirectly by me/our enterprise shall not be transferred until I/our enterprise fulfills the relevant commitments or makes supplementary or substitute commitments;
- (5) I/Our company shall bear the liability for damages in accordance with the law if I/Our company fails to fulfill the relevant commitments and causes losses to SUPCON Technology and investors.

Note 26: Shareholders holding more than 5% of the shares of the company commit as follows regarding the restraint measures for not fulfilling the relevant commitments:

The Company will actively fulfill all commitments made regarding the initial public offering of A shares of Supcon Technology and its listing on the STAR Market, voluntarily accept supervision from regulatory authorities, the public and investors, and assume corresponding responsibilities in accordance with the law. If the relevant commitments are not fulfilled, the Company undertakes to take the following remedial measures:

- (1) The Company shall promptly and fully disclose in the general meeting of shareholders and the media designated by the China Securities Regulatory Commission the specific reasons for the failure to perform, the inability to perform or the inability to perform on schedule the commitments, and apologize to shareholders and public investors;
- (2) Make supplementary or alternative commitments to investors in order to protect their legitimate rights and interests as much as possible;
- (3) If the Company gains income from failure to fulfill its commitments, such income shall belong to Supcon Technology;
- (4) The shares of SUPCON Technology directly or indirectly held by our company shall not be transferred until our company fulfills the relevant commitments or makes supplementary or alternative commitments.
- (5) The Company shall bear liability for damages in accordance with the law if it fails to fulfill the relevant commitments and causes losses to SUPCON Technology and investors.

Note 27: The directors (non-independent directors), supervisors and senior management of the Company commit as follows regarding the restraint measures for the failure to fulfill the relevant commitments:

I will actively fulfill all commitments I have made regarding this initial public offering and listing, voluntarily accept the supervision of regulatory authorities, the public and investors, and assume corresponding responsibilities in accordance with the law. If I fail to fulfill the relevant commitments, I undertake to take the following remedial measures:

- (1) I shall disclose in a timely and full manner in the shareholders' meeting and in the media designated by the China Securities Regulatory Commission the specific reasons for the failure to perform, the inability to perform or the inability to perform on schedule, and apologize to shareholders and public investors;
- (2) Make supplementary or alternative commitments to investors in order to protect their legitimate rights and interests as much as possible;
- (3) If I receive income from failure to fulfill the commitment, such income shall belong to Supcon Technology;

- (4) I shall cease to receive remuneration, dividends or allowances from Supcon Technology, and shares of Supcon Technology directly or indirectly held by me shall not be transferred until I fulfill the relevant commitments or make supplementary or substitute commitments;
- (5) I shall bear liability for damages in accordance with the law if I fail to fulfill the relevant commitments and cause losses to Supcon Technology and investors.
- Note 28: No loans or any other form of financial assistance, including guarantee for loans, will be provided for incentive recipients to obtain restricted shares under this plan.
- Note 29: If the Company fails to comply with the equity grant or vesting arrangement due to false records, misleading statements or material omissions in the information disclosure documents, the incentive recipients shall return to the company all benefits obtained from the equity incentive plan after the relevant information disclosure documents are confirmed to contain false records, misleading statements or material omissions.
- Note 30: No loan or any other form of financial assistance, including guarantee for the loan, will be provided for the incentive recipients to obtain the relevant rights under this incentive plan. There are no false records, misleading statements or material omissions in the information disclosure documents related to this incentive plan.
- Note 31: If the Company fails to meet the arrangements for granting or exercising benefits due to false records, misleading statements or material omissions in the information disclosure documents, the incentive recipients shall return all benefits obtained under this incentive plan to the Company upon confirmation of false records, misleading statements or material omissions in the relevant information disclosure documents.

Iii. Total Number of Shares	790,591,256	100.00				0	0	790,591,256	100.00

#### 2. Explanation of changes in shares

On January 21, 2025, the second exercise period of the company's 2019 stock option incentive plan saw the sale of restricted shares for trading. The number of restricted shares listed and traded this time was 204, with a lock-up period of 36 months from the date of exercise. The total number of restricted shares corresponding to these restricted share shareholders was 3,971,547. It accounted for 0.50 percent of the company's total share capital at the time of listing. For details, please refer to the "Announcement on the Sale of Shares for the Second Exercise Period of the 2019 Stock Option Incentive Plan of Supcon Technology co., Ltd. for Listing and Circulation" (Announcement No. : 2025-002) published on the website of the Shanghai stock exchange (www.sse.com.cn) on January 11, 2025.

#### 3. The impact of changes in shares from the reporting period to the disclosure date of the semiannual report on financial indicators such as earnings per share and net assets per share (if any)

On July 28, 2025, the share registration procedures for the third vesting period of the Company 's 2021 restricted stock incentive plan were completed, and China Securities Depository and Clearing Corporation Limited Shanghai Branch issued the "Securities Change Registration Certificate", increasing the company's total share capital to 791,189,527 shares. Based on the total share capital of 791,189,527 shares after vesting, earnings per share and net assets per share for the first half of 2025 will remain unchanged, provided that the net profit attributable to shareholders of the listed company remains unchanged.

#### III, Company Profile

#### 1. Company Profile

SUPCON Technology Co., LTD. (hereinafter referred to as "the Company" or "the Company") was formerly known as Zhejiang SUPCON Technology Co., LTD. It was registered with the Administration for Industry and Commerce of Zhejiang Province on December 7, 1999, and its headquarters is located in Hangzhou City, Zhejiang Province. The Company currently holds a business license with the unified social credit code 91330000720082446H. Registered capital of 790,974,712 yuan, total number of shares of 790,974,712 (par value of 1 yuan per share). Shares of the company were listed on the Shanghai Stock Exchange on November 24, 2020, and its GDR was listed on the Swiss Stock Exchange on April 17, 2023.

The Company's control system devices and instruments belong to the instrument manufacturing industry, and its control system embedded software and industrial software belong to the software and information technology services industry. The main business activities are the development, production, sale and technical services of automation main control equipment, fieldbus control systems and instruments and meters; Integration of automation engineering and network engineering projects, technical consultation; Research and development and application of advanced control and optimization technologies; Development, production, sale and maintenance of computers, electronic devices and application software; Sales and technical services of safety instrument-based systems. The products and services provided mainly include: industrial automation and intelligent manufacturing solutions, instrumentation, industrial software, operation and maintenance services, and S2B business, etc.

This financial statement was approved by the Company's 14th board meeting of the 6th term on 29 August 2025 for external release.

#### IV Basis for the preparation of the financial statements

#### 1. Foundation of Preparation

The financial statements of the Company are prepared on a going concern basis.

#### 2. Going concern

The Company has no matters or circumstances that raise significant doubts about its ability to continue as a going concern for the 12 months starting from the end of the reporting period.

# V. Important accounting policies and estimates

Notes on specific accounting policies and estimates:

The Company has developed specific accounting policies and estimates for transactions or events such as impairment of financial instruments, inventory, depreciation of fixed assets, construction in progress, intangible assets, and revenue recognition based on the actual characteristics of its production and operation.

#### 1. Statement of compliance with Accounting Standards for Business Enterprises

The financial statements prepared by the Company comply with the requirements of Accounting Standards for business Enterprises and truly and completely reflect the company 's financial position, operating results, changes in shareholders' equity and cash flows and other relevant information.

#### 2. During the accounting period

The Company 's fiscal year runs from 1 January to 31 December of the Gregorian calendar. The accounting period of this financial statement is from 1 January 2025 to 30 June 2025.

### 3. Business cycle

The operating cycle of the company's business operations is shorter, with 12 months as the standard for dividing the liquidity of assets and liabilities.

### 4. Bookkeeping base currency

The Renminbi is used as the base currency by the Company and its domestic subsidiaries, SUPINCO AUTOMATION PRIVATE LIMITED and SUPCON INTERNATIONAL HOLDING PTE.LTD. Other overseas subsidiaries engaged in overseas operations have chosen the currency of the main economic environment in which they operate as their base currency.

# 5. Method for determining importance criteria and basis for selection

Project	Importance criteria
Important individual accounts receivable for which bad debt provisions are made	The company designates accounts receivable with individual amounts exceeding 0.5% of total assets or more than 20 million yuan as significant accounts receivable.
Bad debt provisions for significant accounts receivable are recovered or reversed	The company recognizes accounts receivable with individual amounts exceeding 0.5% of total assets or more than 20 million yuan as significant accounts receivable bad debt provision recovery or reversal.
Significant write-offs of accounts receivable	The company considers accounts receivable with individual amounts exceeding 0.5% of total assets or more than 20 million yuan as significant write-off accounts receivable.
Important advance payments with an aging of more than one year	The company recognizes prepaid amounts that are more than 0.5% of total assets or more than \$20 million as significant prepaid amounts that are over one year old.
Important construction in progress projects	The company designates construction in progress with individual amounts exceeding 0.5% of total assets as significant construction in progress.
Significant accounts payable with an aging of more than one year	The company recognizes accounts payable with individual amounts exceeding 0.5% of total assets or more than 20 million yuan as significant accounts payable with an aging of over one year.
Significant contract liabilities with an aging of more than one year	The company recognizes contract liabilities with individual amounts exceeding 0.5% of total assets or more than 20 million yuan as significant contract liabilities with an aging of more than one year.
Other significant payables with an aging of more than one year	The Company recognizes other payables with individual amounts exceeding 0.5% of total assets or more than \$20 million as significant other payables with an aging of more than one year.
Important cash flows from investment activities	The company recognizes investment activity flows with an individual amount exceeding 5% of net assets and an amount of more than 200 million yuan as significant investment activity cash flows.
Important subsidiaries, non-wholly-owned subsidiaries	The company designates subsidiaries whose revenue or total profit exceeds 15% of the group's total profit as significant subsidiaries or significant non-wholly-owned subsidiaries.
Important associates	The company recognizes an associated enterprise with a book value of a single long-term equity investment exceeding 5% of its net assets and an amount of more than 200 million yuan as a significant associated enterprise.
Important post-balance sheet events	The company considers post-balance sheet events with individual amounts exceeding 0.5% of total assets as

significant post-balance sheet events.

# 6. Accounting treatment for business combinations under common control and non-common control

#### (1) Accounting treatment for business combinations under common control

Assets and liabilities acquired by the company in a business combination are measured at the book value of the combined party in the consolidated financial statements of the ultimate controlling party as of the combination date. The Company adjusts its capital reserve based on the difference between the book value share of the owners' equity of the combined party in the consolidated financial statements of the ultimate controlling party and the book value of the consideration paid for the combination or the total par value of the issued shares; If the capital reserve is insufficient to cover the shortfall, adjust the retained earnings.

### (2) Accounting treatment for business combinations not under common control

On the acquisition date, the Company recognizes the difference that the cost of the combination is greater than the fair value share of the identifiable net assets of the acquiree obtained in the combination as goodwill; If the cost of combination is less than the fair value share of the identifiable net assets of the acquiree acquired in the combination, the fair value of the identifiable assets, liabilities and contingent liabilities of the acquiree acquired and the measurement of the cost of combination shall be reviewed first. If the cost of combination is still less than the fair value share of the identifiable net assets of the acquiree acquired in the combination after review, the difference shall be recognized in profit or loss for the current period.

### 7. Criteria for control and method of preparation of consolidated financial statements

#### (1) Judgment of control

Having power over the investee, enjoying variable returns by participating in the activities related to the investee, and having the ability to use such power over the investee to influence the amount of variable returns is recognized as control.

# (2) Methods for preparing consolidated financial statements

The parent company incorporates all of its subsidiaries under its control into the consolidation scope of the consolidated financial statements. The consolidated financial statements are based on the financial statements of the parent company and its subsidiaries and are prepared by the parent company in accordance with Accounting Standard for Business Enterprises No. 33 - Consolidated Financial Statements in light of other relevant information.

# 8. Classification of joint arrangements and accounting treatment for joint operations

Not applicable

#### 9. Criteria for determining cash and cash equivalents

Cash presented in the cash flow statement refers to cash on hand and deposits that can be used for payment at any time. Cash equivalents are investments held by enterprises that are short in term, highly liquid, easily convertible to a known amount of cash, and have little risk of change in value.

### 10. Foreign currency transactions and foreign currency statement conversions

#### (1) Translation of foreign currency transactions

Foreign currency transactions are converted to Renminbi amounts at the spot exchange rate on the transaction date at initial recognition. On the balance sheet date, foreign currency monetary items are converted at the spot exchange rate on the balance sheet date. Exchange differences arising from different exchange rates, except for exchange differences related to the principal and interest of foreign currency specific borrocings in connection with the acquisition of assets that meet capitalization conditions, are included in the current period's profit or loss; Foreign currency non-monetary items measured at historical cost are still converted at the spot exchange rate on the transaction date without changing their RMB

amounts; Foreign currency non-monetary items measured at fair value are translated at the spot exchange rate on the date when fair value is determined, and the difference is recognized in profit or loss or other comprehensive income.

(2) Translation of foreign currency financial statements

The items of assets and liabilities in the balance sheet are translated at the spot exchange rate on the balance sheet date; All owner's equity items, except for the "undistributed profits" item, are converted at the spot exchange rate on the transaction date; Revenue and expense items in the income statement are translated at approximate exchange rates of the spot exchange rate on the transaction date. Foreign currency financial statement translation differences resulting from the above translation are included in other comprehensive income.

#### 11. Financial instruments

(1) Classification of financial assets and financial liabilities

Financial assets are classified into the following three categories at initial recognition: 1) Financial assets measured at amortized cost; 2) Financial assets measured at fair value with changes recognized in other comprehensive income; 3) Financial assets measured at fair value with changes recognized in profit or loss.

Financial liabilities are initially recognized into four categories: 1) Financial liabilities measured at fair value with changes recognized in profit or loss for the current period; 2) Financial liabilities arising from the transfer of financial assets not meeting the conditions for derecognition or continuing to be involved in the transferred financial assets; 3) Financial guarantee contracts that do not fall under 1) or 2) above, and loan commitments that do not fall under 1) above and loan at a rate lower than the market rate; 4) Financial liabilities measured at amortized cost.

- (2) Basis for recognition, measurement methods and conditions for derecognition of financial assets and financial liabilities
  - 1) Basis for recognition and initial measurement of financial assets and financial liabilities

When a company becomes a party to a financial instrument contract, it recognizes a financial asset or financial liability. When initially recognizing a financial asset or financial liability, it is measured at fair value; For financial assets and financial liabilities measured at fair value with changes recognized in profit or loss, related transaction costs are directly recognized in profit or loss; For other classes of financial assets or financial liabilities, related transaction costs are included in the initial recognition amount. However, accounts receivable initially recognized by the company that do not contain a significant financing component or that the company does not take into account the financing component in contracts not exceeding one year are initially measured at the transaction price as defined in Accounting Standard for Business Enterprises 14 - Revenue.

- 2) Methods of subsequent measurement of financial assets
- 1 Financial assets measured at amortized cost

Using the effective interest rate method, subsequent measurements are made at amortized cost. Gains or losses arising from financial assets measured at amortized cost and not part of any hedging relationship are recognized in profit or loss for the current period when derecognized, reclassified, amortized on the effective interest rate method, or impairment is recognized.

② Investments in debt instruments measured at fair value with changes recorded in other comprehensive income

Subsequent measurement at fair value. Interest, impairment losses or gains and exchange gains or losses calculated using the effective interest rate method are included in profit or loss for the current period, while other gains or losses are included in other comprehensive income. When derecognized, accumulated gains or losses previously included in other comprehensive income are transferred out of other comprehensive income and included in profit or loss for the current period.

3 Equity instrument investments measured at fair value with changes recorded in other comprehensive income

Subsequent measurement at fair value. Dividends received (except for the portion of investment cost recovery) are included in profit or loss for the current period, while other gains or losses are included in other comprehensive income. When derecognized, accumulated gains or losses previously recorded in other comprehensive income are transferred out of other comprehensive income and recorded in retained earnings.

④ Financial assets measured at fair value with changes recognized in profit or loss

Gains or losses (including interest and dividend income) arising from subsequent measurement at fair value are recognized in profit or loss for the current period, unless the financial asset is part of a hedging relationship.

- 3) Methods of subsequent measurement of financial liabilities
- ① Financial liabilities measured at fair value with changes recognized in profit or loss

Such financial liabilities include trading financial liabilities (including derivatives that are classified as financial liabilities) and financial liabilities designated as measured at fair value with changes recognized in profit or loss. Subsequent measurements of such financial liabilities are made at fair value. Changes in the fair value of financial liabilities designated to be measured at fair value and whose changes are recorded in profit or loss due to changes in the company's own credit risk are recorded in other comprehensive income, unless such changes would cause or expand accounting mismatches in profit or loss. Other gains or losses arising from such financial liabilities (including interest expense, except for changes in fair value resulting from changes in the company's own credit risk) are included in profit or loss for the current period, unless the financial liability is part of a hedging relationship. At derecognition, accumulated gains or losses previously included in other comprehensive income are transferred out of other comprehensive income and included in retained earnings.

② The transfer of financial assets does not meet the conditions for derecognition or continues to be involved in financial liabilities formed by the transferred financial assets

Measure in accordance with Accounting Standard for Business Enterprises No. 23 - Transfer of Financial Assets.

3 Financial guarantee contracts that do not fall under 1 or 2 above, and loan commitments that do not fall under 1 above and loan at a rate lower than the market rate

After initial recognition, subsequent measurements shall be made based on the higher of the following two amounts: the amount of loss provision determined in accordance with the impairment provisions of financial instruments; The balance of the initial recognition amount minus the accumulated amortization amount determined in accordance with Accounting Standard for Business Enterprises 14 - Revenue.

(4) Financial liabilities measured at amortized cost

Measure at amortized cost using the effective interest rate method. Gains or losses arising from financial liabilities measured at amortized cost and not part of any hedging relationship are recognized in profit or loss for the period when derecognized and amortized on the effective interest rate method.

- 4) Derecognition of financial assets and financial liabilities
- ① Financial assets are derecognized when one of the following conditions is met:

The contractual right to receive cash flows from the financial asset has been terminated;

The financial asset has been transferred and the transfer meets the requirements of Accounting Standard for Business Enterprises No. 23 - Transfer of Financial Assets regarding the derecognition of the financial asset.

- ② When the current obligations of a financial liability (or part of it) have been discharged, the corresponding financial liability (or part of the financial liability) is derecognized.
  - (3) Basis for recognition and measurement of transfers of financial assets

Where a company transfers almost all of the risks and rewards associated with ownership of a financial asset, the financial asset shall be derecognized and the rights and obligations arising or retained in the transfer shall be recognized separately as assets or liabilities; Where almost all of the risks and rewards of ownership of a financial asset are retained, continue to recognize the transferred financial asset. Where the company neither transfers nor retains almost all of the risks and rewards of ownership of the financial asset, the following circumstances shall be dealt with: 1) Where control of the financial asset is not retained, the financial asset shall be derecognized and the rights and obligations arising from or retained in the transfer shall be recognized separately as assets or liabilities; 2) If control of the financial asset is retained, the relevant financial asset is recognized to the extent of continued involvement in the transferred financial asset, and the relevant liability is recognized accordingly.

If the overall transfer of financial assets meets the conditions for derecognition, the difference between the following two amounts shall be recognized in profit or loss for the current period: 1) the carrying value of the transferred financial assets on the derecognition date; 2) The sum of the consideration received for the transfer of the financial asset and the amount corresponding to the derecognition portion of the cumulative fair value changes originally directly recognized in other comprehensive income (the financial asset involved in the transfer is a debt instrument investment measured at fair value with changes recognized in other comprehensive income). Where a portion of a financial asset is transferred and the

transferred portion as a whole meets the conditions for derecognization, the carrying value of the entire financial asset before the transfer shall be allocated between the derecognized portion and the continuing recognition portion at their respective fair values on the transfer date, and the difference between the following two amounts shall be recognized in profit or loss: 1) the carrying value of the derecognized portion; 2) The sum of the consideration for the derecognized portion and the amount corresponding to the derecognized portion of the cumulative fair value changes originally directly recognized in other comprehensive income (the financial asset involved in the transfer is an investment in debt instruments measured at fair value with changes recognized in other comprehensive income).

(4) Methods for determining the fair value of financial assets and financial liabilities

The Company uses valuation techniques that are applicable under the current circumstances and supported by sufficient available data and other information to determine the fair value of the relevant financial assets and financial liabilities. The Company classifies the input values used by valuation techniques into the following hierarchies and uses them in sequence:

- 1) The first-level input values are unadjusted quotations of the same asset or liability in an active market available on the measurement date;
- 2) Second-level input values are directly or indirectly observable inputs of related assets or liabilities other than first-level input values, including: quotations of similar assets or liabilities in an active market; Quotations for the same or similar assets or liabilities in an inactive market; Other observable input values other than quotations, such as observable interest rates and yield curves during normal quote intervals; Market-validated input values, etc.
- 3) Level 3 inputs are unobservable inputs of the relevant asset or liability, including interest rates, stock volatility, future cash flows of the obligation to liquidate in a business combination that cannot be directly observed or verified by observable market data, financial forecasts made using its own data, etc.
  - (5) Impairment of financial instruments

The company is based on expected credit losses, Financial assets measured at amortized cost, debt instrument investments measured at fair value with changes recognized in other comprehensive income, contract assets, lease receivables, loan commitments other than financial liabilities classified as measured at fair value with changes recognized in profit or loss, financial liabilities not measured at fair value with changes recognized in profit or loss, or transfers not financial assets Impairment of financial guarantee contracts that do not meet the conditions for derecognition or continue to be involved in financial liabilities formed from the transferred financial assets and loss provisions are recognized.

Expected credit losses refer to the weighted average of credit losses on financial instruments weighted to the risk of default. Credit loss is the difference between all contractual cash flows receivable under the contract and all cash flows expected to be received, discounted at the original effective interest rate, that is, the present value of all cash shortages. Among them, for financial assets that have suffered credit impairment purchased or originated by the company, they are discounted at the credit adjusted effective interest rate of that financial asset.

For purchased or derived financial assets with credit impairment, the Company recognizes only the cumulative changes in expected credit losses over the entire duration from initial recognition as loss provisions on the balance sheet date.

For lease receivables, receivables resulting from transactions regulated by Accounting Standard for Business Enterprises 14 - Revenue, and contract assets, the Company uses a simplified measurement method to measure the loss provision at an amount equivalent to the expected credit loss over the entire duration.

For receivables and contract assets resulting from transactions regulated by Accounting Standard for Business Enterprises 14 - Revenue, the Company uses the simplified measurement method to measure the loss provision at an amount equivalent to the expected credit loss over the entire duration.

For lease receivables and contract assets formed from transactions regulated by Accounting Standard for Business Enterprises 14 - Revenue, which do not contain a significant financing component or which the Company does not take into account the financing component in contracts not exceeding one year, the Company uses the simplified measurement method to measure the loss provision at an amount equivalent to the expected credit loss over the entire duration.

For receivables and contract assets formed by transactions regulated by Accounting Standard for Business Enterprises 14 - Revenue, which do not contain a significant financing component or do not take into account the financing component of contracts not exceeding one year, the Company uses the simplified measurement method to measure the loss provision at an amount equivalent to the expected credit loss over the entire duration.

For financial assets other than those measured by the above methods, the Company assesses on each balance sheet date whether the credit risk has significantly increased since initial recognition. If the credit risk has increased significantly since initial recognition, the company measures the loss provision based on the amount of expected credit losses over the entire duration; If the credit risk has not increased significantly since initial recognition, the Company measures the loss provision at the amount of expected credit loss for the financial instrument over the next 12 months.

The Company uses reasonable and well-grounded information available, including forward-looking information, to determine whether the credit risk of the financial instrument has significantly increased since its initial recognition by comparing the risk of default on the balance sheet date with the risk of default on the initial recognition date.

On the balance sheet date, if the Company determines that the credit risk of the financial instrument is only low, it assumes that the credit risk of the financial instrument has not significantly increased since its initial recognition.

The Company assesses expected credit risk and measures expected credit loss on the basis of individual financial instruments or combinations of financial instruments. When based on a portfolio of financial instruments, the company divides the financial instruments into different portfolios based on common risk characteristics.

The company remeasures expected credit losses on each balance sheet date, and the increase or reversal amount of the resulting loss provision is recognized as an impairment loss or gain in the current period. For financial assets measured at amortized cost, the loss provision offsets the carrying value of the financial asset presented in the balance sheet; For debt investments measured at fair value with changes recorded in other comprehensive income, the company recognizes the loss provision in other comprehensive income without offsetting the carrying amount of the financial asset.

(6) offsetting of financial assets and financial liabilities

Financial assets and financial liabilities are presented separately in the balance sheet and do not offset each other. The Company presents the net amount after offsetting in the balance sheet if both of the following conditions are met: 1) the Company has a legal right to offset recognized amounts and such legal right is currently enforceable; 2) The Company intends to settle on a net basis, or to liquidate the financial asset and settle the financial liability simultaneously.

For transfers of financial assets that do not meet the conditions for derecognition, the Company does not set off the transferred financial assets and related liabilities.

(7) The recognition standards and provision methods for expected credit losses on receivables and contract assets

1) Receivables and contract assets for which expected credit losses are accrued based on credit risk characteristic portfolios

Portfolio Category	The basis for determining combinations	A method for measuring expected credit losses
Notes receivable - Bank acceptance drafts	Acceptor	Based on historical credit loss experience, combined with current conditions and projections of future economic conditions, calculate the expected credit loss rate over the entire duration and calculate the expected credit loss
Accounts receivable - a combination of related transactions within the scope of consolidation	Customer Type	With reference to historical credit loss experience, combined with current conditions and projections of future economic conditions, calculate expected credit losses by default risk exposure and expected credit loss rate over the entire duration
Contract assets - Portfolio of related transactions within the scope of the consolidation	Customer Type	With reference to historical credit loss experience, combined with current conditions and projections of future economic conditions, calculate expected credit losses by default risk exposure and expected credit loss rate over the entire duration
Notes receivable - Commercial acceptance bills Accounts receivable - aging portfolio	Ageing combination	Drawing on historical credit loss experience, combined with the current situation and predictions of future economic conditions, a comparison table of the aging of accounts and the expected credit loss rate throughout the

Contract assets - ageing portfolio		entire existence period is compiled to calculate the expected credit loss
Other receivables - a combination of related transactions within the scope of consolidation	Customer Type	With reference to historical credit loss experience, combined with current conditions and projections of future economic conditions, calculate expected credit losses by default exposure and expected credit loss rates within the next 12 months or over the entire duration
Other receivables - Aging portfolio	Ageing portfolio	With reference to historical credit loss experience, combined with current conditions and projections of future economic conditions, prepare a table of other receivables aging and expected credit loss rates to calculate expected credit losses

2) A table of ageing and expected credit loss rates for the ageing portfolio

			8 81	
Ageing	Accounts receivable Expected credit loss rate (%)	Other receivables Expected credit loss rate (%)	Notes Receivable - Commercial acceptance bills Expected credit loss rate (%)	Contract assets Expected credit loss rate (%)
Within 1 year (inclusive, the same below)	5	5	5	5
1-2 years	10	10	10	10
2-3 years	30	30	30	30
3-4 years	60	60	60	60
More than 4 years	100	100	100	100

Accounts receivable/other receivables/Notes receivable - The aging of commercial acceptance bills/contract assets is calculated from the month in which the payment actually occurred.

3) Criteria for identifying receivables and contract assets for which expected credit losses are accrued on an individual basis

For receivables and contract assets with significantly different credit risks from portfolio credit risks, the company provides for expected credit losses on an individual basis.

### 12. Notes receivable

# Portfolio category and basis for bad debt provision based on credit risk characteristics

The general model of expected credit loss for notes receivable by the Company is detailed in Note 5, 11. Financial instruments.

# An aging calculation method based on an aging recognition of a combination of credit risk characteristics

The general model of expected credit loss for notes receivable by the Company is detailed in Note 5, 11. Financial instruments.

# In accordance with the individual provision judgment criteria for bad debts Not applicable

#### 13. Accounts receivable

#### Portfolio category and basis for bad debt provision based on credit risk profile portfolio

The general model of expected credit losses used by the Company for accounts receivable is detailed in Note 5, 11. Financial instruments.

# An aging calculation method based on an aging recognition of a combination of credit risk characteristics

The general model of expected credit loss for accounts receivable of the Company is detailed in Note 5, 11. Financial instruments.

# In accordance with the criteria for determining bad debt provisions for individual items

For receivables and contract assets with significantly different credit risks from portfolio credit risks, the company provides for expected credit losses on an individual basis.

#### 14. Financing of receivables

Portfolio category and basis for bad debt provision based on credit risk profile portfolio Not applicable

# A method for calculating the ageing of credit risk characteristic combinations based on ageing recognition

Not applicable

#### According to the individual provision judgment criteria for bad debts

Not applicable

#### 15. Other receivables

#### Portfolio category and basis for bad debt provision based on credit risk profile portfolio

The general model of expected credit losses for other receivables is detailed in Note 5, 11. Financial instruments.

# An aging calculation method based on an aging recognition of a combination of credit risk characteristics

The general model of expected credit losses adopted by the Company for other receivables is detailed in Note 5, 11. Financial instruments.

# According to the criteria for individual provision for bad debts

Not applicable

#### 16. Inventories

# Inventory category, issue valuation method, inventory system, amortization method for low-value consumables and packaging

1) Classification of inventories

Inventory includes finished products or goods held in the course of daily activities for sale, work-in-progress in production, materials and supplies consumed in production or in the provision of services, etc.

2) The method of valuation for issued inventories

Inventory is issued using the weighted average method at the end of the month.

3) Inventory system

The inventory system is perpetual inventory system.

- 4) Amortization methods for low-value consumables and packaging
- (1) Low-value consumables

Amortize on a one-time write-off basis.

2 Packaging

Amortize on a one-time write-off basis.

#### Recognition criteria and accrual methods for inventory write-down provisions

On the balance sheet date, inventories are measured at the lower of cost and net realizable value, and inventory write-down provisions are made based on the difference between cost and net realizable value. For inventories directly for sale, the net realizable value is determined at the estimated selling price of the inventory minus estimated selling expenses and related taxes and fees in the normal course of production and operation; For inventories that require processing, the net realizable value is determined at the estimated selling price of the finished goods produced, minus the estimated costs to be incurred up to completion, the estimated selling expenses and related taxes; On the balance sheet date, if

a portion of the same inventory has a contract price agreement and the other portion does not have a contract price, the net realizable value is determined separately and compared with the corresponding cost to determine the amount of provision for inventory write-down or reversal.

The combination category and basis for making inventory write-down provisions by combination, and the basis for determining the net realizable value of different categories of inventories Not applicable

The calculation method and determination basis for the net realizable value of inventory based on inventory age for each inventory age portfolio

Not applicable

#### 17. Contract assets

#### Methods and criteria for recognizing contract assets

The general model of expected credit losses used by the Company for contract assets is detailed in Note 5, 11. Financial instruments.

#### Portfolio categories and basis for bad debt provision based on credit risk characteristics

The general model of expected credit losses adopted by the Company for contract assets is detailed in Note 5, 11. Financial instruments.

# An aging calculation method based on an aging recognition of a combination of credit risk characteristics

The general model of expected credit loss for contract assets is detailed in Note 5, 11. Financial instruments.

# In accordance with the criteria for determining bad debt provisions for individual items

The general model of expected credit loss for contract assets of the Company is detailed in Note 5, 11. Financial instruments.

#### 18. A non-current asset or disposal group held for sale

(1) Classification of non-current assets or disposal groups held for sale

The Company classifies non-current assets or disposal groups that simultaneously meet the following conditions as held for sale: 1) in accordance with the practice of selling such assets or disposal groups in similar transactions, they can be sold immediately in the current situation; 2) The sale is highly likely to occur, that is, the Company has made a resolution on the sale plan and obtained a definite purchase commitment, and the sale is expected to be completed within one year.

Non-current assets or disposal groups acquired by the company specifically for resale will be classified as held for sale on the acquisition date if they meet the condition that the sale is expected to be completed within one year and are likely to meet other classification conditions of the Held for Sale category in the short term (usually three months).

Where a transaction between non-related parties fails to be completed within one year due to one of the following reasons beyond the Company's control and the Company still commits to selling the non-current asset or disposal group, the non-current asset or disposal group shall continue to be classified as held for sale: 1) The buyer or other party has unintentionally set conditions that cause the sale to be delayed, and the Company has acted promptly in response to these conditions and expects to be able to resolve the delay factors within one year from the date of setting the conditions that cause the sale to be delayed; 2) Due to rare circumstances that prevented the sale of non-current assets or disposal groups held for sale within one year, the Company had taken necessary measures in response to these new circumstances and re-met the classification conditions of the holding for sale category during the initial year.

# Criteria for recognition and accounting treatment of non-current assets or disposal groups classified as held for sale

(1) Initial measurement and subsequent measurement

When the carrying amount of a non-current asset or disposal group held for sale is higher than the net amount of fair value minus selling expenses at the initial measurement and remeasurement on the balance sheet date, the carrying amount is written down to the net amount of fair value minus selling expenses. The amount of the write-down is recognized as an impairment loss on the asset and included in profit or loss for the current period. At the same time, an impairment provision for the asset held for sale is made.

For non-current assets or disposal groups classified as held for sale on the acquisition date, at the time of initial measurement, compare the initial measurement amount assumed not to be classified as held for sale with the net amount of fair value minus selling expenses, measured at the lower of the two. Except for non-current assets or disposal groups acquired in a business combination, the difference arising from the initial measurement amount of the non-current asset or disposal group at fair value minus selling expenses is recognized in profit or loss for the period.

The amount of impairment loss on assets recognized for disposal groups held for sale shall first be offset against the book value of goodwill in the disposal group, and then the book value of each non-current asset in the disposal group shall be offset proportionally according to the proportion of the book value.

Non-current assets held for sale or non-current assets in disposal groups are not subject to depreciation or amortization, and interest and other expenses on liabilities in disposal groups held for sale continue to be recognized.

(2) Accounting treatment for the reversal of asset impairment losses

If the net amount of the fair value of non-current assets held for sale minus selling expenses increases on subsequent balance sheet dates, the previously written amount shall be restored and reversed within the amount of impairment loss recognized after the classification into the holding for sale category, and the reversed amount shall be included in profit or loss for the current period. Impairment losses on assets recognized before the classification into the holding for sale category are not reversed.

If the net amount of the disposal group held for sale on subsequent balance sheet dates increases after deducting the sale expense from the fair value, the previously written amount shall be restored and reversed in the amount of impairment loss on non-current assets recognized after the classification as held for sale, and the reversed amount shall be included in profit or loss for the current period. The book value of goodwill that has been offset and the impairment loss on non-current assets recognized before they were classified as held for sale are not reversed.

The amount of subsequent reversal of impairment losses recognized by disposal groups held for sale shall increase the carrying value of each non-current asset in the disposal group in proportion to the carrying value of each non-current asset other than goodwill.

(3) Accounting treatment that no longer continues to be classified as held for sale and derecognition When a non-current asset or disposal group no longer continues to be classified as a holding for sale or is removed from a holding for sale disposal group due to no longer meeting the classification conditions of the holding for sale category, it shall be measured at the lower of the following: 1) Book value prior to classification as held for sale, adjusted for depreciation, amortization, impairment, etc. that should have been recognized under the assumption not to classify as held for sale; 2) Recoverable amount.

When a non-current asset held for sale or disposal group is derecognized, gains or losses that have not yet been recognized are included in the current period's profit or loss.

#### Criteria and presentation methods for terminating operations

(1) Criteria for confirming termination of business operations

A component that has been disposed of or classified as held for sale and can be distinguished separately is recognized as terminated if one of the following conditions is met:

- 1) The component represents an independent principal business or a separate principal region of operation;
- 2) The component is part of an associated plan for the disposal of an independent primary business or a separate primary operating area;
  - 3) The component is a subsidiary acquired specifically for resale.
  - (2) Presentation method for termination of operations

The Company presents profit or loss from continuing operations and profit or loss from discontinued operations respectively in the income statement. Operating gains or losses such as

impairment losses and reversal amounts from discontinued operations and disposal gains or losses are presented as gains or losses from discontinued operations. For discontinued operations presented in the current period, information that was previously presented as continuing operations gains or losses is represented in the current financial statements as discontinued operations gains or losses for comparable periods. Where a discontinued operation no longer meets the criteria for holding for sale, information that was previously presented as a profit or loss from discontinued operations shall be re-presented in the current financial statements as profit or loss from continuing operations for comparable periods.

#### 19. Long-term equity investments

(1) Judgment on joint control and significant influence

It is determined that there is common control over an arrangement in accordance with the relevant agreement, and that the relevant activities of the arrangement can only be decided with the unanimous consent of the participants who share the control rights. Having the power to participate in decision-making on the financial and operating policies of the investee but not being able to control or jointly control with other parties the formulation of such policies is recognized as having significant influence.

- (2) Determination of the cost of investment
- 1) In the case of a business combination formed under common control, if the combining party pays cash, transfers non-cash assets, assumes debt or issues equity securities as consideration for the combination, on the combination date, the initial investment cost shall be based on the share of the book value of the owners' equity of the combined party in the consolidated financial statements of the ultimate controlling party. The difference between the initial investment cost of a long-term equity investment and the book value of the consideration paid or the total par value of the issued shares is adjusted to the capital reserve; If the capital reserve is insufficient to offset, adjust the retained earnings.

  The company determines whether a long-term equity investment formed by a combination of businesses

The company determines whether a long-term equity investment formed by a combination of businesses under common control through multiple transactions is a "package deal". If it is a "package deal", each transaction is accounted for as one transaction in which control is obtained. If it is not a "package deal", on the consolidation date, the initial investment cost is determined based on the share of the net assets of the combined party in the book value of the consolidated financial statements of the ultimate controlling party after the consolidation. The difference between the initial investment cost of the long-term equity investment on the merger date and the sum of the book value of the long-term equity investment before the merger and the book value of the new consideration for further acquisition of shares on the merger date is adjusted to the capital reserve; If the capital reserve is insufficient to cover the loss, adjust the retained earnings.

2) In the case of a business combination not formed under common control, the fair value of the combination consideration paid shall be taken as the initial investment cost on the acquisition date.

The Company implements long-term equity investments formed in non-common control business combinations through multiple transactions in a stepwise manner, differentiating the individual financial statements from the consolidated financial statements for relevant accounting treatment:

- ① In the individual financial statements, the sum of the book value of the equity investment originally held and the cost of the new investment is taken as the initial investment cost to be accounted for using the cost method.
- ② In consolidated financial statements, determine whether it is a "package deal". If it is a "package transaction", each transaction is accounted for as one transaction in which control is obtained. If it is not a "package deal", the equity in the acquiree held before the purchase date shall be remeasured at the fair value of the equity on the purchase date, and the difference between the fair value and the book value shall be included in the current investment income; If the equity in the acquiree held before the purchase date is related to other comprehensive income accounted for under the equity method, such related other comprehensive income shall be converted into income for the period to which the purchase date belongs. Except for other comprehensive income arising from the remeasurement of net liabilities or changes in net assets of the defined benefit plan by the investee.
- 3) Other than those formed by business combinations: If obtained by payment of cash, the actual purchase price paid shall be regarded as the initial investment cost; In cases where equity securities are issued, the fair value of the issued equity securities shall be taken as the initial investment cost; If acquired through debt restructuring, the initial investment cost shall be determined in accordance with Accounting Standard for Business Enterprises No. 12 Debt restructuring; The initial investment cost

shall be determined in accordance with Accounting Standard for Business Enterprises No. 7 - Non-monetary Asset Exchange.

(3) Methods of subsequent measurement and recognition of profit or loss

Long-term equity investments under control of the investee are accounted for using the cost method; Long-term equity investments in associates and joint ventures are accounted for using the equity method.

- (4) A method of handling investments in subsidiaries that are disposed of step by step through multiple transactions until control is lost
  - 1) Criteria for determining whether it is a "package deal"

Where the equity investment in a subsidiary is disposed of step by step through multiple transactions until control is lost, the company determines whether the stepwise transaction is a "package transaction" by considering the terms of the transaction agreement for each step of the stepwise transaction, the disposal consideration obtained separately, the object of the equity sale, the disposal method, the disposal time point, etc. If the terms, conditions and economic impact of each transaction meet one or more of the following situations, it usually indicates that multiple transactions are a "package deal":

- ① These transactions are made simultaneously or with consideration of each other's effects; Only when these transactions as a whole can a complete business outcome be achieved.
- ③ The occurrence of one transaction depends on the occurrence of at least one other transaction;
- ④ A transaction is uneconomical on its own, but it is economical when considered together with other transactions.
  - 2) Accounting treatments that do not fall under a "package deal"
  - (1) Individual financial statements

The difference between the book value of the disposed equity and the actual proceeds received is recorded in profit or loss for the current period. For the remaining equity interest, if it still has significant influence over the investee or exercises joint control with other parties, it shall be accounted for using the equity method; Where it is no longer possible to exercise control, joint control or significant influence over the investee, accounting shall be carried out in accordance with the relevant provisions of Accounting Standard for Business Enterprises No. 22 - Recognition and Measurement of Financial Instruments.

(2) Consolidated financial statements

Before the loss of control, the difference between the disposal price and the share of the net assets of the subsidiary corresponding to the disposal of the long-term equity investment, which is continuously calculated from the purchase date or the combination date, shall be adjusted to the capital reserve (capital premium), and if the capital premium is insufficient to offset, retained earnings shall be offset.

When control of the subsidiary is lost, the remaining equity is remeasured at its fair value as of the date of loss of control. The difference between the sum of the consideration obtained from the disposal of the equity and the fair value of the remaining equity, minus the share of the net assets of the original subsidiary calculated based on the original shareholding ratio from the purchase date or the merger date, is included in the investment income for the period of loss of control, while the goodwill is written off. Other comprehensive income related to the equity investment in the original subsidiary, etc., shall be converted to current period investment income at the time of loss of control.

- 3) Accounting treatment that constitutes a "package deal"
- (1) Individual financial statements

Account for each transaction as a disposal of a subsidiary and loss of control. However, the difference between the proceeds of each disposal and the book value of the long-term equity investment corresponding to the disposal investment before the loss of control is recognized as other comprehensive income in the individual financial statements and transferred to profit or loss in the period of loss of control when the loss of control occurs.

(2) Consolidated financial statements

Accounting for each transaction as a disposal of a subsidiary and loss of control. However, the difference between the proceeds from each disposal before the loss of control and the share of the net assets of the subsidiary corresponding to the disposal investment is recognized as other comprehensive income in the consolidated financial statements and transferred to profit or loss in the period of loss of control when the loss of control occurs.

#### 20. Investment property

# (1). If the cost measurement model is adopted

Depreciation or amortization methods

- 1) Investment properties include leased land use rights, land use rights held and intended to be transferred after appreciation, and leased buildings.
- 2) Investment properties are initially measured at cost, subsequently measured on the cost model, and depreciated or amortized in the same way as fixed assets and intangible assets.

#### 21. Fixed assets

#### (1). Confirmation of Conditions

Fixed assets refer to tangible assets held for the production of goods, provision of services, rental, or business management, with a useful life of more than one accounting year. Fixed assets are recognized when economic benefits are likely to flow in and costs can be measured reliably.

#### (2). Depreciation method

Category	Depreciation methods	Depreciation period (years)	Residual value rate	Annual depreciation rate
Houses and buildings	Average age method	30-35	5.00%	2.71% - 3.17%
General equipment	Average age method	3-5	5.00%	19.00% - 31.67%
Specialized equipment	Average years method	5-10	5.00%	9.50% - 19.00%
Transport vehicles	Average age method	4-8	5.00%	11.88% - 23.75%

#### 22. Construction in progress

- (1) Construction in progress is recognized when both economic benefits are likely to flow in and costs can be measured reliably. Construction in progress is measured at actual costs incurred before the asset is built to its intended usable state.
- (2) When the construction in progress reaches the intended usable state, it is transferred to fixed assets at the actual cost of the construction. If the project has reached the intended usable state but the final accounts have not been completed, the estimated value shall be transferred to fixed assets first. After the final accounts have been completed, the original provisional estimated value shall be adjusted at the actual cost, but the depreciation already accrued shall not be adjusted.

Class	Criteria and time points for converting construction in progress to fixed assets
Houses and buildings	Upon completion, meet the design requirements or the standards stipulated in the
nouses and buildings	contract and reach the intended usable state.
Canagal aguinment	After installation and commissioning, it should meet the design requirements or the
General equipment	standards stipulated in the contract and reach the predetermined usable state.
Specialized	After installation and commissioning, meet the design requirements or the standards
equipment	stipulated in the contract, and reach the intended usable state.

# 23. Borrowing costs

(1) Recognition principles for capitalization of borrowing costs

Borrowing costs incurred by the company that can be directly attributed to the purchase, construction or production of assets that meet the capitalization conditions shall be capitalized and included in the cost of the relevant assets. Other borrowing costs, when incurred, are recognized as expenses and included in profit or loss for the current period.

(2) Periods for capitalization of borrowing costs

- 1) Borrowing costs are capitalized when both of the following conditions are met: ① Expenditure on assets has occurred; ② Borrowing costs have occurred; ③ The acquisition, construction or production activities necessary to bring the asset to its intended usable or saleable state have begun.
- 2) The capitalization of borrowing costs shall be suspended if there is an abnormal interruption in the process of purchase, construction or production of an asset that meets the capitalization conditions and the interruption lasts for more than three consecutive months; Borrowing costs incurred during the interruption period are recognized as current period expenses until the acquisition, construction or production activities of the asset resume.
- 3) Borrowing costs cease to be capitalized when the assets acquired, constructed or produced that meet the capitalization conditions reach a predetermined usable or saleable state.
  - (3) The capitalization rate of borrowing costs and the amount capitalized

The amount of interest expense actually incurred in the period of the special loan (including amortization of discount or premium as determined by the effective interest rate method) minus interest income from depositing the unutilized loan funds in the bank or investment income from making temporary investments, Determine the amount of interest to be capitalized; Where general borrowings are occupied for the acquisition, construction or production of assets that meet the capitalization conditions, the amount of interest on the general borrowings that should be capitalized shall be calculated by multiplying the weighted average of asset expenditures exceeding the specific borrowings by the capitalization rate of the occupied general borrowings.

# 24. Biological assets

Not applicable

## 25. Oil and gas assets

Not applicable

### 26. Intangible assets

# (1). Useful life and the basis for its determination, estimation, amortization method or review procedure

- 1) Intangible assets, including land use rights, software, patent rights and non-patent technology, are initially measured at cost.
- 2) Intangible assets with a limited useful life are amortized systematically and reasonably over the useful life in accordance with the expected way of realization of the economic benefits associated with the intangible asset. If the expected way of realization cannot be reliably determined, the straight-line method is used for amortization. Specifically as follows:

Item	Service life (years)	Amortization method
Land use rights	50	Straight line method
Software	5-10	Straight line method
Patent rights	10	Straight line method
Non-patented technology	3-5	Straight line method

# (2). The scope of research and development expenditure collection and related accounting treatment methods

#### 1) Personnel labor costs

Personnel labor costs include wages and salaries, basic old-age insurance premiums, basic medical insurance premiums, unemployment insurance premiums, work-related injury insurance premiums, maternity insurance premiums and housing provident fund for the company's R&D personnel, as well as labor costs for external R&D personnel.

Where R&D personnel serve multiple research and development projects simultaneously, the recognition of labor costs shall be based on the working hours records of R&D personnel for each research and development project provided by the company's management department, and shall be allocated proportionally among different research and development projects.

For personnel directly engaged in research and development activities and external R&D personnel engaged in non-research and development activities at the same time, the company shall allocate the actual personnel labor costs incurred by the R&D personnel in different positions by reasonable methods such

as the proportion of actual working hours between research and development expenses and production and operation expenses.

#### 2) Direct input expenses

Direct input expenses refer to the relevant expenditures actually incurred by the company for the implementation of research and development activities. Including: 1) Costs of materials, fuel and power consumed directly; 2) Costs for the development and manufacture of molds and process equipment for intermediate testing and product prototyping; costs for the purchase of samples, prototypes and general testing means that do not constitute fixed assets; and costs for the inspection of prototyping products; 3) Expenses for the operation, maintenance, adjustment, inspection, testing and repair of instruments and equipment used for research and development activities. 4) Rental fees for instruments and equipment leased through operating leases for research and development activities.

#### 3) Depreciation expenses and long-term deferred expenses

Depreciation expenses refer to the depreciation of instruments, equipment and in-use buildings used for research and development activities.

For instruments, equipment and in-use buildings used for research and development activities that are also used for non-research and development activities, it is necessary to keep records of the use of such instruments, equipment and in-use buildings, and to allocate the actual depreciation expenses between research and development expenses and production and operation expenses by reasonable means based on factors such as actual working hours and usable area.

Long-term deferred expenses refer to the long-term deferred expenses incurred during the remodeling, modification, decoration and repair of research and development facilities, which are collected based on actual expenditures and amortized in installments over a prescribed period.

#### 4) Amortization expenses of intangible assets

Amortization of intangible assets refers to the amortization of software, intellectual property rights, non-patent technology (proprietary technology, licenses, designs and calculation methods, etc.) used for research and development activities.

#### 5) Design expenses

Design costs refer to expenses incurred for conceiving, developing and manufacturing new products and new processes, designing processes, technical specifications, procedures, operational characteristics, etc., including expenses related to creative design activities for obtaining innovative, creative and breakthrough products.

#### 6) Equipment commissioning costs and testing costs

Equipment commissioning costs refer to the expenses incurred during research and development activities in the process of tooling preparation, including the expenses incurred for developing special and dedicated production machines, changing production and quality control procedures, or formulating new methods and standards, etc.

The expenses incurred for routine tooling preparation and industrial engineering for large-scale batch and commercial production are not included in the scope of collection.

#### 7) Commissioned external research and development expenses

External research and development expenses refer to the expenses incurred by the company in conducting research and development activities on behalf of other institutions or individuals at home and abroad (the results of the research and development activities are owned by the company and are closely related to the company's main business operations).

# 8) Other expenses

Other expenses refer to expenses directly related to research and development activities other than those mentioned above, including expenses for technical books and materials, translation of materials, expert consultation, high-tech research and development insurance, search, demonstration, review, appraisal and acceptance of research and development achievements, application fees, registration fees, agency fees for intellectual property rights, conference fees, travel expenses, communication fees, etc.

Expenditures incurred during the research stage of an internal research and development project are recorded in the current period's profit or loss at the time of occurrence. Expenditure during the development phase of an internal research and development project is recognized as an intangible asset if the following conditions are met simultaneously: 1) it is technically feasible to complete the intangible asset to make it usable or available for sale; 2) There is an intention to complete the intangible asset and use or sell it; 3) The way in which the intangible asset generates economic benefits, including the ability to prove that the products produced using the intangible asset have a market or that the intangible asset itself has a market, and that the usefulness of the intangible asset will be demonstrated if it is to be used

internally; 4) There are sufficient technical, financial and other resources to support the development of the intangible asset and the ability to use or sell the intangible asset; 5) Expenditures attributable to the development stage of the intangible asset can be reliably measured.

#### 27. Impairment of long-term assets

Estimate the recoverable amount of long-term assets such as long-term equity investments, investment properties measured at cost model, fixed assets, construction in progress, right-of-use assets, and intangible assets with limited useful lives if there are indications of impairment on the balance sheet date. Impairment tests are conducted annually on goodwill formed as a result of business combinations and intangible assets with indefinite useful lives, regardless of whether there are indications of impairment. Goodwill is tested for impairment in combination with its associated asset group or combination of asset groups.

If the recoverable amount of the aforementioned long-term asset is less than its carrying amount, the impairment provision for the asset is recognized based on the difference and included in profit or loss for the current period.

#### 28. Long-term deferred expenses

Long-term deferred expenses account for expenses that have been incurred and have an amortization period of more than one year (excluding one year). Long-term deferred expenses are recorded at their actual amounts and are amortized evenly over the benefit period or the prescribed period. If a long-term deferred expense item does not benefit future accounting periods, the remaining amortized value of the item that has not yet been amortized is transferred to the current period's profit or loss.

#### 29, Contract liabilities

Companies present contract assets or contract liabilities in their balance sheets based on the relationship between the performance of performance obligations and customer payments. The Company presents the contract assets and contract liabilities under the same contract on a net basis after offsetting each other.

The Company presents its right to receive consideration from customers unconditionally (i.e., subject only to the passage of time) as receivables and its right to receive consideration for goods transferred to customers (which is subject to factors other than the passage of time) as contract assets.

The Company presents its obligation to transfer goods to a customer for consideration received or receivable as a contract liability.

### 30. Employee compensation

### (1). Accounting treatment methods for short-term compensation

During the accounting period when an employee provides services to the company, the actual short-term compensation incurred is recognized as a liability and included in the current profit or loss or the cost of the related asset.

#### (2). Accounting treatment for post-employment benefits

Post-employment benefits are divided into defined contribution plans and defined benefit plans.

- 1) During the accounting period when the employee provides services to the company, the amount due for contribution calculated based on the defined contribution plan is recognized as a liability and included in the current profit or loss or the cost of the related asset.
  - 2) Accounting treatment for defined benefit plans typically includes the following steps:
- ① Estimate the relevant demographic and financial variables, etc. using unbiased and consistent actuarial assumptions in accordance with the expected cumulative benefit unit method, measure the obligations arising from the defined benefit plan, and determine the period to which the relevant obligations belong. At the same time, the obligations arising from the defined benefit plan are discounted to determine the present value of the defined benefit plan obligations and the current service cost;
- ② If the defined benefit plan has assets, the deficit or surplus resulting from the present value of the defined benefit plan obligations minus the fair value of the defined benefit plan assets shall be recognized

as a net liability or net asset of the defined benefit plan. Where a defined benefit plan has a surplus, the net asset of the defined benefit plan shall be measured at the lower of the surplus of the defined benefit plan and the upper limit of the assets;

3 At the end of the period, the cost of employee compensation arising from the defined benefit plan is recognized in three parts: service cost, net interest on net liabilities or net assets of the defined benefit plan, and changes resulting from the remeasurement of net liabilities or net assets of the defined benefit plan, where service cost and net interest on net liabilities or net assets of the defined benefit plan are included in the current profit or loss or cost of related assets, Changes resulting from the remeasurement of net liabilities or net assets of defined benefit plans are included in other comprehensive income and are not allowed to be reversed to profit or loss in subsequent accounting periods, but the amounts recognized in other comprehensive income can be transferred within equity.

### (3). Accounting treatment for severance benefits

Severance benefits provided to employees are recognized as employee compensation liabilities arising from severance benefits and included in the current period's profit or loss at the earlier of the following two: 1) when the company cannot unilaterally withdraw severance benefits provided due to a termination of labor relationship plan or a layoff proposal; 2) When the company recognizes costs or expenses related to a restructuring involving the payment of severance benefits.

### (4). Accounting treatment for other long-term employee benefits

Other long-term benefits provided to employees that meet the conditions of a defined contribution plan shall be accounted for in accordance with the relevant provisions of the defined contribution plan; Other long-term benefits shall be accounted for in accordance with the provisions of the defined benefit plan, in order to simplify the relevant accounting treatment, The total net amount of items such as the recognition of employee compensation costs as service costs, net interest on other long-term employee benefits net liabilities or net assets, and changes resulting from the remeasurement of other long-term employee benefits net liabilities or net assets is included in the current profit or loss or the cost of related assets.

#### 31, Estimated liabilities

Not appliable

#### 32, Share-based payments

(1). Types of share-based payments

Including share-based payments settled in equity and share-based payments settled in cash.

- (2). Accounting treatments related to the implementation, modification, and termination of share-based payment schemes
  - 1) Share-based payments settled in equity

Equity-settled share-based payments in exchange for employee services that are immediately exercisable upon grant shall be included in the relevant cost or expense at fair value of the equity instrument on the grant date and the capital reserve shall be adjusted accordingly. For equity-settled share-based payments in exchange for employee services that are exercisable only after the completion of the waiting period or the fulfillment of the specified performance conditions, on each balance sheet date during the waiting period, the services obtained in the current period are included in the relevant cost or expense based on the best estimate of the number of exercisable equity instruments, and the capital reserve is adjusted accordingly at the fair value of the equity instruments on the grant date.

In exchange for equity-settled share-based payments for services provided by other parties, if the fair value of the other party's services can be reliably measured, they shall be measured at the fair value of the other party's services on the date of acquisition; If the fair value of the other party's services cannot be reliably measured but the fair value of the equity instrument can be reliably measured, it shall be measured at the fair value of the equity instrument on the date of service acquisition, included in the relevant cost or expense, and the owner's equity shall be increased accordingly.

2) Share-based payments settled in cash

Cash-settled share-based payments in exchange for employee services that are immediately exercisable upon grant are included in the relevant cost or expense at the fair value of the liability assumed by the company on the grant date, thereby increasing the liability accordingly. Cash-settled share-based payments in exchange for employee services that are exercisable only after the completion of the waiting period or the fulfillment of the specified performance conditions, on each balance sheet date during the waiting period, the services obtained in the current period are included in the relevant cost or expense and corresponding liability at the fair value of the liability assumed by the company, based on the best estimate of the exercisability.

## 3) Modify or terminate the share-based payment plan

If the modification increases the fair value of the equity instrument granted, the Company recognizes the increase in services obtained in accordance with the increase in the fair value of the equity instrument; If the modification increases the number of equity instruments granted, the Company recognizes the fair value of the increased equity instruments as an increase in the acquisition of services accordingly; If the Company modifies the exercisable conditions in a way that benefits the employees, the company considers the modified exercisable conditions when dealing with them.

If the modification reduces the fair value of the equity instrument granted, the Company continues to recognize the amount of services obtained on the basis of the fair value of the equity instrument on the grant date, without taking into account the reduction in the fair value of the equity instrument; If the modification reduces the number of equity instruments granted, the Company will treat the reduced portion as a cancellation of the equity instruments already granted; If the exercisability conditions are modified in a manner unfavorable to the employees, the modified exercisability conditions shall not be taken into account when dealing with the exercisability conditions.

If the Company cancels the granted equity instrument or settles the granted equity instrument during the waiting period (except for cancellations due to non-satisfaction of the exercisability conditions), the cancellation or settlement will be treated as accelerated exercisability and the amount originally recognized during the remaining waiting period will be immediately recognized.

#### 33. Other financial instruments such as preferred stocks and perpetual bonds

Not appliable

#### 34\ Revenue

# (1). Disclose the accounting policies used for revenue recognition and measurement by business type

# 1). Revenue recognition principles

On the contract commencement date, the Company assesses the contract, identifies the individual performance obligations included in the contract, and determines whether each individual performance obligation is to be performed within a certain period or at a certain point in time.

When any of the following conditions is met, it is regarded as fulfilling the performance obligation within a certain period of time; otherwise, it is regarded as fulfilling the performance obligation at a certain point in time: ① The customer acquires and consumes the economic benefits brought by the company's performance at the same time as the company's performance. ② The customer is able to control the goods under construction during the company 's performance process; ③ The goods produced by the Company in the course of performance have an irreplaceable use, and the Company has the right to collect payment for the accumulated performance portion completed to date throughout the contract period.

For performance obligations performed over a certain period of time, the Company recognizes revenue for that period based on the progress of performance. When the progress of performance cannot be reasonably determined and the costs incurred are expected to be compensated, revenue is recognized based on the amount of costs incurred until the progress of performance can be reasonably determined. For performance obligations performed at a certain point in time, revenue is recognized at the point when the customer acquires control of the relevant goods or services. In determining whether the customer has taken control of the goods, the Company considers the following signs: 1) the Company has a current right to receive payment for the goods, that is, the customer has a current obligation to pay for the goods; 2) The company has transferred the legal ownership of the goods to the customer, that is, the customer has physically possessed the goods; 4) The Company has transferred the principal

risk and reward of ownership of the commodity to the customer, that is, the customer has obtained the principal risk and reward of ownership of the commodity; 5) The customer has accepted the commodity; 6) Other indications that the customer has taken control of the goods.

- (2) Revenue measurement principles
- 1) The Company measures revenue based on the transaction price allocated to each individual performance obligation. The transaction price is the amount of consideration that the company expects to be entitled to receive for the transfer of goods or services to a customer, excluding amounts received on behalf of third parties and amounts expected to be returned to the customer.
- 2) Where there is variable consideration in the contract, the Company determines the best estimate of the variable consideration based on the expected value or the most likely amount to occur. However, the transaction price including the variable consideration shall not exceed the amount of the cumulative recognized revenue that is highly unlikely to undergo significant reversal at the time when the relevant uncertainty is eliminated.
- 3) Where there is a significant financing component in the contract, the Company determines the transaction price based on the amount due which the customer is supposed to pay in cash at the time of obtaining control of the goods or services. The difference between the transaction price and the contract consideration is amortized over the contract period using the effective interest rate method. On the contract commencement date, if the Company anticipates that the interval between the customer's acquisition of control of the goods or services and the customer's payment of the price is no more than one year, the significant financing component in the contract shall not be taken into account.
- 4) Where a contract contains two or more performance obligations, the Company shall, on the contract commencement date, allocate the transaction price to each individual performance obligation in proportion to the individual selling price of the goods promised for each individual performance obligation.
  - (3) The specific method of revenue recognition
  - 1) Revenue recognized at a point in time

The company's sale of industrial automation and intelligent manufacturing solutions, instruments and meters, etc. constitutes a performance obligation fulfilled at a certain point in time. Revenue recognition of domestic sales products is subject to the following conditions: For business requiring on-site services, revenue is recognized after the system is fully operational; For businesses that do not require on-site service, revenue is recognized after the products are shipped and signed for by the customer. Export products mainly include general contracting business and direct sales business. General contracting business refers to the sale to overseas customers through domestic general contractors, where the company signs sales contracts with the general contractors and ships the goods to the domestic locations designated by the general contractors as stipulated in the contracts; Direct sales refer to the business of selling directly to overseas customers, where the company signs sales contracts directly with overseas customers and is responsible for the export customs declaration of the goods. Revenue recognition of export products is subject to the following conditions: If on-site service is required in the general contracting business, revenue is recognized after the system is fully operational; Revenue is recognized after the products are shipped and signed for by the customer in general contracting business. Direct sales revenue is recognized after the goods have been shipped, the goods have been declared for export and the bill of lading has been obtained.

The company's sale of products such as industrial software constitutes a performance obligation fulfilled at a certain point in time. The recognition of revenue from industrial software is subject to the following conditions: revenue is recognized after the software goes live.

The company's sale of products such as spare parts and S2B business in operation and maintenance services is a performance obligation fulfilled at a certain point in time. Revenue recognition of domestic sales products is subject to the following conditions: Revenue recognition of domestic sales products is subject to the following conditions: For business that requires on-site service, revenue is recognized after the overall operation of the products is completed; For businesses that do not require on-site service, revenue is recognized after the products are shipped and signed for by the customer. Revenue recognition for export products is subject to the following conditions: revenue is recognized after the products have been shipped, declared for export and the bill of lading has been obtained.

2) Revenue recognized in accordance with progress of performance

The Company sells services such as inspection, upgrade, repair, etc. in operation and maintenance services. Since the company fulfills the contract and the customer acquires and consumes the economic benefits brought by the company 's performance, the company regards it as a performance obligation fulfilled within a certain period and recognizes revenue based on the progress of performance, except

where the progress of performance cannot be reasonably determined. The Company determines the performance progress of the services provided in accordance with the output method. Where the progress of performance cannot be reasonably determined and the costs incurred by the company are expected to be compensated, revenue is recognized based on the amount of costs incurred until the progress of performance can be reasonably determined.

# (2). Different operating models for the same business involve different revenue recognition methods and measurement methods

Not appliable

#### 35. Contract costs

Incremental costs incurred by the company for obtaining a contract that are expected to be recoverable are recognized as an asset as contract acquisition costs. If the amortization period of the contract acquisition cost does not exceed one year, it is directly recognized in the current profit or loss when it occurs. Costs incurred by the company for the performance of a contract are recognized as an asset as contract performance costs if they do not fall within the scope of relevant standards such as inventory, fixed assets or intangible assets and meet the following conditions simultaneously:

- (1) The cost is directly related to a current or expected contract, including direct labor, direct materials, manufacturing costs (or similar costs), costs explicitly borne by the customer, and other costs incurred solely as a result of the contract;
  - (2) The cost increases the resources available to the company for future performance obligations;
  - (3) The cost is expected to be recoverable.

The company amortizes assets related to contract costs on the same basis as the recognition of revenue from goods or services associated with such assets and includes them in the current profit or loss.

If the carrying value of the asset related to the contract cost is higher than the remaining consideration expected to be obtained from the transfer of the goods or services related to the asset minus the estimated cost to be incurred, the company makes an impairment provision for the excess and recognizes it as an impairment loss on the asset. If the factors for impairment in previous periods change and the remaining consideration expected to be obtained from the transfer of goods or services related to the asset minus the estimated cost to be incurred is higher than the book value of the asset, the impairment provision originally made shall be reversed and recorded in profit or loss for the current period. But the book value of the asset after the reversal does not exceed the book value of the asset on the reversal date if no impairment provision is made.

#### 36. Government grants

- (1) Government grants are recognized when the following conditions are met simultaneously: 1) the company is able to meet the conditions attached to the government grant; 2) The company is able to receive the government grant. If the government grant is a monetary asset, it shall be measured at the amount received or receivable. Government grants that are non-monetary assets shall be measured at fair value; Where fair value cannot be reliably obtained, nominal amount shall be measured.
  - (2) The basis for determining and accounting treatment of government grants related to the asset

Government grants provided in government documents for the acquisition, construction or otherwise formation of long-term assets are classified as asset-related government grants. Where the government document does not specify, it shall be judged based on the basic conditions that must be met to obtain the subsidy, and if the basic condition is to acquire, build or otherwise form a long-term asset, it shall be regarded as an asset-related government subsidy. Government grants related to assets are deducted from the book value of the relevant assets or recognized as deferred income. Government grants related to an asset recognized as deferred income are recognized in profit or loss over the useful life of the asset in a reasonable and systematic manner. Government grants measured in nominal amounts are directly recognized in the current period's profit or loss. If the relevant asset is sold, transferred, scrapped or damaged before the end of its useful life, the remaining balance of the relevant deferred income that has not been distributed shall be transferred to the profit or loss of the period in which the asset is disposed.

(3) The basis for determining and accounting treatment of government grants related to the gains Government grants other than those related to assets are classified as government grants related to income. For government grants that contain both asset-related and income-related components and are difficult to distinguish between asset-related and income-related, they are collectively classified as income-related government grants. Government grants related to income, which are used to compensate for related costs, expenses or losses in subsequent periods, are recognized as deferred income and are included in the current profit or loss or offset against related costs during the period when the related costs, expenses or losses are recognized; When used to compensate for incurred related costs, expenses or losses, they are directly recognized in the current period's profit or loss or offset against the related costs.

(4) Government grants related to the day-to-day operations of the company shall be recorded in other income or offset against relevant costs and expenses in accordance with the economic substance of the business. Government grants that are not related to the company's day-to-day activities are recorded as non-operating income and expenses.

#### 37. Deferred income tax assets/deferred income tax liabilities

- (1) The deferred income tax asset or liability is recognized based on the difference between the carrying amount of the asset or liability and its tax base (the difference between the tax base and the carrying amount of an item not recognized as an asset or liability and whose tax base can be determined in accordance with the tax law), at the applicable tax rate for the period expected to recover the asset or settle the liability.
- (2) The recognition of deferred income tax assets is limited to the amount of taxable income that is likely to be obtained to offset deductible temporary differences. On the balance sheet date, if there is conclusive evidence that it is likely that sufficient taxable income will be obtained in future periods to offset deductible temporary differences, deferred income tax assets not recognized in previous accounting periods shall be recognized.
- (3) On the balance sheet date, review the carrying amount of deferred income tax assets and write down the carrying amount of deferred income tax assets if it is unlikely that sufficient taxable income will be available in future periods to offset the benefit of deferred income tax assets. Reverse the amount written down when it is likely that sufficient taxable income will be available.
- (4) The current period income tax and deferred income tax of the company are included in the current period profit or loss as income tax expense or gain, except for income tax arising in the following circumstances: 1) business combination; 2) Transactions or events recognized directly in owners' equity.
- (5) The Company presents deferred income tax assets and deferred income tax liabilities on a net amount after offsetting if the following conditions are met simultaneously: 1) it has a legal right to settle current income tax assets and current income tax liabilities on a net basis; 2) The deferred income tax assets and deferred income tax liabilities are related to income tax levied by the same tax administration department on the same taxpayer or to different taxpayers, but during each future period when the deferred income tax assets and deferred income tax liabilities are reversed, The taxpayers involved intend to settle the current income tax assets and current income tax liabilities on a net basis or to acquire assets and settle debts simultaneously.

### 38, Lease

# It serves as the basis for the lessee's judgment and accounting treatment method for simplifying short-term leases and low-value asset leases

On the lease commencement date, the company considers leases with a term of no more than 12 months and without the option to purchase as short-term leases; Leases with a lower value when the individual leased asset is brand new are classified as low-value asset leases. The original lease is not recognized as a low-value asset lease if the company sublets or anticipates subletting the leased asset. For all short-term leases and leases of low-value assets, the company recognizes lease payments at the cost of the relevant asset or in profit or loss for each period of the lease term on a straight-line basis.

Except for the simplified treatment of short-term leases and low-value asset leases mentioned above, on the commencement date of the lease, the Company recognizes the right-of-use asset and lease liability for the lease.

#### (1) Right-of-use assets

Right-of-use assets are initially measured at cost, which includes: 1) the initial measurement amount of lease liabilities; 2) The amount of lease payments made on or before the commencement date of the lease term, minus the amount related to the lease incentive enjoyed if there is a lease incentive; 3) Initial direct expenses incurred by the lessee; 4) Costs expected to be incurred by the lessee for dismantling and

removing the leased asset, restoring the site where the leased asset is located, or restoring the leased asset to the condition stipulated in the lease terms.

The Company depreciates right-of-use assets on a straight-line basis. If it is reasonable to determine that the company will acquire ownership of the leased asset at the end of the lease term, the company will depreciate the leased asset over its remaining useful life. If it is not reasonably certain that ownership of the leased asset will be obtained at the end of the lease term, the company will depreciate it over the shorter period of the lease term and the remaining useful life of the leased asset.

#### (2) Lease liability

On the commencement date of the lease term, the company recognizes the present value of outstanding lease payments as a lease liability. When calculating the present value of lease payments, the lease embedded rate is used as the discount rate. If the lease embedded rate cannot be determined, the company's incremental borrowing rate is used as the discount rate. The difference between the lease payment amount and its present value is recognized as an unrecognized financing expense, and interest expense is recognized at the discount rate of the present value of the lease payment amount during each period of the lease term and included in the current profit or loss. Variable lease payments not included in the measurement of lease liabilities are recognized in profit or loss when they actually occur.

After the commencement date of the lease term, the Company remeasures the lease liability at the present value of the changed lease payments when there is a change in the actual fixed payment amount, a change in the estimated amount payable for the residual value of the guarantee, a change in the index or ratio used to determine the lease payment amount, a change in the assessment result of the purchase option, renewal option or termination option, or a change in the actual exercise of the option. And adjust the book value of the right-of-use asset accordingly. If the book value of the right-of-use asset has been reduced to zero but the lease liability still needs to be further reduced, the remaining amount is included in the current profit or loss.

#### As the lessor's standard for lease classification and accounting treatment

On the lease commencement date, the company classifies leases that substantially transfer almost all of the risks and rewards associated with ownership of the leased asset as finance leases, and all others as operating leases.

#### (1) Operating lease

During each period of the lease term, the Company recognizes lease receipts as rental income on a straight-line basis, capitalizes the initial direct expenses incurred and appoints them on the same basis as rental income recognition, and recognizes them in installments in the current period's profit or loss. Variable lease payments received by the company in connection with operating leases that are not included in lease receipts are recognized in profit or loss when they actually occur.

#### (2) Finance leases

On the commencement date of the lease term, the Company recognizes the finance lease receivables based on the net investment in the lease (the sum of the unsecured residual value and the present value of the lease receipts not yet received on the commencement date discounted at the embedded interest rate of the lease) and terminates the recognition of the finance lease asset. During each period of the lease, the Company calculates and recognizes interest income based on the lease's embedded interest rate.

Variable lease payments obtained by the company that are not included in the measurement of net lease investments are recognized in the current period's profit or loss when they actually occur.

# 39. Other important accounting policies and accounting estimates

The Singapore subsidiary of the company mainly settles with the counterparty in US dollars. In light of its actual operating conditions and future development plans, in accordance with the relevant provisions of Accounting Standards for business Enterprises, the Company will, as of April 1, 2025, dispose of its wholly-owned Singapore subsidiary SUPCON INTERNATIONAL HOLDING PTE.LTD. And SUPCON INTERNATIONAL BUSINESS PTE.LTD. The base currency was changed from the Singapore dollar to the US dollar; This change in the base currency can reflect the financial position and operating results of the company more truthfully, objectively and fairly, and can provide investors with more reliable and accurate accounting information.

This change is accounted for using the future-applicable method and does not require retroactive adjustment

#### Other Notes

The Company held its 14th meeting of the 6th Board of Directors on 29 August 2025 and approved the motion "Regarding the change of the functional Currency of the Singapore subsidiary", agreeing to change the Singapore wholly-owned subsidiary SUPCON INTERNATIONAL HOLDING PTE.LTD as of 1 April 2025. And SUPCON INTERNATIONAL BUSINESS PTE.LTD. Change the base currency to the US dollar.

#### 2. Tax incentives

- 1. According to the "Notice on Value-Added Tax Policies for Software Products" (CAI Shui [2011] No. 100) issued by the Ministry of Finance and the State Administration of Taxation, and the "Announcement on Relevant Policies for Deepening Value-Added Tax Reform" (CAI Shui Guan [2019] No. 39) issued by the Ministry of Finance, the State Administration of Taxation and the General Administration of Customs, The sales revenue of software products of the company and its subsidiaries, Zhejiang Supcon Automation Instrument Co., LTD., Zhejiang Supcon Software Technology Co., Ltd. and Supcon Quanshi Technology (Hangzhou) Co., LTD., shall be calculated and paid at a rate of 13% first. The portion of the actual tax burden exceeding 3% shall be subject to immediate collection and immediate refund policy after review by the competent tax authorities.
- 2. In accordance with the "Notice of The State Council on Printing and Distributing Several Policies for Promoting High-Quality Development of the Integrated Circuit Industry and Software Industry in the New Era" (Guo Fa [2020] No. 8) and the "Notice of the National Development and Reform Commission and Other Departments on Doing a Good Job in Formulating the List of Integrated Circuit Enterprises or Projects and Software Enterprises Enjoying Tax Preferential Policies in 2025" (Fa Gai Gao Ji [2025]) As well as Announcement No. 10 of 2021 of the Ministry of Industry and Information Technology, the National Development and Reform Commission, the Ministry of Finance and the State Taxation Administration of the People's Republic of China, the company enjoys the preferential policies for enterprise income tax of key software enterprises and pays enterprise income tax at 10% of taxable income for the year 2025.
- 3. According to the Notice of the Zhejiang Provincial Department of Science and Technology on the Filing and Publicity of High-tech Enterprises Recognized by the Zhejiang Provincial Certification Authority in 2022, the subsidiaries Zhejiang Supcon Fluid Technology Co., Ltd. and Supcon Quanshi Technology (Hangzhou) Co., Ltd. have been recognized as high-tech enterprises and shall pay enterprise income tax at a reduced rate of 15% for three years starting from January 1, 2022. It is currently applying for the re-examination of high-tech enterprises, and the enterprise income tax will be provisionally calculated at a rate of 15% for January-June 2025.

According to the "Announcement on the Filing of the First Batch of High-tech Enterprises Recognized by the Beijing Recognition Authority in 2022" by the Office of the National Leading Group for the Administration of High-tech Enterprise Recognition, SUPCON Innovation (Beijing) Energy Technology Co., LTD., a subsidiary, has passed the high-tech enterprise recognition and will pay enterprise income tax at a reduced rate of 15% for three years starting from January 1, 2022. It is currently applying for the re-examination of high-tech enterprises, and the corporate income tax will be provisionally calculated at a rate of 15% for January-June 2025.

According to the announcement of the Zhejiang Provincial Department of Science and Technology on the filing of High-tech Enterprises recognized and filed by the Zhejiang Provincial Certification Authority in 2024, the subsidiary Zhejiang Supcon Sensing Technology Co., Ltd. has been recognized as a high-tech enterprise and will pay enterprise income tax at a reduced rate of 15% for three years starting from December 26, 2024. The applicable enterprise income tax rate for 2025 is 15%.

According to the notice of the Office of the National Leading Group for the Administration of the Recognition of High-tech Enterprises on the proposed filing of High-tech Enterprises recognized and filed

by the Zhejiang Provincial Certification Body in 2023, subsidiaries Zhejiang Supcon Software Technology Co., Ltd. and Zhejiang Supcon Automation Instrument Co., Ltd. have passed the recognition of high-tech enterprises. For three years starting from January 1, 2023, corporate income tax will be paid at a reduced rate of 15%, and the applicable rate for corporate income tax in 2025 will be 15%.

According to the announcement of the National Leading Group Office for the Administration of the Recognition of High-tech Enterprises on the filing of the Fourth Batch of High-tech Enterprises Recognized by the Beijing Recognition Authority in 2023, the subsidiary Bangnengda (Beijing) Industrial Technology Co., Ltd. has been recognized as a high-tech enterprise and will pay enterprise income tax at a reduced rate of 15% for three years starting from January 1, 2023. The applicable corporate income tax rate for the year 2025 is 15%.

4. According to the Announcement of the Ministry of Finance and the State Taxation Administration on Further Implementing Preferential income Tax Policies for Micro and Small Enterprises (CAI Shui [2022] No. 13): From January 1, 2022 to December 31, 2024, for small and micro profit enterprises, the portion of the annual taxable income exceeding 1 million yuan but not exceeding 3 million yuan shall be included in the taxable income at a reduced rate of 25% and subject to enterprise income tax at a rate of 20%. According to the Announcement of the Ministry of Finance and the State Taxation Administration on preferential income tax Policies for small and Micro enterprises and Individual Business Households (CAI Shui [2023] No. 6): From January 1, 2023 to December 31, 2024, for small and micro profit enterprises, the portion of the annual taxable income not exceeding 1 million yuan shall be included in the taxable income at a reduced rate of 25% and subject to enterprise income tax at a rate of 20%. According to the "Announcement of the Ministry of Finance and the State Taxation Administration on Tax and Fee Policies to Further Support the Development of Small and Micro Enterprises and Individual Business Households" (Announcement No. 12 of 2023 of the Ministry of Finance and the State Taxation Administration), the policy of calculating the taxable income of small and micro enterprises at a reduced rate of 25% and paying enterprise income tax at a rate of 20% shall be extended until December 31, 2027. A total of 149 companies, including Hangzhou Baojie Investment Consulting Co., Ltd. and Ningbo Supcon Automation Technology Co., LTD., are enjoying the above-mentioned preferential policies for this period.

Among them, the amount of bad debt provision recovered or reversed in the current period is important: Not appliable

Other notes:

no

#### (6). Actual write-off of notes receivable for the current period

Not appliable

Important notes receivable write-offs:

Not appliable

Notes receivable write-off instructions:

Not appliable

#### Other notes:

Notes receivable of the company include bank acceptance drafts and commercial acceptance drafts, among which the acceptors of bank acceptance drafts include large commercial banks, listed joint-stock banks, and other commercial banks. Based on the principle of prudence, the company classified the acceptors of bank acceptance drafts into six major commercial banks with higher credit ratings, namely Industrial and Commercial Bank of China, Agricultural Bank of China, Bank of China, China Construction Bank, Bank of Communications and Postal Savings Bank of China. Nine listed joint-stock banks, namely China Merchants Bank, Shanghai Pudong Development Bank, China CITIC Bank, China Everbright Bank, Hua Xia Bank, China Minsheng Bank, Ping An Bank, Industrial Bank and Zheshang Bank. The average credit rating includes commercial banks other than those mentioned above. For bank acceptance drafts accepted by commercial banks with a general credit rating and commercial acceptance drafts that are not derecognized upon endorsement or discounting, derecognized upon maturity of the drafts.

#### (8). Other Notes:

The acceptor of a bank acceptance bill is a commercial bank with a high credit standing. The possibility that the bank acceptance bill accepted by it will not be paid upon maturity is relatively low. Therefore, the company terminates the recognition of such bank acceptance bills that have been endorsed or discounted. But if the bill is not paid upon maturity, the company will still bear joint and several liability to the holder in accordance with the provisions of the Bill Law.

### 8. Advance payment

#### (1). Advance payments are presented on an aging basis

Unit: Yuan Currency: RMB

A account aga	Closing balance		Opening balance	
Account age	Amount	Proportion (%)	Amount	Proportion (%)
Within 1 year	275,936,937.84	71.01	250,372,618.12	77.46
1 to 2 years	58,190,178.70	14.97	32,809,100.73	10.15
2 to 3 years	27,370,988.99	7.04	19,010,248.70	5.88
3 to 4 years	19,220,425.04	4.95	15,738,801.04	4.87
More than 4 years	7,890,382.02	2.03	5,315,128.32	1.64
Total	388,608,912.59	100.00	323,245,896.91	100.00

Explanation of the reasons why significant advance payments that are more than one year old have not been settled in a timely manner:

no

# (2). The top five prepayments by the closing balance aggregated by prepayment recipients

Unit: Yuan Currency: RMB

Cint. I dun Currency. Kivi	ם

Others	2,012,532.38	3,852,951.30
Combined	143,718,752.45	128,177,626.75

#### (3). Provision for bad debts

Unit: Yuan Currency: RMB

·	Phase 1	Phase 2	Phase 3	
Bad debt provision	Expected credit losses over the next 12 months	Expected credit losses over the entire duration (no credit impairment)	Expected credit loss over the entire duration (credit impairment has occurred)	Combined
Balance as of 1 January 2025	3,383,357.91	2,617,947.57	17,870,158.43	23,871,463.91
The balance as of January 1, 2025 is in the current period				
- Move on to Phase 2	-1,307,092.85	1,307,092.85		
Move to Phase 3		-2,184,558.06	2,184,558.06	
Go back to Phase 2				
Go back to Phase 1				
Provision for the current period	1,751,050.95	873,703.34	3,078,029.76	5,702,784.05
Back to this issue	-126,800.00			-126,800.00
This issue resold				
Write-off of this period				
Other Changes	-96,442.17			-96,442.17
Balance as of 30 June 2025	3,857,673.84	2,614,185.70	23,132,746.25	29,604,605.79

Basis for stage division and proportion of bad debt provision

The first stage refers to the situation where the credit risk of other receivables has not increased significantly since initial recognition; The second stage is when the credit risk of other receivables has significantly increased since initial recognition but no credit impairment has occurred; The third stage refers to other receivables that have suffered credit impairment.

Explanation of significant changes in the book balance of other receivables with changes in loss provisions for the current period:

Not appliable

The amount of bad debt provision for the current period and the basis for assessing whether the credit risk of financial instruments has significantly increased:

Not appliable

# (4). The situation of bad debt provisions

Unit: Yuan Currency: RMB

		Change in am	Change in amount for the current period					
Category	Opening balance	Business combination s	Provision	Retrieve or turn back	Writ e-off or write -off	Other changes	Closing balance	
Bad debt provisions are made on a portfolio basis	23,871,463.91	-6,604.82	5,702,784.05	126,800.00		-89,837.35	29,604,605.79

#### (2). Consolidation costs and goodwill

Unit: Yuan Currency: RMB

Unit. Tuan Currency. KIVID	T
Consolidation costs	Zhuhai Guanjia Intelligent Technology Partnership
	(Limited Partnership)
Cash	477,212.00
The fair value of non-cash assets	
Fair value of debt issued or assumed	
Fair value of equity securities issued	
Fair value of contingent consideration	
Fair value of equity held before the purchase date as	4,820.32
of the purchase date	
Others	
Combined costs	482,032.32
Minus: Share of the fair value of identifiable net assets	482,032.32
acquired	
The amount of goodwill/consolidation cost less than the	
fair value share of identifiable net assets acquired	

Method for determining the fair value of consolidation costs:

The fair value of the consolidation cost is determined as the sum of the cash assets paid and the fair value of the equity held prior to the acquisition date on the acquisition date.

Fulfillment of performance commitments:

Not appliable

Main reasons for the formation of large goodwill:

Not appliable

Other Notes:

no

#### (3). Assets and liabilities identifiable by the acquiree on the purchase date

Unit: Yuan Currency: RMB

	Zhuhai Guanjia Intelligent Technology Partnership (Limited Partnership)						
	Fair value on the purchase date	Book value on the purchase date					
Assets:	482,612.83	417,971.27					
Monetary funds	1,211.27	1,211.27					
Intangible assets	64,641.56						
Long-term equity investment	416,760.00	416,760.00					
Liabilities:	580.51	580.51					
Payables	580.51	580.51					
Net assets	482,032.32	417,390.76					
Minus: Minority equity							
Net assets acquired	482,032.32	417,390.76					

Method for determining the fair value of identifiable assets and liabilities:

The fair value of identifiable assets and liabilities is determined based on the specific composition of the assets and liabilities of Zhuhai Guanjia Intelligent Technology Partnership Enterprise (Limited Partnership) on the purchase date, in accordance with the transaction price of the company's purchase of equity.

Contingent liabilities assumed by the acquiree in the business combination:

no

Other notes:

no

# (4). Gains or losses arising from the remeasurement of equity held prior to the purchase date at fair value

Whether there were transactions that achieved the business combination step by step through multiple transactions and gained control during the reporting period Not appliable

# (5). A statement that the consideration for the merger or the fair value of assets and liabilities identifiable by the acquiree could not be reasonably determined on the purchase date or at the end of the period of the merger

Not appliable

#### (6). Other Notes

Not appliable

#### 2. Business combinations under common control

Not appliable

# 3. Reverse purchase

Not appliable

# 4. Disposal of subsidiaries

Were there any transactions or events that led to the loss of control of a subsidiary during this period

Onit. Tuan Cu	110110 ) . 111	,,,,										
Subsidiary name	The point in time when control is lost	Disposal price at the point of loss of control	Disposal ratio at the point of loss of control (%)	The handling method at the point when control is lost	The basis for determining the point of loss of control	The difference between the disposal price and the share of the net assets of the subsidiary at the consolidated financial statement level corresponding to the disposal investment	Proportion of remaining equity on the date of loss of control (%)	Book value of the remaining equity at the consolidated financial statement level as of the date of loss of control	Fair value of the remaining equity at the consolidated financial statement level as of the date of loss of control	Remeasure the gains or losses arising from the remaining equity at fair value	Method and main assumptions for determining the fair value of the remaining equity at the consolidated financial statement level on the date of loss of control	The amount of other comprehensive income related to equity investments in the atomic company transferred to investment gains or losses or retained earnings
SUPCON Wind Energy Control Technology (Beijing) Co., LTD	April 15, 2025		33.50	Transfer	Complete the handover procedures and complete the industrial and commercial change registration	-1,756,141.39	33.50	1,756,141.39	3,350,000.00	1,593,858.61	It is determined based on the transaction price of the company's equity transfer	
Tianjin Primet Technology Co., LTD	May 22, 2025		30.30	Transfer	Complete the handover procedures and complete the industrial and commercial change registration	-48,288.32	40.00	63,746.96		-63,746.96	It is determined based on the transaction price of the company's equity transfer

Note that shareholding ratio in a subsidiary is different from voting rights ratio:

1. According to SUPCON HOLDING (THAILAND) CO., LTD. According to the articles of association of the Company, each contribution of the Company represents one vote, and each contribution of the remaining shareholders represents one vote. The Company is through SUPCON Technology (Hong Kong) Limited and Supcon INTERNATIONAL HOLDING PTE.LTD. For SUPCON HOLDING (THAILAND) CO., LTD. The Company contributed 24.5% and 24.5% respectively, with a combined indirect contribution ratio of 49.00% and corresponding voting rights ratio of 90.57%, therefore included in the consolidation scope;

2 With respect to SUPCON TECHNOLOGY (THAILAND) CO., LTD., SUPCON HOLDING (THAILAND) CO., LTD., a subsidiary of our company. And SUPCON INTERNATIONAL HOLDING PTE. LTD. The Company contributes 99.00% and 0.50% respectively. The combined indirect contribution ratio of the company is 49.01%, and the corresponding voting rights ratio is 99.50%. Therefore, it is included in the consolidation scope.

Basis for holding half or less of the voting rights but still controlling the investee, and holding more than half of the voting rights but not controlling the investee: no

For significant structured entities included in the consolidation scope, the basis for control: no

Basis for determining whether a company is an agent or a principal: no

Other notes

no

#### X Risks related to financial instruments

#### 1. Risks to financial instruments

The objective of our risk management is to strike a balance between risk and return, minimize the negative impact of risk on our operating performance, and maximize the interests of shareholders and other equity investors. Based on this risk management objective, the basic strategy of risk management of the Company is to identify and analyze the various risks faced by the Company, establish appropriate risk tolerance lines and conduct risk management, and monitor the various risks in a timely and reliable manner to keep them within a limited range.

The Company faces a variety of risks related to financial instruments in its daily activities, mainly including credit risk, liquidity risk and market risk. Management has reviewed and approved policies to manage these risks, which are summarized as follows.

### (1) Credit risk

Credit risk is the risk that one party to a financial instrument fails to perform its obligations, resulting in financial loss for the other party.

- 1. Credit Risk management practices
- (1) Methods for evaluating credit risk

On each balance sheet date, the company assesses whether the credit risk of the relevant financial instrument has significantly increased since initial recognition. When determining whether credit risk has increased significantly since initial recognition, the company considers obtaining reasonable and well-grounded information, including qualitative and quantitative analysis based on historical data, external credit risk ratings, and forward-looking information, without incuring unnecessary additional costs or efforts. Based on individual financial instruments or combinations of financial instruments with similar credit risk characteristics, the company determines changes in the risk of default over the expected duration of the financial instrument by comparing the risk of default of the financial instrument on the balance sheet date with the risk of default on the initial recognition date.

When one or more of the following quantitative and qualitative criteria are triggered, the Company considers that the credit risk of the financial instrument has increased significantly:

- 1) The quantitative criteria are mainly that the probability of default on the remaining duration of the balance sheet date increases by more than a certain percentage compared to the initial recognition;
- 2) Qualitative criteria mainly include significant adverse changes in the debtor's operating or financial situation, existing or expected changes in the technical, market, economic or legal environment that will have a significant adverse impact on the debtor's ability to repay the company, etc.
  - (2) Definitions of default and assets that have suffered credit impairment

When a financial instrument meets one or more of the following conditions, the company defines the financial asset as having defaulted, with the same criteria as the definition of having credit impairment:

- 1) The debtor is experiencing significant financial difficulties;
- 2) The debtor violates the binding provisions for the debtor in the contract;
- 3) The debtor is very likely to go bankrupt or undergo other financial restructurings;
- 4) The creditor gives concessions that the debtor would not make under any other circumstances for economic or contractual considerations related to the debtor's financial difficulties.
  - 2. Measurement of expected credit losses

Key parameters for measuring expected credit losses include probability of default, default loss rate, and exposure to default risk. The company considers quantitative analysis and forward-looking information of historical statistics (such as counterparty ratings, collateral types and collateral categories, repayment methods, etc.) to establish models of default probability, default loss rate and default exposure.

- 3. The reconciliation statement of the opening and closing balances of the loss provision for financial instruments is detailed in Notes 7, 4 Notes Receivable, 7, 5 Accounts Receivable, 7, 6 Contract Assets and 7, 9 Other Receivables to this financial statement.
  - 4 Credit exposure and concentration of credit risk

The credit risk of the Company mainly comes from monetary funds and receivables. To control the relevant risks mentioned above, the Company has taken the following measures respectively.

#### (1) Monetary funds

Our company deposits its bank deposits and other monetary funds with financial institutions with high credit ratings, so its credit risk is relatively low.

#### (2) Receivables and contract assets

The Company regularly assesses the credit of its clients who conduct transactions on credit basis. Based on the credit assessment results, the Company selects and conducts transactions with recognized and creditworthy customers and monitors their accounts receivable balances to ensure that the Company does not face significant bad debt risks.

As our accounts receivable risk points are distributed among multiple partners and multiple customers, as of June 30, 2025, 12.52% (December 31, 2024:12.38%) of our accounts receivable and contract assets originated from the top five customers in terms of balance, our company has no significant credit concentration risk.

The Company's maximum exposure to credit risk is the carrying value of each financial asset on its balance sheet.

#### (2) Liquidity risk

Liquidity risk refers to the risk that the Company will be short of funds as it fulfills its obligation to settle by the delivery of cash or other financial assets. Liquidity risk may result from the inability to sell financial assets at fair value as soon as possible; Or it may result from the counterparty's inability to repay its contractual obligations; Or due to debts due ahead of schedule; Or due to the inability to generate the expected cash flow.

To control this risk, the Company has employed a combination of various financing methods, including bill settlement and bank borrowing, and has adopted an appropriate combination of long-term and short-term financing methods to optimize the financing structure and maintain a balance between financing continuity and flexibility. The Company has obtained bank credit lines from several commercial banks to meet working capital requirements and capital expenditures.

Financial liabilities are classified by remaining maturity

	Final figures				
Item	Book value	Undiscounted contract amount	Within 1 year	1-3 years	More than 3 years

Other current liabilities	549,475,375.35	549,475,375.35	549,475,375.35		
Lease liabilities	23,550,058.36	25,174,900.67	9,105,478.24	12,119,650.29	3,949,772.14
Little Calculation	5,657,394,060.7 3	5,664,716,609.98	5,648,647,187.5 5	12,119,650.29	3,949,772.14

(3) Market risk

Market risk refers to the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market prices. Market risk mainly includes interest rate risk and foreign exchange risk.

#### 1. Interest rate risk

Interest rate risk is the risk that the fair value of a financial instrument or future cash flows will fluctuate due to changes in market interest rates. Fixed-rate interest-bearing financial instruments expose the Company to fair value interest rate risk, and floating-rate interest-bearing financial instruments expose the company to cash flow interest rate risk. The Company determines the ratio of fixed-rate to floating-rate financial instruments based on market conditions and maintains an appropriate portfolio of financial instruments through regular review and monitoring. The cash flow interest rate risk to the Company is primarily related to the Company's bank borrowings that are interest-bearing at floating rates.

As of June 30, 2025, the Company's bank borrowings at a floating rate of RMB 0.00 (December 31, 2024: RMB 300,000,000.00) would not have a significant impact on the company's total profit and shareholders' equity under the assumption that other variables remain unchanged, assuming an interest rate change of 50 basis points.

#### 2. Foreign exchange risk

Foreign exchange risk refers to the risk that the fair value of a financial instrument or future cash flows will fluctuate due to changes in foreign exchange rates. The risk of exchange rate fluctuations faced by the Company is primarily related to the Company's foreign currency monetary assets and liabilities. With regard to foreign currency assets and liabilities, if there is a short-term imbalance, the Company will buy and sell foreign currencies at market exchange rates as necessary to ensure that net exposure is maintained at an acceptable level.

For details of the Company 's foreign currency monetary assets and liabilities at the end of the period, see Note VII, 81 Foreign currency Monetary items to this financial statement.

## 2. The basis for determining the market value of the first level of fair value measurement items for continuing and non-continuing

Not appliable

3. Qualitative and quantitative information on valuation techniques and key parameters used for fair value measurement items at the second level of continuity and non-continuity

The second-level fair value measurement items held by the Company are funds, and the fair value is calculated by the fund custodian bank in accordance with the valuation model.

4. Qualitative and quantitative information on valuation techniques and key parameters used for ongoing and non-ongoing Level 3 fair value measurement items

The Company's Level 3 fair value measurement items are receivables financing, wealth management products, derivative financial assets and other equity instrument investments. The remaining maturity of receivables financing and wealth management products is relatively short, and the difference between fair value and book value is small. Therefore, their book value is used as fair value; Derivative financial assets are receivables for performance compensation, and their fair value is calculated in accordance with the relevant compensation terms. As of the balance sheet date, the operating conditions of each investee accounted for in other equity instrument investments, as well as the market, economic environment and financial conditions, have not undergone significant changes. Therefore, the Company measures the fair value based on the investment cost as a reasonable estimate.

5. Ongoing Level 3 Fair value measurement items, adjustment information between book value at the beginning and end of the period, and sensitivity analysis of unobservable parameters

Not appliable

6. Ongoing fair value measurement items, the reasons for the conversion between different levels during the current period and the policy for determining the conversion time points

## (3). Provision for bad debts

Unit: Yuan Currency: RMB

	Phase 1	Phase 2	Phase 3	
Bad debt provision	Expected credit losses over the next 12 months	Expected credit loss over the entire duration (no credit impairment occurred)	Expected credit losses over the entire duration (credit impairment has occurred)	Combined
Balance as of 1 January 2025	2,261,581.31	1,579,046.86	12,540,657.50	16,381,285.67
The balance as of January 1,				
2025 is in the current period				
- Move on to Phase 2	-782,872.71	782,872.71		
Move to Phase 3		-675,064.47	675,064.47	
Go back to Phase 2				
Go back to Phase 1				
Provision for the current period	1,212,884.44	-121,109.68	3,041,548.98	4,133,323.74
Back to this issue				
This issue resold				
Write-off of this period				
Other Changes				
Balance as of 30 June 2025	2,691,593.04	1,565,745.42	16,257,270.95	20,514,609.41

Basis for stage division and proportion of bad debt provision

Basis for stage division: Stage 1 refers to the situation where the credit risk of other receivables has not significantly increased since initial recognition; The second stage is when the credit risk of other receivables has significantly increased since initial recognition but no credit impairment has occurred; The third stage refers to other receivables that have suffered credit impairment.

Explanation of the significant changes in the book balance of other receivables with changes in loss provisions in the current period:

Not appliable

The amount of bad debt provision for the current period and the basis for assessing whether the credit risk of financial instruments has increased significantly:

Not appliable

## (4). The situation of bad debt provisions

	J					
Catagomi	Opening	Change in amo	ount for the cu	rrent period		Clasina balansa
Category	balance	Provision	Retrieve or	Write-off or	Other	Closing balance

			turn back	write-off	changes	
Bad debt provisions are made on a portfolio basis	16,381,285.67	4,133,323.74				20,514,609.41
Total	16,381,285.67	4,133,323.74				20,514,609.41

Among them, the amount of bad debt provision reversal or recovery for the current period is important: Not appliable

Other Notes

no

## (5). Other receivables actually written off in the current period

Not appliable

Important write-offs of other receivables:

Not appliable

Notes on write-offs of other receivables:

Not appliable

## (6). Other receivables of the top five in terms of the closing balance collected by the debtor

Unit: Yuan Currency: RMB

Unit Name	Closing balance	Proportion (%) of the total balance of other receivables at the end of the period	Nature of the amounts	Ageing	Bad debt provision closing balance

## XVIII、 Supplementary Information

## 1. Statement of current non-recurring gains and losses

Project	Amount	Notes
Gains or losses from the disposal of illiquid assets, including the		
write-off portion for which impairment provisions for assets have	-2,849,752.95	Vii. 68; 7. 71; 7. 75
been made		
Government subsidies included in the current period's profit and		
loss, except for those closely related to the company's normal		
business operations, in compliance with national policy	44,732,807.00	Vii. 67
regulations, enjoyed in accordance with determined standards, and		
having a continuous impact on the company's profit and loss		
Gains or losses from changes in fair value of financial assets and		
financial liabilities held by non-financial enterprises and gains or		
losses from the disposal of financial assets and financial liabilities,	27,108,380.64	Vii. 68
except for effective hedging activities related to the normal		
business operations of the company		
Occupation fees charged to non-financial enterprises included in		
the current period's profit or loss		
Gains or losses from entrusting others to invest in or manage assets		

Gains or losses from external entrusted loans		
Loss of assets due to force majeure factors such as natural disasters		
Impairment provisions for receivables tested separately are		
reversed	302,250.24	Vii. 5
The cost at which an enterprise acquires an investment in a		
subsidiary, associated or joint venture is less than the income it		
should enjoy from the fair value of the identifiable net assets of		
the investee at the time of acquisition		
The net profit or loss of a subsidiary from the beginning of the		
period to the date of the combination resulting from a business		
combination under common control		
Gains or losses from non-monetary asset exchanges		
Gains or losses from debt restructuring		
One-off expenses incurred by an enterprise due to the cessation of		
related business activities, such as expenses for resettling		
employees, etc		
A one-off impact on the current period's profit or loss due to		
changes in laws and regulations such as taxation and accounting		
A one-time share-based payment expense recognized due to the		
cancellation or modification of the equity incentive plan		
For cash-settled share-based payments, gains or losses arising		
from changes in fair value of employee compensation payable		
after the exercisable date		
Gains or losses from changes in the fair value of investment		
properties that are subsequently measured on the fair value model		
Gains from transactions at prices that are grossly unfair		
Gains or losses arising from contingent matters that are not related		
to the company's normal business operations		
Income from trusteeship fees obtained from entrusted operations		
Other non-operating income and expenses in addition to the above	4,255,073.21	Vii. 74; 7. 75
items	1,233,073.21	VII. 71, 7. 73
Other items of profit or loss that meet the definition of non-		
recurring profit or loss		
Less: Income tax impact	7,607,071.59	
Minority equity impact (after tax)	588,601.81	
Combined	65,353,084.74	

For items not listed in the "Explanatory Announcement No. 1 on Information Disclosure of Companies Offering Securities to the Public - Non-recurring Gains and Losses" by the company that are identified as non-recurring gains and losses items with significant amounts, and items that are defined as recurring gains and losses as listed in the "Explanatory Announcement No. 1 on Information Disclosure of Companies Offering Securities to the Public - Non-recurring Gains and Losses" The reasons should be explained.

Other Notes Not appliable
